Color Atlas and Text of Histology

This best-selling atlas provides medical, dental, allied health, and biology students with an outstanding collection of histology images for all of the major tissue classes and body systems. This is a concise lab atlas with relevant text and consistent format presentation of photomicrograph plates. With a handy spiral binding that allows ease of use, it features a full-color art program comprising over 500 high-quality photomicrographs, scanning electron micrographs, and drawings. Didactic text in each chapter includes an Introduction, Clinical Correlations, Overview, and Chapter Summary.

Color Atlas of Histology

With hundreds of color photomicrographs and illustrations, this atlas covers the cell, epithelium and glands, connective tissues, cartilage and bone, blood and hemopoiesis, muscle, nervous tissue, the circulatory system, lymphoid tissue, the endocrine system, integument, respiratory system, digestive and urinary systems, male and female reproductive systems and the eye and ear. Each chapter includes a short introduction and essential concepts, histopathology, and clinical considerations. All the illustrations have been reshot in digital format for this edition, and the CD-ROM included is interactive and contains all the photomicrographs in the text. Annotation : 2005 Book News, Inc., Portland, OR (booknews.com).

Color Atlas of Histology

This atlas provides undergraduate medical students with an understanding of the histological structures of various tissues and functional correlation. Beginning with an introduction to histology, microscopy and tissue preparation for microscopy, the following chapters illustrate histological aspects of different tissues (epithelial, connective, muscular and nervous), in different systems of the body. Each chapter concludes with a table summarising the microscopic structure of organs in the relevant system, and their function. The final chapter presents sample histology slides to enhance learning. Highly illustrated with nearly 340 clinical images and tables, the book also includes multiple choice and descriptive questions to assist revision. Key points Provides undergraduate medical students with an understanding of histological structures and functions of tissues Covers all different tissue types in various systems of the body Includes sample histology slides to enhance learning Multiple choice and descriptive questions assist revision

Atlas of Histology

Never HIGHLIGHT a Book Again! Virtually all of the testable terms, concepts, persons, places, and events from the textbook are included. Cram101 Just the FACTS101 studyguides give all of the outlines, highlights, notes, and quizzes for your textbook with optional online comprehensive practice tests. Only Cram101 is Textbook Specific. Accompanys: 9780781798280 9780781752169 .

Color Atlas and Text of Histology

The go-to tool for mastering histology, Gartner & Hiatt's Atlas and Text of Histology, 8th Edition, equips medical, dental, allied health, and biology students with a concise review of all of the major tissue classes and body systems in an engaging approach optimized for superior classroom and clinical success. A consistent presentation combines relevant text and detailed photomicrographs to facilitate understanding and provide valuable review for in-class and licensing examinations. Helpful explanatory text in each chapter details Histophysiology, Clinical Considerations, Summaries of Histologic Organization, and more, accompanied by more than 700 vivid, full-color, high-quality images.

Basic Histology: A Color Atlas & Text

Thoroughly updated to reflect all of the latest concepts and advances in the field, this concise, extensively illustrated text presents the basic science and clinical application of cellular and molecular biology. Functioning as a combined text and atlas, it is essentially two books for the price of one providing a comprehensive, visually engaging histology education from the ground up. Illustrations, tables, chapter summaries and multiple choice questions facilitate comprehension of concepts, and clinical correlations underscore the practical relevance of the material. Superb illustrations—including photomicrographs, electron micrographs, schematic diagrams and drawings—provide a visual grasp and easier retention of difficult concepts. Clinical correlations throughout the text demonstrate clinical applications and reinforce the idea that histology is pertinent not only to pathology and physiology, but in fact comprises one of the essential bases of clinical practice. New! "Pathological Considerations" section at the end of each chapter. Helpful tables provide an at-a-glance summary statement of key points. Bolded key terms, bulleted lists and chapter summaries emphasize the "need to know" information in every chapter. A combination of USMLE-style questions and image based questions in each chapter.

Studyguide for Color Atlas of Histology by Gartner, Leslie P, ISBN 9780781798280

This timeless pocket atlas is the ideal visual companion to histology and cytology textbooks. First published in 1950 and translated into eight languages, Kuehnle's Pocket Atlas of Cytology, Histology and Microscopic Anatomy is a proven classic. The fully revised and updated fourth edition contains 745 full-color illustrations - almost 200 more than were included in the third edition. Superb, high-quality microphotographs and pathologic stains are accompanied by legends, informative texts, and numerous cross-references. Key features of the updated fourth edition: More than 700 high-quality illustrations using advanced techniques in histology and electron microscopy Practical, information Concise and focused text Key concepts and ideas illustrated in less than 550 pages Ideal for exam preparation, this world-class book is an indispensable visual study tool for medical, dental and biology students. It can also serve as an outstanding review and refresher text.

