Motivate your BPD clients with values-based treatment! This 16-week ACT protocol will help you get started today. As you know, clients with borderline personality disorder (BPD) and emotion dysregulation often struggle with negative beliefs about themselves—beliefs that can lead to feelings of shame, problems with personal relationships, and dangerous behaviors. And while dialectical behavior therapy (DBT) is the standard treatment for BPD, more and more, acceptance and commitment therapy (ACT) has shown promising results when treating BPD clients by helping them focus on their core values and forgiveness. Acceptance and Commitment Therapy for Borderline Personality Disorder provides a comprehensive program for delivering ACT to clients with BPD. Using the session-by-session,

16-week protocol in this professional guide, you can help clients work through the main driver behind BPD—experiential avoidance—and gain the psychological flexibility needed to balance their emotions and begin healing. You can use this protocol on its own, or in conjunction with treatment. With this guide, you'll learn to target the fundamental causes of BPD for better treatment outcomes and happier, healthier clients.

The most common personality disorder here and abroad, borderline personality disorder is often misdiagnosed or underdiagnosed. Left untreated, it causes marked distress and impairment in social, occupational, and role functioning, with high rates of self-destructive behavior (attempted and completed suicide). Its pervasive pattern of impulsivity and instability of interpersonal relationships, affects, and self-image begins in early adulthood and presents in a variety of contexts. Developed primarily by psychiatrists in active clinical practice, the revised edition of this popular work offers an updated synthesis of current scientific knowledge and rational clinical practice for patients with borderline personality disorder -- with the important caveat that clinicians should consider, but not limit themselves to, the treatments recommended here. The summary of treatment recommendations is keyed according to the level of confidence with which each recommendation is made and coded to show the nature of its supporting evidence. Highly informative and easy to use, this eminently practical volume is organized

into three major parts: Part A contains treatment recommendations (Section I, treatment summaries; Section II, treatment plans; Section III, special clinical considerations; and Section IV, risk management issues during treatment), Part B presents the evidence underlying these treatment recommendations (Section V, an overview of DSM-IV-TR criteria, prevalence rates, and natural history and course; and Section VI, a review of existing treatment literature), and Part C summarizes those areas in which better research data are needed. Remarkably concise and comprehensive, this practice guideline continues to be an indispensable reference for every clinician who treats patients with this heterogeneous and complex disorder.

Personality Disorder and Serious Offending

People with personality disorder who offend tend to be neglected by health services in most countries. In the UK, there has been renewed interest in the field since government initiatives in the end of the 1990s. Government proposals themselves are controversial, but there is growing recognition that it is unsafe, both for the general public and fo

A Primer of Transference-Focused Psychotherapy for the Borderline Patient

Treating borderline patients is one of the most challenging areas in psychotherapy because of the patient's extreme emotional expressions, the strain it places on the therapist, and the danger of the patient acting out and harming himself or the therapeutic relationship. Many clinicians consider this patient population difficult, if not impossible, to treat. However, in recent years dedicated experts have focused their clinical and research efforts on the borderline patient and have produced treatments that increase our success in working with borderline patients. Transference-Focused Therapy (TFP) is psychodynamic treatment designed especially for borderline patients. This book provides a concise and comprehensive introduction to TFP that will be useful both to experienced clinicians and also to students of psychotherapy.

Integrated Treatment for Co-Occurring Disorders

Integrated Treatment for Co-Occurring Disorders addresses a complex client population, which presents service providers with significant professional challenges. Underlying personality disorders compromise treatment effectiveness for medical, other psychiatric, or trauma services, as well as the ability these individuals have in adhering to probation, parole, or court-ordered treatment requirements. A co-occurring substance use disorder amplifies the difficulties experienced by personality-disordered individuals, exacerbates the precarious nature of their relationships, and raises the skill level needed by service providers attempting to help them. There can be significant professional satisfaction in working effectively with the interplay of addiction and disorders of personality. The book brings focus to the specifics of assessment and treatment for this type of co-occurring disorder and suggests that greater adaptability, fewer self-sabotaging behaviors, and an abstinent lifestyle are all possible. Recovery from both disorders is the journey these individuals take toward greater maturation, reliable impulse control,

and coping skills that are not dependent upon the evasion of the demands of living or use of substances to manage stress or uncomfortable affect. Recovery is possible, and service providers can assist these clients on their path to wellness.

Inner Torment

Integrating diverse psychoanalytic traditions with his own theoretical and clinical insights, Salman Akhtar provides answers to these and other important questions in this realm. He weaves the existing conceptual schisms and technical diversity into an integrated theory and technique. In a truly original contribution, he delineates certain ubiquitous human fantasies (e.g., "someday" and "if only" fantasies of optimism and nostalgia, and fantasies of powerful psychic tethers that bind us to others) and shows how their pathological variants underlie the suffering of these patients.

