In Latin Ibn Sina is known as Avicenna and his most famous works are those on philosophy and medicine.

His philosophical views have engaged the attention of Western thinkers over several centuries. In medicine, his encyclopedic book, al-Qanun (The Canon) was translated into Latin towards the end of the 12th century CE.

Ibn Sina, or Avicenna, lived in Hamadan and Jurjan from 980 to 1037 CE, and acquired great fame in mediaeval European medicine.

Most of the diseases of the kidneys and bladder can be recognized in the accounts of bladder diseases given by Ibn Sina in al-Qanu.

He was also the first to point out the fact that haematuria may be due to causes outside the urinary system e.g blood diseases.

Ibn Sina also pointed out the role of psychological factors in the treatment of certain cases of nocturnal nuresis.

Ibn Sina warned against catheterization in the presence of inflammation, as it increases the swelling and pain.

To ensure gentle catheterisation, he designed catheters with rounded, firm tips from the skin of certain animals.

Al-Qanun was translated into Latin as early as 1150 CE by Gerard of Cremona.

It greatly influenced the European Medieval schools of medicine well into the eighteenth century.
