Living Wild: Cougars

The flesh-ripping teeth of piranhas, the hammering beaks of woodpeckers, and the defining characteristics of six other fascinating animals are explored in the newest titles in the popular Living Wild series.

Cougar

Early one evening in October 2011, Gail Loveman heard a strange noise coming from outside her house in Boulder, Colorado. She looked through the glass door leading to her backyard—and was shocked by what she saw. There, standing on her porch, was a cougar! Because cougars are solitary animals that avoid contact with humans, it's rare to see a cougar in the wild, and very unusual to see one near a house. In *Cougar: A Cat With Many Names*, kids will go on a real-life adventure with wildlife biologists as they investigate changes in the range of cougars as humans settle in the animals' territories. Along the way, children will learn how these powerful cats hunt for food, raise their young, and adapt to life in mountains, forests, deserts, plains, and wetlands. Large, full-color photos and a dramatic narrative format will keep readers turning the pages.

Cougars

"A look at cougars, including their habitats, physical characteristics such as their tawny coats, behaviors, relationships with humans, and protected status as a game animal in the world today"--

The Cougar Conundrum

The relationship between humans and mountain lions has always been uneasy. A century ago, mountain lions were vilified as a threat to livestock and hunted to the verge of extinction. In recent years, this keystone predator has made a remarkable comeback, but today humans and mountain lions appear destined for a collision course. Its recovery has led to an unexpected conundrum: Do more mountain lions mean they're a threat to humans and domestic animals? Or, are mountain lions still in need of our help and protection as their habitat dwindles and they're forced into the edges and crevices of communities to survive? Mountain lion biologist and expert Mark Elbroch welcomes these tough questions. He dismisses long-held myths about mountain lions and uses groundbreaking science to uncover important new information about their social habits. Elbroch argues that humans and mountain lions can peacefully coexist in close proximity if we ignore uninformed hype and instead arm ourselves with knowledge and common sense. He walks us through the realities of human safety in the presence of mountain lions, livestock safety, competition with hunters for deer and elk, and threats to rare species, dispelling the paranoia with facts and logic. In the last few chapters, he touches on human impacts on mountain lions and the need for a sensible management strategy. The result, he argues, is a win-win for humans, mountain lions, and the ecosystems that depend on keystone predators to keep them in healthy balance. *The Cougar Conundrum* delivers a clear-eyed assessment of a modern wildlife challenge, offering practical advice for wildlife managers, conservationists, hunters, and those in the wildland-urban interface who share their habitat with large predators.

Cougars

Describes the physical characteristics, behavior, and habitat of the members of the cat family known by several names: cougar, puma, mountain lion, and panther.

The Eastern Cougar

The first book to cover the history and current status of the mysterious big cat Investigates the controversial question of whether wild cougars still inhabit the eastern United States Collects written accounts from the settlers who first encountered the animals and includes contributions from leading

figures in the field When European settlers first reached the shores of North America, eastern cougars were plentiful, ranging up and down the coast of the present-day United States. By the beginning of the twentieth century, they had been almost entirely wiped out, victims of the same rapacity and ignorance that decimated wolf and bison numbers elsewhere in the country. Today, the continued existence of wild cougars remains hotly disputed, as do proposals to reintroduce cougars to the East. This groundbreaking anthology brings together accounts of early settlers and explorers, presents pro and con arguments on the wild cougar question, and examines the social and environmental implications of reintroduction. More than just a study of a single animal, this fascinating anthology probes America's troubled history with large predators and makes a vital contribution to the wildlife management debates of today.

The Cougar

The Cougar is a skillful blend of natural history, scientific research, First Nations stories and first person accounts. With her in-depth research, Wild explores the relationship between mountain lions and humans, and provides the most up-to-date information on cougar awareness and defense tactics for those living, working or travelling in cougar country.

Eastern Cougar

The first book to cover the history and current status of the mysterious big cat.

Wild Cats

Cougars

Describes the physical characteristics, hunting methods, and distribution of cougars and their relationship with humans.