Color Atlas of Histology

Color Atlas of Fetal and Neonatal Histology serves as a comprehensive atlas of the developmental histology of the major organs from 15 weeks gestation to the neonatal period. Each section includes text on basic embryologic processes that influence the development of each organ and highlight major histologic features that correspond with certain developmental periods. In addition, there are many color photomicrographs at key developmental stages to assist the reader in identifying appropriate histologic changes at each developmental stage. This book will be of great value to students of embryology, pathology residents and fellows, and attending pathologists who perform fetal autopsies.

Gartner & Hiatt's Atlas and Text of Histology

The best selling histopathology atlas in the U.S. has been thoroughly updated and expanded with new text material and 39 new illustrations. Most of the plates have been newly photographed, and all are twice as large as before, permitting finer resolution of detail.

Textbook of Histology E-Book

Organized with a systems approach to major disease, this atlas features four chapters of general pathology and 15 systems chapters. In each, you'll find these features: a brief overview of normal histologic findings; color micrographs of typical pathologic changes; corresponding text which highlights details in the illustrations; line drawings correlated to histologic findings, gross pathology or pathologic processes; and a focus on the most common diseases and their pathophysiologic details. Students will appreciate the format of this resource, which corresponds to the sequence in which they learn and study. An ideal review source for examinations and national boards, *Histopathology: A Color Atlas and Textbook* also supplements more comprehensive, less illustrated texts in the field.

Color Atlas of Cytology, Histology, and Microscopic Anatomy

This unique atlas includes over 475 full color photomicrographs while providing students with a readily accessible source of morphologic information for use in the identification of tissues and organs. Each photomicrograph is accompanied by explanatory captions that guide students to the key morphologic features that identify the function of the structures. The self-assessment section at the end of the book serves as a review tool for those structures that students traditionally have difficulty in identifying.

Color Atlas of Fetal and Neonatal Histology

Designed to provide students with a foundation in understanding and interpreting histologic and cytologic preparations, *Color Atlas of Veterinary Histology* is a practical benchside reference focusing on the normal histology of eight common domestic species. This Third Edition has been revised with new images, information, and updated terminology throughout. Introductory chapters have also been expanded to offer more complete coverage of the basic types of tissues, providing an even more thorough grounding in the principles of histology. For the first time, the more than 900 photomicrographs are available digitally in an interactive atlas on CD, offering images available for download with zoom capability. The new edition of this veterinary-specific histology atlas provides veterinary and veterinary technician students with an essential pictorial resource for interpreting histologic preparations.

Wheater's Functional Histology

The first edition of *Color Atlas of Fetal and Neonatal Histology* was an important step in updating the histology texts available to practicing pathologists and pathology trainees who perform fetal autopsy and/or participate in research involving fetal tissues. It was a well-received volume that filled a major gap in pathology references related to normal histology and provided a comprehensive, state-of-the-art review of fetal and neonatal histology. While the basics of fetal histology have changed little in the intervening years since publication of the first edition, this successor edition provides new insights and a fresh perspective. This book contains six new chapters including: blood vessels and lymphatics, external genitalia, eye, ear, skin, and maceration changes. Many existing chapters have also been expanded to address a greater breadth of fetal and neonatal histology such as postnatal testis development and the cardiac conduction system. The "Special Considerations" sections were also expanded in many chapters to address particularly problematic issues within individual organ systems. The book reviews the histology of the major organ systems in the fetus and neonate and provides detailed images, up-to-date references, and practical guidelines for identifying tissues across all gestational ages of development. The second edition of *Color Atlas of Fetal and Neonatal Histology* serves as the ultimate go-to resource for pathologists and researchers dealing with, and interested in, fetal and neonatal histology. It provides a comprehensive summary of the current status of the field with excellent and extensive illustrative examples that help guide the clinical study of fetal and neonatal histology and stimulate investigative efforts with fetal tissue.

Color Atlas of Histology

The Color Atlas of "Xenopus laevis" Histology provides the first central source on the microscopic anatomy of cells, tissues, and major organs of the adult South African clawed frog, *Xenopus laevis*. For many years, *X. laevis* has been a highly popular experimental animal model in many areas of research. The recent development of transgenic *Xenopus* technology offers the promise that this animal model will be utilized more than ever before. The purpose of this book is to provide the active researcher with a central source of high quality light microscopic color images of the tissues of *X. laevis*, to aid in the identification of the cells and tissues of interest.

Color Atlas of Histological Staining Techniques

This full colour atlas of histology offers a large collection of original photomicrographs of all tissue types. Beginning with the cell (the basic structural and functional unit of a tissue), the text follows with chapters that introduce the different types of tissues: epithelium, connective, nervous and muscular. The remaining chapters take students through each of the major organ systems and explore the tissues found within them.

Color Atlas of Histopathology

diFiore's Atlas of Histology with Functional Correlations explains basic histology concepts through realistic, full-color composite and idealized illustrations of histologic structures. Added to the illustrations are actual photomicrographs of similar structures, a popular trademark of the atlas. All structures are directly correlated with the most important and essential functional correlations, allowing students to efficiently learn histologic structures and their major functions at the same time. This new edition features:

- New chapter on cell biology accompanied by both drawings and representative photomicrographs of the main stages in the cell cycle during mitosis
- Contents reorganized into four parts, progressing logically from Methods and Microscopy through Tissues and Systems

diFiore's Atlas of Histology is the perfect resource for medical and graduate histology students.