Lying, Cheating, and Carrying On

What constitutes a lie? What are the different types of lies? Why do people lie? Is dishonesty ubiquitous in human experience? And what should be done with individuals who seek psychotherapeutic help and yet can not reveal important aspects of their lives and even fabricate histories, associations, and dreams? Such questions form the backbone of this exceptional book. Starting with the emergence of the capacity to lie in childhood and the formative influence of the family in children's moral development, the discourse goes on to include the variety of adulthood lies, including social lies, existential lies, pathological lies, narcissistic lies, and sociopathic lies. Contributions from distinguished psychoanalysts like Salman Akhtar, Harold Blum, Ruth Fischer, Lucy LaFarge, Henri Parens, and Michael Stone, along with others, explore the impact of dishonesty on the internal and external realities of an individual. Malignant forms of lies involving serious character pathology and criminality, as well as their detection, are also discussed. The book's aim is to help therapists enhance their empathy with patients who are compelled to lie and to provide them with better therapeutic strategies to deal with the clinical dilemmas that arise in working with such children and adults.

Borderline Personality Disorder

Covering the range of clinical presentations, treatments, and levels of care, *Borderline Personality Disorder: A Clinical Guide, Second Edition*, provides a comprehensive guide to the diagnosis and treatment of borderline personality disorder (BPD). The second edition includes new research about BPD's relationship to other disorders and up-to-date descriptions of empirically validated treatments, including cognitive-behavioral and psychodynamic approaches. Compelling new research also indicates a much better prognosis for BPD than previously known. A pioneer in the field, author John Gunderson, M.D., director of the Borderline Personality Disorder Center at McLean Hospital, draws from nearly 40 years of research and clinical experience. The guide begins with a clear and specific definition of BPD, informed by a nuanced overview of the historical evolution of the diagnosis and a thoughtful discussion of misdiagnosis. Offering a complete evaluation of treatment approaches, Dr. Gunderson provides an authoritative overview of the treatment options and describes in-depth each modality of treatment, including pharmacotherapy, family therapy, individual and group therapy, and cognitive-behavioral therapies. Unlike other works, this book guides clinicians in using multiple modalities, including the sequence of treatments and the types of changes that can be expected from each mode. The discussion of each treatment emphasizes empirically validated therapies, helping clinicians choose modalities that work best for specific patients. In addition, *Borderline Personality Disorder: A Clinical Guide, Second Edition*, also outlines therapeutic approaches for multiple settings, such as hospitalization, partial hospitalization or day hospital programs, and levels of outpatient care. Complementing the well-organized treatment guide are a series of informative and intriguing sidebars, providing insight into the subjective experience of BPD, addressing myths about therapeutic alliances in BPD, and questioning the efficacy of contracting for safety. Throughout the book, Dr. Gunderson recommends specific do's and don'ts for disclosing the diagnosis, discussing medications, meeting with families, starting psychotherapy, and managing suicidality. A synthesis of theory and practical examples, *Borderline Personality Disorder: A Clinical Guide, Second Edition*, provides a thorough and practical manual for any clinician working with BPD patients.

The Birth of Hatred

What is hatred? How does it differ from rage? What are its origins? Is hatred ever rational? Why are some people unable to let go of it while others are completely incapable of feeling it? Eight distinguished psychoanalysts provide the answers to these and other related questions in this tightly organized volume. With the help of clinical vignettes and literary portrayals, these experienced therapists address the emergence of hatred in the clinical situation. They highlight the various purposes served by the patient's hatred including drive discharge, projective identification, defense against dependence, anchoring of identity, and self holding. They also present a rich understanding of the hatred felt by the therapist vis-à-vis hateful and chronically self-destructive individuals. Finally, they discuss the technical implications of these concepts and delineate useful interventions to contain, manage, and interpret the patient's intense hatred. The matters discussed in this book are diverse and include infant observation, gender differences, child abuse, severe character pathology, multiple personality, countertransference difficulties, literary characters, racial prejudice, ethnic hatred, and war. The focus of the book, however, remains clinical. Its ultimate aim is to enhance the clinician's ability to deal with the hatred felt by the patient, and, at times, by the therapist.

Immigration and Identity

Immigration from one country to another is a complex psychological process with significant and lasting effects on an individual's identity. Even under the best circumstances, immigration is a traumatic occurrence; like other traumas, it mobilizes a mourning process. It also offers renewed opportunity for psychic growth and alteration, and the mourning-liberation process transforms the immigrant's identity. In this book, this progression is highlighted along the dimensions of drives and affects, interpersonal and psychic space, temporality, and social affiliation. As the topics of identity and immigration are brought together in a deep and meaningful way, their clinical assessment and relevance are presented. Detailed guidelines are offered for conducting psychotherapy with immigrant patients, including child and family interventions. The specific dilemmas of the immigrant therapist are also explored, including linguistic differences, maintaining cultural neutrality and transference-countertransference issues.