Cougars For Kids

Table of Contents Introduction What is a cougar? How do cougars act? What kinds of cougars are there? The history of cougars and humans Cougars and conservation Hybrids of cougars Conclusion Author Bio Publisher Introduction Cougars, also known as mountain lions, are probably one of the best known local predators in the places like the United States of America. As one of the very few big cats in North America, the cougar sort of inhabits a special place in American and other cultures. It has no special markings; it's mostly its size that sets it apart from other cats for those who live around it. The cougar is not necessarily loved where it lives, but certainly fulfills an important part of its ecosystem.

Cougar Crossing

Discover the amazing true story of P-22, the wild cougar living in Los Angeles, in this inspiring picture book. P-22, the famed "Hollywood Cougar," was born in a national park near Los Angeles, California. When it was time for him to leave home and stake a claim to his own territory, he embarked on a perilous journey—somehow crossing sixteen lanes of the world's worst traffic—to make his home in LA's Griffith Park, overlooking the famed Hollywood sign. But Griffith Park is a tiny territory for a mountain lion, and P-22's life has been filled with struggles. Residents of Los Angeles have embraced this brave cougar as their own and, along with the scientists monitoring P-22, raised money to build a wildlife bridge across Highway 101 to help cougars and other wildlife safely expand their territories and build new homes—ensuring their survival for years to come.

Wild Cats

For use in schools and libraries only. Introduces the three types of wild cat that live in North America, and discusses their habitat, diet, anatomy, life cycles, and behavior.

The Cougar Doesn't Live Here Any More

The present book considers in the broadest possible perspective, everything related to the rise and extinction of animal species.

Soul Among Lions

Skilled predators prized by hunters and cursed by ranchers, mountain lions are the wild soul of the American West. Now a wildlife biologist brings you nose to nose with the elusive cougar. Harley Shaw shares dramatic stories culled from his years of studying mountain lions, separating fact from myth regarding their habits while raising serious questions about mankind's relationship with this commanding creature. "Most of us move into the country because we love wildlife," writes Shaw. "But none of us will tolerate having our pets or children eaten. . . . When lion/human encounters occur, the lion (or bear, or wolf) always ultimately loses." Soul among Lions offers us a chance to consider the true meaning of that loss.

Small Wild Cats

Did you know that most wild cat species are small and that lions, tigers, and other large cats are the exception? That adult bobcats, clouded leopards, and other small wild cats are completely asocial? And that they fight only as a last resort? This entertaining and informative book reveals these and hundreds of other facts about the behavior, biology, and conservation of the more than 30 small wild cat species. From bobcats to servals, small cats are spread across the globe. They range in size from the rusty-spotted cat and African black-footed cat, each of which weighs around 5 pounds when fully grown, to the Eurasian lynx, which can reach an adult weight of 60 pounds. These felids are elusive, some are nocturnal, others are arboreal, and all are rare and secretive, making them especially difficult to study. James G. Sanderson, the world's leading field expert on small wild cats, and naturalist and wildlife artist Patrick Watson provide informative and entertaining answers to common and unexpected questions about these animals. The authors explain why some small cats live on the ground while others inhabit trees, discuss the form and function of their coat types and colors, offer scientifically sound information on human–small wild cat interactions, and even review the role that small wild cats have played in literature, religion, and mythology. The world of cats is as fascinating as it is diverse. Small Wild Cats: The Animal Answer Guide shows just how important and interesting the littlest of the nondomesticated feline family are.

