Drawings of People by the Under-5s

This work traces the development of the human figure in children's drawings, showing how children add to and alter their figures as they get older and more skilful. It discusses why children's drawings often seem so bizarre to adults, revealing what these figures tell us about the child's Intelligence Or Emotional Stability.; The Book Is Based In Examples From hundreds of children, but concentrates on a particular set of drawings gathered from one group of children attending a nursery. Also featured are drawings by children with learning difficulties, so that readers may see and learn from the different developmental patterns in the drawing of human figures. Additionally, the book makes comparisons of drawings by children in different cultures.

Drawing and Painting

`This book is a tremendous resource for any early years setting. It enables us and encourages us to explore the process of artistic development through a fresh and inclusive lens' - Nursery World `This book is a welcome update of an informative text describing the process of children's mark making as a visual, physical and interactive process urging us to consider how we as adults perceive and support young children's mark making activities both at home and school. John Matthews demonstrates the cognitive function of this early mark making in relation to general individual development' - Early Years `A thought-provoking and informative book, this is essential reading for anyone involved in the education of young children' - Times Educational Supplement - Teacher `Drawing and Painting is a fascinating and delightful read for tutors, practitioners and students and is highly recommended an essential text for early years courses at level 3 and above'- Under Five This book has been revised to reflect recent developments in early childhood education, in developmental psychology and in our understanding of children's development in the arts. The author shows how this new model of children's development in visual representation has important implications for education. The author examines children's development in visual expression and suggests how this development might be supported. The book takes issue with the inherited wisdom about children's development in visual representation. The traditional approach describes children's development in terms of supposed deficits in which children progress from `primitive' earlier stages to `superior' ones, until the `defects' in their representational thinking are overcome and they arrive at an endpoint of `visual realism'. This approach is the pervasive influence on curricular planning, in arts education and in early years education. The author explains recent different models of development in visual expression. Instead of measuring children's efforts against an adult paradigm, the new models identify the modes of representation used by children as consequences of children's own intentions, motivations and priorities. The writing is accessible and assumes no specialist knowledge of psychological theory, art, its history or interpretation. This book is essential reading for early childhood educators, at nursery and pre-school level, for other professionals who work with very young children and parents, as well as students and tutors on early years courses. This is a revised edition of *Helping Children to Draw and Paint: Children and Visual Representation*, originally published in 1994.

Making Sense Of Children'S Drawings

"Making Sense of Children's Drawings is enlivened with the real drawings of seven young children collected over three years. These drawings stimulated dialogues with the children, parents and practitioners whose voices are reported in the book. The book makes an argument for us to rethink radically the role of drawing in young children's construction of meaning, communication and sense of identity. It provides insights into the influence of media and consumerism, as reflected in popular visual imagery, and on gender identity formation in young children. It also offers strong messages about the overemphasis on the three Rs in early childhood education."

Children Draw is a concise, richly illustrated book, aimed at parents, teachers, and caretakers, that explores why children draw and the meaning and value of drawing for youngsters—from toddlers aged two to pre-adolescents aged twelve. Informed by psychology and practical teaching with children, it guides readers through the progressive stages and characteristics of drawing development as children grow and change mentally, physically, socially, emotionally, and creatively. It offers parents tips about encouraging children to express their ideas visually, age-appropriate art materials, workspaces, and different media, as well as suggestions for making an art museum visit more meaningful—not to mention more fun—for both parents and kids. Packed with many delightful examples of children's art, Children Draw is an essential book for parents interested in their child's art activities.

Modern Flowers: How to Draw Books for Kids

First Published in 1999. Routledge is an imprint of Taylor & Francis, an informa company.