Interpersonal Boundaries

Across the lifespan we may experience moments of sublime intimacy, suffocating closeness, comfortable solitude, and intolerable distance or closeness. In *Interpersonal Boundaries: Variations and Violations* Salman Akhtar and the other contributors demonstrate how boundaries, by delineating and containing the self, secure one's conscious and unconscious experience of entity and of self-governance. *Interpersonal Boundaries* reveals the complexities of the self and its boundaries, while identifying some of the enigmatic questions about how the biological, psychological, and cultural aspects of the self interrelate. The contributors skillfully integrate a wide range of theory with a wealth of clinical material. Examples range from the dark side of boundary-violating therapists to an extraordinary presentation of harrowing analytic work with a severely traumatized man. Readers will find that this volume makes a significant contribution to the knowledge of boundaries of the self in psychotherapeutic theory and practice.

Severe Personality Disorders

This book is about understanding and managing patients with severe personality disorders. It covers biological, psychoanalytic and cognitive behavioral approaches and provides a pragmatic guide to best practice. As well as discussing issues of severity, treatability and the range of appropriate

management options, the content explores the common elements of effective interventions and covers early prediction, countertransference, disruptions of the therapeutic alliance, suicidal crises and what to do when dealing with dangerous, refractory and stalking patients. The chapters are authored by an international cast of distinguished investigators and innovators from the field. This is a holistic, practical guide to the treatment of patients with a range of these disorders and it should be read by members of the mental health team dealing with this challenging clinical group.

Mental Health Nursing

In addition to comprehensive coverage of all standard topics in psychiatric nursing, the New Edition of this groundbreaking text offers unparalleled insights into the human side of mental illness. It enables readers to empathize with psychiatric patients and treat them with dignity and understanding. A unique, holistic approach prepares readers to care for all of their patients' needs physical, psychological, social, and spiritual. This second edition contains new, one-of-a-kind appendices on patient/family teaching and spiritual interventions, clinical practice guidelines for home care, testimonials from mental health nurses in a full range of settings, new, full-color brain scan images that depict visible differences in the brains of patients with certain mental illnesses, and much more.

The Colors of Childhood

How does culture affect child-rearing practices? How do factors such as poverty, ethnic difference, racial minority status, and having immigrant parents alter the experience of a growing child? Are there culturally distinct sub-groups within the African-American population? How ubiquitous are psychoanalytically derived schedules of personality development? In what form and to what extent are transference and countertransference affected by such racial, ethnic, and economic issues? In this volume, eight distinguished psychoanalysts (including some belonging to ethnic and racial minorities) attempt to answer these questions. They provide illuminating details of child-rearing practices in African-American, Indian, and Japanese families. They interweave mythological legacies, historical background, ethnographic data, and clinical observations into a rich tapestry of knowledge, empathy, and understanding. They try to tease out the variables of socioeconomic class from the issue of race and the ambiguities consequent upon raising children in a new and unfamiliar land from the ordinary and inevitable conflicts between generations.

New Clinical Realms

New Clinical Realms, Dr. Akhtar's latest book, raises intriguing questions about man's subjective experience and his relationship with the world around him. What exactly is mental pain? How does forgiveness occur? What is the proper psychosocial role of a mentor? And, even more provocatively, what is man's inner relationship with animals? How do inanimate objects sustain and facilitate psychic development throughout the life span? Do the physical objects in the clinical setting actually affect the patient's mind? How does simplicity lead to contradiction and at what stage does contradiction yield to paradox? With the help of illuminating clinical vignettes and a solid anchor in the contemporary diversity of psychoanalytic theorizing, Akhtar's book offers clinicians a rare glimpse into both the dark corners of psychopathology and the fresh arenas of healthy mental functioning. As a result, the readers find their capacity for empathy deepened and their therapeutic skills sharpened. A Jason Aronson Book

International Bibliography of Book Reviews of Scholarly Literature Chiefly in the Fields of Arts and Humanities and the Social Sciences

Winner of the 2006 Gradiva Award A collection of new and previously-published essays that sheds light on the intersections between psychoanalysis and Indic Studies. While Indian academics and clinicians have been familiar with psychoanalysis for many decades, they have kept this Western model of the mind separate from the spiritual and philosophical traditions of their own country. Freud Along the Ganges bridges this important lacuna in psychoanalytic and Indic studies by creating a new theoretical field where human motives are approached not only psychoanalytically but also from the perspective of the teachings of Buddha, Tagore, Ghandi, and Salman Rushdie. The authors of this collection show how the insights of these Indian masters give a new force to the Freudian discovery by providing a basis to better understand the social and psychological Indian makeup. The book begins by questioning the applicability of the psychoanalytic method to non-Western cultures. It then traces the history of the psychoanalytic movement in India from its onset while it emphasizes the intricate overlap between

Indian existential and mystical traditions and psychoanalysis. Freud Along the Ganges offers a unique study of the ways that Indian thought and psychoanalysis illuminate and enrich each other.

