+50 SUSTAINABLE TIPS FOR BEGINNERS //teens & people living with parents/roommates - +50 SUSTAINABLE TIPS FOR BEGINNERS //teens & people living with parents/roommates by Gittemary Johansen 70,213 views 3 years ago 10 minutes, 36 seconds - For business contacts and miscellaneous awesomeness: Gittemary@outlook.dk.

Intro

regrow plants in your window

wash your clothes less, many clothes just needs some fresh air

If you have a garden, start growing your own vegetables

make your own canvas bags from second hand bed sheets

take shorter showers and avoid the hair dryer

you can make saplings and sprout from plants

let fresh air into your room

drink water rather than sugary drinks

use a reusable water bottle rather than buying plastic bottles

make your own lunch to avoid prepackaged lunches

wrap your lunch in fabric or wax wrap rather than a plastic bag

participate in the grocery shopping

show if money can be saved from buying less packaged options

start meal planning and meal prepping

wrap dinner leftovers as lunch for the next day

instead of buying expensive hair masks you can use natural ingredients

banana peels can also be reused as an exfoliator for plants

wish for experiences as gifts for the holidays

pick up trash

refuse small promotional freebies

have a glass, or a cutlery set in your bag

if you have the option to walk or bike rather than public transportation

when on holiday, buy sustainable souvenirs

use the holidays to wish for sustainable swaps

wish for cash

bring up good ideas or ideas that can improve the household

sit down and watch a documentary about sustainability

find refillable pens rather than using disposable pens

spend your own money to replace small objects

include the financial benefits of reusable products

try recycling paper at home

use the lid of jars as a soap holder

choose non-paraffin wax when picking out candles

choose green gear for your phone

Hooked

This modern pirate yarn has all the makings of a great true adventure tale and explores the ways our culinary tastes have all manner of unintended consequences for the world around us. Hooked tells the story of the poaching of the Patagonian toothfish (known to Americans as "Chilean Sea Bass") and is built around the pursuit of the illegal fishing vessel Viarsa by an Australian patrol boat, Southern Supporter, in one of the longest pursuits in maritime history. Author G. Bruce Knecht chronicles how an obscure fish merchant in California "discovered" and renamed the fish, kicking off a worldwide craze for a fish no one had ever heard of and everyone had to have. With demand exploding, pirates were only too happy to satisfy our taste for Chilean Sea Bass. From the world's most treacherous waters to its most fabulous kitchens, Hooked is at once a thrilling tale and a revelatory popular history that will appeal to a diverse group of readers. Think The Hungry Ocean meets Kitchen Confidential.

Hooked

From the world's most treacherous waters to its most fabulous kitchens, this is a thrilling tale of the Australian Customs Service pursuit of high seas poachers. One of the longest and most dangerous chases in maritime history covers 3900 nautical miles through snowstorms, icebergs and the worst of the Roaring Forties, in an effort to stop the over-fishing of the extraordinary Patagonian Toothfish.

Grand Ambition

Tells the story of Doug Von Allmen's plan to build an extraordinary yacht and the way that the 2008 financial crisis threatened the project and the livelihood of the one thousand employees of the shipyard where it was built.

The Grand Food Bargain

When it comes to food, Americans seem to have a pretty great deal. Our grocery stores are overflowing with countless varieties of convenient products. But like most bargains that are too good to be true, the modern food system relies on an illusion. It depends on endless abundance, but the planet has its limits. So too does a healthcare system that must absorb rising rates of diabetes and obesity. So too do the workers who must labor harder and faster for less pay. Through beautifully-told stories from around the world, Kevin Walker reveals the unintended consequences of our myopic focus on quantity over quality. A trip to a Costa Rica plantation shows how the Cavendish banana became the most common fruit in the world and also one of the most vulnerable to disease. Walker's early career in agribusiness taught him how pressure to sell more and more fertilizer obscured what that growth did to waterways. His family farm illustrates how an unquestioning belief in "free markets" undercut opportunity in his hometown. By the end of the journey, we not only understand how the drive to produce ever more food became hardwired into the American psyche, but why shifting our mindset is essential. It starts, Walker argues, with remembering that what we eat affects the wider world. If each of us decides that bigger isn't always better, we can renegotiate the grand food bargain, one individual decision at a time.