Living in the Wild: Big Cats

The Sea Wolves sets out to disprove the notion of "the Big Bad Wolf," especially as it is applied to coastal wolves—a unique strain of wolf that lives in the rainforest along the Pacific coast of Canada. Genetically distinct from their inland cousins and from wolves in any other part of the world, coastal wolves can swim like otters and fish like the bears with whom they share the rainforest. Smaller than the gray wolves that live on the other side of the Coast Mountains, these wolves are highly social and fiercely intelligent creatures. Living in the isolated wilderness of the Great Bear Rainforest, coastal wolves

have also enjoyed a unique relationship with man. The First Nations people, who have shared their territory for thousands of years, do not see them as a nuisance species but instead have long offered the wolf a place of respect and admiration within their culture. Illustrated with almost one hundred of Ian McAllister's magnificent photographs, *The Sea Wolves* presents a strong case for the importance of preserving the Great Bear Rainforest for the wolves, the bears and the other unique creatures that live there.

The Sea Wolves

Discusses the genetic ancestors of wild cats and presents information on the physical characteristics, behavior, habitat, and threats to different kinds of wild cats, including servals, jaguars, and lynxes.

Wild Cats

From exotic wild species inhabiting unfamiliar settings to elusive forms still unknown to science or thought to be extinct, the Felidae, better known as 'cats', have been reported in sightings from around the world. According to conventional wisdom, they do not exist, but mystery cats of all sizes have attracted increasing attention from naturalists and laypersons alike, and the evidence for these animals is becoming more substantial and increasingly difficult to deny. Now, one of the world's leading cryptozoological investigators and field researchers offers a comprehensive field guide and overview of these mysterious cat-like creatures. Filled with photographs, comprehensive paintings, classifications, and hard evidence, this book offers an invaluable resource for those who wish to investigate these sightings further or simply enjoy the fascinating reports provided by others.

The Cryptozoology of Cats

Presents information about the physical features, behavior, habitats, and geographical distribution of wild and feral cats throughout the world, and the dangers they face from humans and changes to their environment.

The Wild Cat Book

The role of the mountain lion in myth and lore, and their status in today's wilderness.

Cats For Dummies

Right across Britain, people are reporting large feral cats resembling panthers, pumas and lynx. How have these cats established themselves? What are their territories, how are they breeding and are numbers viable? This book reviews the evidence and considers the implications of Britain's large cats, for people and for wildlife.

Cats

Did you know that European royalty once used cheetahs to hunt deer, or that caracals can capture birds by leaping six and a half feet straight up into the air from a standing start? Have you ever wondered whether domestic cats really do land on their feet when they fall, or how Canada lynx can stalk their prey in the winter without falling through the deep snow? *Wild Cats of the World* is a treasure trove of answers to questions like these, and many others, for anyone who's interested in learning more about the world's felids, including the ones with whom we share our homes. Mel and Fiona Sunkist have spent more than a decade gathering information about cats from every available source, many of them quite difficult to find, including scientific papers, descriptions of hunts, archeological findings, observations by naturalists and travelers, reports from government agencies, and newsletters from a wide variety of organizations. Weaving information from these sources together with their own experiences observing wild cats around the world, the Sunkists have created the most comprehensive reference on felids available. Each of their accounts of the 36 species of cat contains a description of the cat, including human interactions with it, as well as detailed data on its distribution, ecology and behavior, status in the wild, and efforts to conserve it. Numerous photographs, including more than 40 in full color, illustrate these accounts. Ranging from the two-pound black-footed cat to the five-hundred-pound tiger, and from the African serval with its satellite-dish ears to the web-footed fishing cat of Asia, *Wild Cats of the World* will fascinate and educate felid fans of any stripe (or spot).