Freud Along the Ganges

This small volume comprises primarily papers presented in 2001 at the 32nd Annual Margaret S. Mahler Symposium on Child Development in Philadelphia, Pennsylvania. Mourning and the importance of the capacity to bear some helplessness, while still finding pleasure in life, are central to this tightly organized volume. The multi-faceted processes involved in mourning and adaptation are addressed. Expectably, Mahler's conceptual contributions are liberally referenced throughout the volume - separation individuation, libidinal object constancy, the unavoidable losses of developmental changes, and mourning of the loss of one-ness. In keeping with the design of the symposium, the book is organized around four primary chapters (presentations), each followed by a discussion chapter. The unifying theme is mourning of the loss of a primary object, either early in life or in adulthood.

"Teaches us how the therapists can combine his theoretical knowledge, interpersonal skills, and creative inspiration to engage the patient and eventually help him emerge into a psychic world more like our own. This book is a compelling challenge to the conventional wisdom that schizophrenia is nothing more than an organically determined, incomprehensible madness."--Back cover.

Schizophrenia and Primitive Mental States

This book deals with the identification and control of camouflaged aggression in all organizations, from small businesses to multinational corporations and governments. Here there are descriptions of patterns of camouflaged aggression within the workplace, such as time and information manipulation, withdrawal, inaccessibility, entrapment and undermining the sense of security. The author analyzes the impact of this non-violent aggression on mental health and on productivity, and its possible function in explosive violence and random mass murder. The final chapter suggests strategies for the identification, prevention and management of camouflaged aggression in the workplace.

R.D. Laing, from a contemporary perspective, is admired as a pioneer of ideas and a charismatic and prominent anti-psychiatrist. This book reveals, however, that Laing's view of sanity and insanity as a continuum and his opposition to high-dosage anti-psychotic medication already formed part of the Scottish psychiatric tradition.

In this important book, one of the world's foremost psychoanalysts provides the clinician with tools to diagnose and treat severe cases of personality disorder, including borderline and narcissistic structures. Dr. Kernberg not only describes techniques he has found useful in clinical practice but also further develops theories formulated in his previous work and critically reviews other recent contributions. "A splendid book . . . of great value for anyone involved in psychotherapy with patients suffering from one or another variety of personality disorder, as well as for anyone who is teaching or doing research in this field. . . . An outstandingly fine and valuable book.--Harold F. Searles, M.D., Journal of Nervous and Mental Disease "Kernberg is a synthesizing, creative eclectic on the contemporary psychoanalytic and psychodynamic scene, broadly based in theory and in practice, a powerful intelligence, a prolific writer, and a man of ideas....This is a challenging and provocative book."--Alan A. Stone, M.D., American Journal of Psychiatry "A major work that brings together in one volume a host of clinical insights into people with a variety of severe personality disorders.... Anyone who has attempted to work with patients with severe personality disorders will be rewarded by studying this book." --Robert D. Gillman, Psychoanalytic Quarterly

Kisses Aren't Contracts

There are many approaches to the treatment of patients with borderline personality disorder. In this fascinating volume, the editors interview the major proponents of these approaches. The book contains fourteen interviews with a diverse range of therapists. The questions are the same, but the answers are as different as the personalities of the respondents. They discuss the major principles of their treatment, their professional development, and their differences. The interviews also reveal the people behind the theories. What personal motives made them want to work with patients so often considered "difficult"? Why did they choose or develop the specific methods that they use? The therapists represented in this comprehensive volume are Gerald Adler, Salman Akhtar, Lorna Smith Benjamin, John Clarkin, Robert Cloninger, Arthur Freeman, Glenn Gabbard, Otto Kernberg, Marsha Linehan, John Livesley, James Masterson, Lawrence Rockland, Michael Stone, and Jeffrey Young. These master clinicians explain what they would do in very specific situations, such as the middle-of-the-night suicidal phone call or the chance encounter with a patient at a social gathering. The answers are instructive, sometimes surprising, and always reflective of the differences and similarities of these great therapists. The editors have provided a contemporary picture of the many ways one can go about treating people with severe personality problems.