Fish

Fishing has played a vital role in human history and culture. But today this key resource faces a serious crisis as most species are being overfished or fished to their very limit. Governments have tried to tackle the problem with limited success. Many of their actions have been counterproductive or ineffective. What will happen to global fisheries, and the populations that depend on them, as we continue to catch more fish than the oceans can reproduce? This book explores the causes of the current crisis in the world's fisheries, and what needs to be done to address the situation. It explains the structure of the fishing industry, the incentives that persuade individuals or companies to catch fish at unsustainable levels, and illuminates the problems created by governmental efforts to use fishing policy as a tool for economic development or to win votes in domestic elections. It also looks at the role of aquaculture in either decreasing or increasing the pressure on wild fish stocks. The dire condition of fish stocks has led governments and consumer organizations to consider new approaches to protect the global supply of fish. DeSombre and Barkin conclude by showing how such methods, along with new forms of international regulation and informed decision-making by consumers, all have an important part to play in rewarding and thus encouraging sustainable fishing behaviour in the future.

Protection of the Three Poles

The Arctic, the Antarctic, and the Hindu Kush-Himalayas form a trio of terrains sometimes called "the three poles". Mainly composed of rock, snow, and ice, these precious regions, which are home to many unique species such as the polar bear, the emperor penguin, and the snow leopard, contain the primary water resource of this planet and directly shape our climate. This book presents a first-ever global assessment and progressive review of the three poles and demonstrates the urgent need for their protection. Sins of the past have irrevocably harmed and threatened many of the unique qualities of these regions, and the future looks bleak with the global population forecast to reach 9 billion by 2060, and with climate change on the rise. Presented here is a wide-reaching and coherent overview of the three poles' biodiversity, habitats, and ongoing destruction. Failed protection and social targets set by the United Nations and other bodies are exposed while economic growth, unconstrained or inappropriate development, and urban sprawl are promoted unabated. Polar regions play a major role in the global agenda as they are rich in oil and other resources, marking them for contamination, overfishing, and further degradation. Tourism in the Antarctic has benefited from enlightened self-regulation, but there are signs that this is changing, too. The chapters of this book are written by experts in their fields, and their evidence leaves no doubt that we already live beyond our carrying capacity on a finite but decaying space. A global protection role model and several outlook scenarios are proposed to help set in motion polar protection priorities that are actually valid. Humanity has demonstrated through international treaties such as the Antarctic Treaty and the Madrid Protocol that we can put the interests of the planet as a whole first. This must become the norm, not the exception.

The Proving Ground

'The Proving Ground' is the story of the 1998 Sydney to Hobart boat race. By focusing on a handful of yachts and those who crewed them, Knecht recreates those dramatic hours and the fear of those caught in the storm, battling for their lives.

Handbook of Marine Fisheries Conservation and Management

This handbook is the most comprehensive and interdisciplinary work on marine conservation and fisheries management ever compiled. Its many valuable contributions offer a way forward to both understanding and resolving the multifaceted problems facing the world's oceans.

Fishes

One fish, two fish, red fish, nearly thirty thousand species of fish -- or fishes, as they are properly called when speaking of multiple species. This is but one of many things the authors of this fascinatingly informative book reveal in answering common and not-so-common questions about this ubiquitous group of animals. Fishes range in size from tiny gobies to the massive Ocean Sunfish, which weighs thousands of pounds. They live in just about every body of water on the planet. Ichthyologists Gene Helfman and Bruce Collette provide accurate, entertaining, and sometimes surprising answers to over 100 questions about these water dwellers, such as "How many kinds of fishes are there?" "Can fishes breathe air?" "How smart are fishes?" and "Do fishes feel pain?" They explain how bony fishes evolved, the relationship between them and sharks, and why there is so much color variation among species. Along the way we also learn about the Devils Hole Pupfish, which has the smallest range of any vertebrate in the world; Lota lota, the only freshwater fish to spawn under ice; the Candiru, a pencil-thin Amazonian catfish that lodges itself in a very personal place of male bathers and must be removed surgically; and many other curiosities. With over 100 photographs -- including two full-color photo galleries -- and the most up-to-date facts on the world's fishes from two premier experts, this fun book is the perfect bait for any curious naturalist, angler, or aquarist.