Cougars

"Awe. It's the overwhelming emotion 20 authors express for the cougar—or mountain lion or panther or puma—in [this] beautiful literary anthology." —The Durango Herald Foreword by Jane Goodall This spellbinding tribute to Puma concolor honors the big cat's presence on the land and in our psyches. In some essays, the puma appears front and center: a lion leaps over Rick Bass's feet, hurtles off a cliff in front of J. Frank Dobie, gazes at Julia Corbett when she opens her eyes after an outdoor meditation, emerges from the fog close enough for poet Gary Gildner to touch. Marc Bekoff opens his car door for a dog that turns out to be a lion. Other works evoke lions indirectly. Biologists describe aspects of cougar ecology, such as its rugged habitat and how males struggle to claim territory. Conservationists relate the political history of America's greatest cat. Short stories and essays consider lions' significance to people, reflecting on accidental encounters, dreams, Navajo beliefs, guided hunts, and how vital mountain lions are to people as symbols of power and wildness. Contributors include: Rick Bass, Marc Bekoff, Janay Brun, Julia B. Corbett, Deanna Dawn, J. Frank Dobie, Suzanne Duarte, Steve Edwards, Joan Fox, Gary Gildner, Wendy Keefover-Ring, Ted Kerasote, Christina Kohlruss, Barry Lopez, BK Loren, Cara Blessley Lowe, Steve Pavlik, David Stoner, and Linda Sweanor. "Puma. Cougar. Mountain lion. Panther. These words and the creatures they represent inspire awe, wonder, excitement, terror, and reverence in the writers whose contributions make up this anthology." —Library Journal

Listening to Cougar

The cougar is one of the most beautiful, enigmatic, and majestic animals in the Americas. Eliciting reverence for its grace and independent nature, it also triggers fear when it comes into contact with people, pets, and livestock or competes for hunters' game. Mystery, myth, and misunderstanding surround this remarkable creature. The cougar's range once extended from northern Canada to the tip of South America, and from the Pacific to the Atlantic, making it the most widespread animal in the western hemisphere. But overhunting and loss of habitat vastly reduced cougar numbers by the early twentieth century across much of its historical range, and today the cougar faces numerous threats as burgeoning human development encroaches on its remaining habitat. When Maurice Hornocker began the first long-term study of cougars in the Idaho wilderness in 1964, little was known about this large cat. Its secretive nature and rarity in the landscape made it difficult to study. But his groundbreaking research yielded major insights and was the prelude to further research on this controversial species. The capstone to Hornocker's long career studying big cats, *Cougar* is a powerful and practical resource for scientists, conservationists, and anyone with an interest in large carnivores. He and conservationist Sharon Negri bring together the diverse perspectives of twenty-two distinguished scientists to provide the fullest account of the cougar's ecology, behavior, and genetics, its role as a top predator, and its conservation needs. This compilation of recent findings, stunning photographs, and firsthand accounts of field research unravels the mysteries of this magnificent animal and emphasizes its importance in healthy ecosystem processes and in our lives.

The Secret Life of Cats

What are cats? How do cats hunt? Do wild cats like catnip? Do cats dream? *Cats in Question*, a new book in Smithsonian's highly successful "In Question" series, offers authoritative and engaging answers to the thousands of questions about cats that Smithsonian scientists receive annually. All of the world's cats are here, from fearsome predators such as lions and tigers, to mysterious hunters such as leopards and jaguars, to cuddly pets such as domestic cats. More than 100 breathtaking photographs by acclaimed photographer Art Wolfe illustrate the questions on cat facts, cat evolution and diversity, and cats and humans.

Cougar

In *Charles, the Crowded Cougar*, an orphaned cougar living in Colorado faces danger every day from noisy bulldozers, mean male cougars, hunters, and scary road crossings. Wildlife Ambassador Bella, a Newfoundland, befriends Charles, offers sage advice about humans, and helps the cougar out of a prickly situation.

Cats in Question

Cats exceed dogs in their numbers as companion animals in the U.S. and much of Europe, despite them not filling working roles. In the past, their prowess as mousers on farms sometimes made them essential, but these days, many cats lead leisurely lives in people's homes. What accounts for them becoming such appreciated family members? What are their behaviors that are so enticing? Exactly how do they respond to us? When are they preferred companion animals, more than dogs? What do we know about cultural differences in views about cats? Their growing popularity, and the relative paucity of data about owned cats living in homes, emphasizes the importance of monitoring their welfare. The anthrozoological research literature on companion animals includes extensive studies of dogs, while contributing relatively few close looks at the special behaviors and traits of domestic cats that make them so desirable as companions. We know little about the dynamics of our interactions with cats and the attachment shared with them, which may differ in some ways for those we have with dogs. Nor have we identified the specific contexts where cats are particularly or uniquely compatible. How does the type of attachment affect and shape the bond/relationship between human and cat? How are cats as emotional support animals for people with special needs, especially autism? What new information do we have about the cognitive abilities of domestic cats, and how these abilities shape cats' behavior and relationships with humans? How do early life experiences of cats influence their behavior as adults, or their successful integration into human households? Do cats fit best in certain residential settings, or with specific types or ages of people? This Research Topic provides an opportunity to update our