Histopathology

This is a complete textbook on human histology for undergraduate medical students. It includes:

- Concise text with functional correlation for quick recapitulation during examinations.
- 117 photomicrographs to help identify the microscopic structures.
- 122 flowcharts that help students to revise and memorize the microanatomy.
- 106 practice figures (HE pencil drawings) which are easily reproducible in theory examinations.
- 175 3D illustrations that provide a visual grasp of difficult concepts.
- A summary (examination guide) to overcome the difficulty of summarizing the facts in written assessments.
- Interesting facts to isolate them from main text, so that these facts should not be missed by the reader.
- Clinical correlation for orientation towards pathogenesis of diseases (vertical integration).

Color Atlas of Basic Histology

Concise, current, and richly illustrated, this one-of-a-kind text encompasses cellular and molecular biological concepts as well as classical morphology to present histology from a functional perspective. A wealth of superb illustrations - including light and electron micrographs as well as schematic diagrams and three-dimensional drawings - make all concepts easy to understand, and clinical correlations underscore the practical relevance of the material. Helpful tables and summary statements summarize vital information at a glance. This title includes additional digital media when purchased in print format. For this digital book edition, media content is not included. Features an abundance of illustrations, including micrographs, diagrams, drawings, and tables that clarify essential information. Provides clinical considerations in each chapter when appropriate. Key terms are bold face and chapter summaries alert students to important content. Provides a comprehensive cross-referenced index for easy location of needed information. Contains a set of PowerPoint™ slides on CD-ROM, prepared by the authors, that offers you a convenient way to review the most essential information from the text. Offers more light micrographs and electron micrographs than ever before - with an increased number of labels in each micrograph to completely identify all of the features represented. Provides an increased focus on molecular biology. Delivers more clinical correlations throughout to more thoroughly demonstrate clinical implications. This title includes additional digital media when purchased in print format. For this digital book edition, media content is not included.

Sandritter's Color Atlas and Textbook of Histopathology

The new edition of this well-received text provides students with concise, current coverage of cell and molecular biology and classic morphology. It features a wealth of superb illustrations, including full-color light photomicrographs, electron micrographs, schematic diagrams, and drawings. Helpful tables summarize vital information for at-a-glance understanding, and summary statements highlight key material in each chapter.

Coloratlas histología

Publisher's Note: Products purchased from 3rd Party sellers are not guaranteed by the Publisher for quality, authenticity, or access to any online entitlements included with the product. Moore's Essential Clinical Anatomy, Sixth Edition, presents core anatomical concepts in a concise, student-friendly format. As with the leading, comprehensive Clinically Oriented Anatomy text, this succinct resource is widely acclaimed for the relevance of its clinical correlations, emphasizing anatomy essential to physical diagnosis for primary care, interpretation of diagnostic imaging, and understanding the anatomical basis of emergency medicine and general surgery. The text's hallmark blue Clinical Boxes highlight the practical value of anatomy, accompanied by extensive surface anatomy and medical imaging features that clarify key concepts and structures to help build clinical confidence and equip students for success in practice.

Color Atlas of Veterinary Histology

This best-selling atlas contains over 900 images and illustrations to help you learn and review the microstructure of human tissues. The book starts with a section on general cell structure and replication. Basic tissue types are covered in the following section, and the third section presents the microstructures of each of the major body systems. The highest -quality color light micrographs and electron micrograph images are accompanied by concise text and captions which explain the appearance, function, and clinical significance of each image. The accompanying website lets you view all the images from the atlas with a "virtual microscope"

Color Atlas of Basic Histopathology

Pediatric pathology has been a recognized sup-specialty of pathology for almost two decades. Today pathology training programs are required to provide education in pediatric pathology. In addition to pediatric pathology specialists, many general and community-based pathologists regularly handle pediatric specimens. A working knowledge of current pediatric pathology is essential for appropriate handling of these cases. The Color Atlas of Pediatric Pathology covers the broad range of pediatric diseases that a pathologist will likely encounter and is written by well-known leaders in this field. Coverage includes both frequent and less commonly seen cases, and each discussion presents a concise summary of the salient features of the disease along with expertly selected, high-quality color images. The Color Atlas of Pediatric Pathology is a practical working resource for every pathologist who sees pediatric cases as well as the pathology trainee. The atlas features approximately 1,100 high-quality images as well as important staging and prognostic (including molecular) parameters. Features of the Color Atlas of Pediatric Pathology include: Comprehensive coverage of pediatric surgical and autopsy pathology Each chapter is presented by a recognized expert Practical presentation: concise text highlights diagnostic features making the atlas an outstanding resource for the practitioner Illustrated throughout with approximately 1,100 full-color images