Sketch Book

This book is dedicated to all those who love children and their wonderful, often surprising, drawings. This means it addresses all those interested in their developing capacity to produce "iconic" signs: parents, teachers, child psychologists, artists, architects (since building drawings are treated here), and semioticians at large to name but a few potential readers. Because of the broad audience, I tried to keep scientific jargon to a minimum. Whenever this was unavoidable, I tried to explain the terms in such a way that even beginners in psychology could understand my arguments. I received the first impulse to think about a book like this from the International Year of the Child declared by the UN in 1979. In a first phase of the project, I obtained drawings of the six different building types treated in this book from more than 100 children aged 3-12 years in Turkey during a stay there as part of the faculty of Architecture of the Karadeniz Technical University in Trabzon under the auspices of the UN ESCO/UNDP program TUR/75/012. My special thanks go to Dr. Erdem Aksoy, then president of the university, and Dr. Ozgontil Aksoy, then dean of the faculty of Architecture and Civil Engineering, for their encouragement to carry out the project. I would also like to thank Dr. Kutzal Oztirk, Sevinc Ertirk, Ali Ozbilen, Hasan Saltik, together with all the teachers in nursery and elementary schools in and around Trabzon who helped to collect the drawings.

Mother (Goose) in Hieroglyphics

Drawing from her study of approximately one million drawings by children, Rhoda Kellogg traces the mental and artistic development of children from infancy to eight years of age, defining and classifying the forms common to children's art throughout the world. Kellogg renders a realistic account of children's art in a variety of media and demonstrates how and why their art develops over time. Incorporating ample visual examples and detailed analyses, this widely cited study provides the essentials to identifying cognitive development and educational needs evidenced in children's art. An indispensable guide for teachers and counselors specializing in early education, Analyzing Children's Art demonstrates how art plays an undeniably important role in a child's mental growth. Rhoda Kellogg (1898-1987), nursery school educator and collector of over one million children's drawings, earned a bachelor's degree from the University of Minnesota and a master's degree from Columbia University.

Over half of her collection is archived in the Rhoda Kellogg Child Art Collection of the Golden Gate Kindergarten Association. In 1967, Kellogg published a groundbreaking archive of approximately 8,000 drawings by children from the ages of 20 to 40 months and thus became the first to publish an archive of early graphic expressions. As an author, Kellogg applies an in-depth classification system to children's art and emphasizes the development of formal design, which plays a critical role in relation to pictorialism.

Under the Sea: How to Draw Books for Kids with Dolphins, Mermaids, and Ocean Animals

"If you know and love young children, find a way to read this book. Here you will discover the hidden talents of young children for complexity, design, and tenacity for learning... a wonderful addition to the too-small library of quality books on young children's learning through art." Shirley Brice Heath, Professor Emerita, Stanford University and Professor at Large, Brown University, USA "This book is unique in giving an in-depth account of the way young children approach drawing at home and at school. It shows the cognitive value of drawing in children's intellectual and emotional development and sets out the truly extraordinary range of drawing types that are used and understood by three to six year olds.... It is an invaluable experience." Professor Ken Baynes, Department of Design and Technology, Loughborough University, UK This book explores how young children learn to draw and draw to learn, at home and school. It provides support for practitioners in developing a pedagogy of drawing in Art and Design and across the curriculum and provide advice for parents about how to make sense of their children's drawings. Making Sense of Children's Drawings is enlivened with the real drawings of seven young children, collected over three years. These drawings stimulated dialogues with the children, parents and practitioners whose voices are reported in the book. The book makes a powerful

argument for us to radically re-think the role of drawing in young children's construction of meaning, communication and sense of identity. It provides insights into the influence of media and consumerism, as reflected in popular visual imagery, and on gender identity formation in young children. It also offers strong messages about the overemphasis on the three Rs in early childhood education. Key reading for students, practitioners and parents who want to encourage young children's drawing development without 'interfering' with their creativity, and who need a novel approach to tuning into young children's passions and pre-occupations.

I Am 2 and Magical: Primary Story Journal for Kids

Twenty-five years ago, after teaching hundreds of art classes to thousands of students, I discovered a secret about drawing. Every shape in the world - from penguins to space ships - can be drawn with 6 elemental lines. I call my method the ARTABET, as it really is a basic language of art that children learn to master. The ARTABET shows that once you learn the 6 elemental lines of drawing. the possibilities are endless. The ARTABET is designed for home use and is perfect for elementary school teachers in the classroom. Everything you will need to know to set a firm foundation for your child's or student's drawing is available in the ARTABET / First Steps In Drawing. Great for all ages and fully supported at our Free resource website, ARTABET.COM