understanding on the special qualities and behaviors of cats, and to scrutinize our mutual interactions with these companions.

Living in the Wild

The Veterinary Psychiatry of Cats introduces veterinary behavioral medicine and veterinary psychiatry using the domestic cat as its model. This book combines the most up-to-date understanding of biology of this beloved, revered and often maligned species with learnings from the fields of normal and abnormal psychology. Written by a leading expert in feline behavior, this book begins by assessing “normal factors of feline behavior, from neuroanatomy, neuroendocrinology, cognitive and social abilities. Delving into psychiatry, it then discusses mental health disorders, hindered development, and trauma. Psychopharmacology, including medications and supplements, are also explained. The Veterinary Psychiatry of Cats finishes with a comprehensive view of feline welfare management, how to treat cats humanely and how to house them responsibly given their behaviors. This is an ideal resource for feline behavioral specialists, veterinarians and domestic animal researchers and practitioners, including veterinary technicians, students and even feline owners. Examines and explains normal versus abnormal feline psychology and its effects on a cat’s behaviors Addresses signs of feline psychiatric disorders, diagnoses and treatments Discusses medications and supplements to prevent, cure or care for feline behavioral issues

Bella, the Wildlife Ambassador: Charles, the Crowded Cougar

Cats and Conservationists is the first multidisciplinary analysis of the heated debate about free-roaming cats. The debate pits conservationists against cat lovers, who disagree both on the ecological damage caused by the cats and the best way to manage them. An impassioned and spirited conflict, it also sheds light on larger questions about how we interpret science, incorporate diverse perspectives, and balance competing values in order to encourage constructive dialogue on contentious social and environmental issues. On one side of the cat debate stand many environmentalists, especially birders and conservation organizations, who believe that outdoor cats seriously threaten native wildlife. On the other side are many animal welfare advocates, who believe that outdoor cats generally do not pose a major ecological threat and that it is possible for cats and wildlife to coexist. They believe that it is possible, mainly through trap-neuter-return projects (TNR), to keep free-roaming cat populations in check without killing large numbers of cats. Careful analysis suggests that there remain important questions about the science on both cat predation and TNR effectiveness. Yet both sides of the conflict insist that the evidence is clear-cut. This false certainty contributes to conflict between conservationists and cat lovers, and obscures common goals that could generate constructive discussions and collaborative efforts among scientists, policymakers, conservationists, and animal welfare advocates. Cats and Conservationists aims to facilitate such collaboration in order to manage outdoor cats and minimize the damage they cause. It also offers models for constructive debates about the public role of science in other polarized public conflicts over science and environmental topics.

Here is an entertaining collection of John Muir's most exciting adventures, representing some of his finest writing. From the famous avalanche ride off the rim of Yosemite Valley to his night spent weathering a windstorm at the top of a tree to death-defying falls on Alaskan glaciers, the renowned outdoorsman's exploits are related in passages that are by turns exhilarating, unnerving, dizzying, and outrageous.

Meditations of John Muir

Editor Chris Highland pairs 60 insightful Muir quotes with selections from other celebrated thinkers and spiritual texts. Take this pocket-size guide with you on backpacks, nature hikes, and camping trips.

Our National Parks

John Muir (1838–1914) ranks among America's most important and influential environmentalists and nature writers. Devoted to the preservation of wilderness areas, Muir founded the Sierra Club and was active in the establishment of Yosemite National Park. *Our National Parks*, originally published in 1901, includes ten articles that previously appeared in *The Atlantic Monthly*. Muir wrote them in hopes of exciting interest in the parks, certain that visitors would fall in love with the scenic grandeur as he had—and that their enthusiasm would ensure the parks' preservation. Six of this volume's ten chapters are devoted to Muir's beloved Yosemite, exploring the forests, fountains, streams, and animals of the Sierra Nevada. The great naturalist also visits the meadows, geysers, waterfalls, and lakes of other parks, including Yellowstone, Sequoia, and General Grant. Muir's warmth and humor brighten every page, and vintage photographs provide atmospheric accompaniment to his words. These essays are essential reading for anyone wishing to visit (or revisit) the national parks of the Western United States as well as those who want to help protect America's wilderness areas.

Books In Print 2004-2005

"I am now writing up some notes, but when they will be ready for publication I do not know... It will be a long time before anything is arranged in book form." These words of John Muir, written in June 1912 to a friend, proved prophetic. The journals and notes to which the great naturalist and environmental figure was referring have languished, unpublished and virtually untouched, for nearly a century. Until now. Here edited and published for the first time, John Muir's travel journals from 1911-12, along with his associated correspondence, finally allow us to read in his own words the remarkable story of John Muir's last great journey. Leaving from Brooklyn, New York, in August 1911, John Muir, at the age of seventy-three and traveling alone, embarked on an eight-month, 40,000-mile voyage to South America and Africa. The 1911-12 journals and correspondence reproduced in this volume allow us to travel with him up the great Amazon, into the jungles of southern Brazil, to snowline in the Andes, through southern and central Africa to the headwaters of the Nile, and across six oceans and seas in order to reach the rare forests he had so long wished to study. Although this epic journey has received almost no attention from the many commentators on Muir's work, Muir himself considered it among the most important of his life and the fulfillment of a decades-long dream. *John Muir's Last Journey* provides a rare glimpse of a Muir whose interests as a naturalist, traveler, and conservationist extended well beyond the mountains of California. It also helps us to see John Muir as a different kind of hero, one whose endurance and intellectual curiosity carried him into far fields of adventure even as he aged, and as a private person and family man with genuine affections, ambitions, and fears, not just an iconic representative of American wilderness. With an introduction that sets Muir's trip in the context of his life and work, along with chapter introductions and a wealth of explanatory notes, the book adds important dimensions to our appreciation of one of America's greatest environmentalists. *John Muir's Last Journey* is a must reading for students and scholars of environmental history, American literature, natural history, and related fields, as well as for naturalists and armchair travelers everywhere.

John Muir's Last Journey

Here is the adventure that started John Muir on a lifetime of discovery. Taken from his earliest journals, this book records Muir's walk in 1867 from Indiana across Kentucky, Tennessee, North Carolina, Georgia, and Florida to the Gulf Coast. In his distinct and wonderful style, Muir shows us the wilderness, as well as the towns and people, of the South immediately after the Civil War

A Thousand-Mile Walk to the Gulf

John Muir is regarded as the 'father of America's national parks' and is a towering figure in the history of that country's involvement with ecology. Born into a harsh home in Dunbar, Scotland he would often escape to revel in the birds and wildlife of the area. When his father suddenly uprooted the family and moved to the United States, the oppression he associated with his childhood continued - and so did his involvement with the natural world. Despite the difficulty of his formative years Muir grew up to be a man of great joy - first an inventor and then an explorer, he found his haven in the mountains of Sierra Nevada. He was a fascinating character: on the one hand a recluse, who sought solitude, and on the other a passionate activist, determined to save the places he loved. A strong believer in both God and the essential goodness of humanity, he was the founder and first president of the Sierra Club. This wonderful memoir pays tribute to a giant of ecology and is essential reading for lovers of natural history.

John Muir

Although Sierra Club founder and important early environmentalist John Muir was born in Scotland, he spent much of his life traipsing through the wonders of the American wilderness -- and fighting to protect what he regarded as the country's greatest resource. This engaging autobiography tells the tale of how Muir made his way to the United States to find his true calling.

Outdoor Highlights

Caldecott medalist Mordicai Gerstein captures the majestic redwoods of Yosemite in this little-known but important story from our nation's history. In 1903, President Theodore Roosevelt joined naturalist John Muir on a trip to Yosemite. Camping by themselves in the uncharted woods, the two men saw sights and held discussions that would ultimately lead to the establishment of our National Parks.

John Muir Trail

The name of John Muir has come to stand for the protection of wild land and wilderness in both America and Britain. Born in Dunbar in the east of Scotland in 1838, Muir is famed as the father of American conservation, and as the first person to promote the idea of National Parks. Combining acute observation with a sense of inner discovery, Muir's writings of his travels through some of the greatest landscapes on Earth, including the Carolinas, Florida, Alaska and those lands which were to become the great National Parks of Yosemite and the Sierra Valley, raise an awareness of nature to a spiritual dimension. These journals provide a unique marriage of scientific survey of natural history with lyrical

and often amusing anecdotes, retaining a freshness, intensity and brutal honesty which will amaze the modern reader. This collection, including the never-before-published Stickeen, presents the finest of Muir's writings, and imparts a rounded portrait of a man whose generosity, passion, discipline and vision are an inspiration to this day.

Better Homes and Gardens

Considered one of the patron saints of twentieth-century environmental activity, John Muir's appeal to modern readers is that he not only explored the American West but also fought for its preservation. *Travels in Alaska* is part of a series that celebrates the tradition of literary naturalists—writers who embrace the natural world. In this collection, originally published in 1915, John Muir captures the beauty and intensity of Alaskan wilderness and its people from his travels between 1879 and 1890. John Muir's strength lies in delicately mapping the intimate connection between the person and natural world, and awakening his readers to that reality. With an increasing global focus on the environment, and humans' role in protecting it, there's never been a finer time to reacquaint oneself with John Muir's writings. John Muir was a Scottish-born American naturalist, author, early advocate of preservation of wilderness in the United States, and founder of The Sierra Club. His letters, essays, and books of his adventures in nature have been read by millions.

The Camping Trip that Changed America

My First Summer in the Sierra describes two years period of Muir's life during which he lived in a cabin in Californian mountains. When he came to California and finally settled in San Francisco, John Muir immediately left for a visit to Yosemite, a place he had only read about. Seeing it for the first time, Muir noted that "He was overwhelmed by the landscape, scrambling down steep cliff faces to get a closer look at the waterfalls, whooping and howling at the vistas, jumping tirelessly from flower to flower." He climbed a number of mountains, including Cathedral Peak and Mount Dana, and hiked the old Indian trail down Bloody Canyon to Mono Lake.

THE OFFICIAL NORTH AMERICAN EDITION "Beguiling, audacious... rises to its own challenges in engaging intellectually as well as wholeheartedly with its questions about gender, genre and the concept of wilderness. The novel displays wide reading, clever writing and amusing dialogue." —The Guardian This is a new kind of nature writing — one that crosses fiction with science writing and puts gender politics at the center of the landscape. Erin, a 19-year-old girl from middle England, is travelling to Alaska on a journey that takes her through Iceland, Greenland, and across Canada. She is making a documentary about how men are allowed to express this kind of individualism and personal freedom more than women are, based on masculinist ideas of survivalism and the shunning of society: the "Mountain Man." She plans to culminate her journey with an experiment: living in a cabin in the Alaskan wilderness, à la Thoreau, to explore it from a feminist perspective. The book is a fictional time capsule curated by Erin, comprising of personal narrative, fact, anecdote, images and maps, on subjects as diverse as The Golden Records, Voyager 1, the moon landings, the appropriation of Native land and culture, Rachel Carson, The Order of The Dolphin, The Doomsday Clock, Ted Kaczynski, Valentina Tereshkova, Jack London, Thoreau, Darwin, Nuclear war, The Letters of Last Resort and the pill, amongst many other topics. "Refreshingly outward-looking in a literary culture that turns ever inward to the self, although it still has profound moments of introspection. Uplifting, with a thirsty curiosity, the writing is playful and exuberant. Riffing on feminist ideas but unlimited in scope, Andrews focuses our attention on our beautiful, doomed planet, and the astonishing things we have yet to discover." —Ruth McKee, The Irish Times

The Academy and Literature

The papers brought together in this volume have, in a general way, been arranged in chronological sequence. They span a period of twenty-nine years of Muir's life, during which they appeared as letters and articles, for the most part in publications of limited and local circulation. The Utah and Nevada sketches, and the two San Gabriel papers, were contributed, in the form of letters, to the San Francisco Evening Bulletin toward the end of the seventies. Written in the field, they preserve the freshness of the author's first impressions of those regions.

The academy

Renowned naturalist John Muir is widely credited as being one of the important early figures in the conservation movement. In this series of essays, Muir introduces readers to the wonders of the majestic Yosemite region, a place he visited as soon as he arrived in America in 1868. The beauty of the area's mountains, lakes, and vistas inspired Muir to devote himself to nature and its preservation.

Travels in Alaska

"In this remarkable journey, Mark Woods captures the essence of our National Parks: their serenity and majesty, complexity and vitality--and their power to heal." --Ken Burns Many childhood summers, Mark Woods piled into a station wagon with his parents and two sisters and headed to America's national parks. Mark's most vivid childhood memories are set against a backdrop of mountains, woods, and fireflies in places like Redwood, Yosemite, and Grand Canyon national parks. On the eve of turning fifty and a little burned-out, Mark decided to reconnect with the great outdoors. He'd spend a year visiting the national parks. He planned to take his mother to a park she'd not yet visited and to re-create his childhood trips with his wife and their iPad-generation daughter. But then the unthinkable happened: his mother was diagnosed with cancer, given just months to live. Mark had initially intended to write a book about the future of the national parks, but *Lassoing the Sun* grew into something more: a book about family, the parks, the legacies we inherit and the ones we leave behind.

The Saturday Review of Politics, Literature, Science and Art

Imagine a U.S. president on a camping trip! It seems unlikely today, but in May 1903, President Theodore Roosevelt dismissed his Secret Service men to go camping with John Muir, the world-famous naturalist. For three glorious nights and four days in California's Yosemite National Park, the two men talked about birds, giant sequoia trees, glaciers, as well as the importance of preserving wilderness for future generations. They slept under the stars, built blazing campfires, and enjoyed the beauty and the uniqueness of the area. Setting aside new national parks and monuments became one of the cornerstones of Roosevelt's presidency and was a direct result of this camping trip. Author Ginger Wadsworth and illustrator Karen Dugan carefully researched this true story, relying on primary documents and working closely with experts in the field.

My First Summer in the Sierra (Illustrated Edition)

In 1995 the National Trust for Scotland acquired Mar Lodge Estate in the heart of the Cairngorms. Home to over 5,000 species, this vast expanse of Caledonian woodlands, subarctic mountains, bogs, moors, roaring burns and frozen lochs could be a place where environmental conservation and Highland field sports would exist in harmony. The only problem was that due to centuries of abuse by human hands, the ancient Caledonian pinewoods were dying, and it would take radical measures to save them. After 25 years of extremely hard work, the pinewoods, bogs, moors and mountains are returning to their former glory. Regeneration is the story of this success, featuring not only the people who are protecting the land and quietly working to undo the wrongs of the past, but also the myriad creatures which inspire them to do so. In addition, it also tackles current controversies such as raptor persecution, deer management and rewilding and asks bigger questions about the nature of conservation itself: what do we see when we look at our wild places? What should we see?