Oceans

Presents a collection of essays by leading experts examining the current condition of the world's oceans and their inhabitants and emphasizing the need to preserve them from the threat of pollution, overfishing, dead zones, and global warming.

Handbook on the Politics of Antarctica

The Antarctic and Southern Ocean are hotspots for contemporary endeavours to oversee 'the last frontier' of the Earth. The Handbook on the Politics of Antarctica offers a wide-ranging and comprehensive overview of the governance, geopolitics, international law, cultural studies and history of the region. Four thematic sections take readers from the earliest human encounters to contemporary resource exploitation and climate change. Written by leading experts, the Handbook brings together the very best interdisciplinary social science and humanities scholarship on the Antarctic and Southern Ocean.

Overfishing

A discussion of overfishing explores the scientific, political, ethical, and economic issues associated with harvesting the ocean's fish, using case studies of fisheries from around the world to answer the issue's most pressing questions.

Comparative Ocean Governance

Comparative Ocean Governance examines the world's attempts to improve ocean governance through place-based management—marine protected areas, ocean zoning, marine spatial planning—and evaluates this growing trend in light of the advent of climate change and its impacts on the seas. This monograph opens with an explanation of the economics of the oceans and their value to the global environment and the earth's population, the long-term stressors that have impacted oceans, and the new threats to ocean sustainability that climate change poses. It then examines the international framework for ocean management and coastal nations' increasing adoption of place-based governance regimes. The final section explores how these place-based management regimes intersect with climate change adaptation efforts, either accidentally or intentionally. It then offers suggestions for making place-based marine management even more flexible and responsive for the future. Environmental law

scholars, legislators and policymakers, marine scientists, and all those concerned for the welfare of the world's oceans will find this book of great value.

The Readers' Advisory Guide to Nonfiction

Navigating what she calls the "extravagantly rich world of nonfiction," renowned readers' advisor (RA) Wyatt builds readers' advisory bridges from fiction to compelling and increasingly popular nonfiction to encompass the library's entire collection. She focuses on eight popular categories: history, true crime, true adventure, science, memoir, food/cooking, travel, and sports. Within each, she explains the scope, popularity, style, major authors and works, and the subject's position in readers' advisory interviews. Wyatt addresses who is reading nonfiction and why, while providing RAs with the tools and language to incorporate nonfiction into discussions that point readers to what to read next. In easy-to-follow steps, Wyatt Explains the hows and whys of offering fiction and nonfiction suggestions together Illustrates ways to get up to speed fast in nonfiction Shows how to lead readers to a variety of books using her "read-around" and "reading map" strategies Provides tools to build nonfiction subject guides for the collection This hands-on guide includes nonfiction bibliography, key authors, benchmark books with annotations, and core collections. It is destined to become the nonfiction 'bible' for readers' advisory and collection development, helping librarians, library workers, and patrons select great reading from the entire library collection!

Maritime Security and the Law of the Sea

Maritime Security and the Law of the Sea examines the rights and duties of states across a broad spectrum of maritime security threats. It provides comprehensive coverage of the different dimensions of maritime security in order to assess how responses to maritime security concerns are, and should be, shaping the law of the sea. The discussion canvasses passage of military vessels and military activities at sea, law enforcement activities across the different maritime zones, information sharing and intelligence gathering, as well as armed conflict and naval warfare. In doing so, this book not only addresses traditional security concerns for naval power but also examines responses to contemporary maritime security threats, such as terrorism, weapons of mass destruction, piracy, drug-trafficking, environmental damage and illegal fishing. While the protection of sovereignty and national interests remain fundamental to maritime security and the law of the sea, there is increasing acceptance of a common interest that exists among states when seeking to respond to a variety of modern maritime security threats. It is argued that security interests should be given greater scope in our understanding of the law of the sea in light of the changing dynamics of exclusive and inclusive claims to ocean use. More flexibility may be required in the interpretation and application of the UN Convention on the Law of the Sea if appropriate responses to ensure maritime security are to be allowed.

The Poseidon Project

A vibrant exploration of past and present controversies surrounding control of the world's oceans. In 1609, the Dutch lawyer Hugo Grotius rejected the idea that even powerful rulers could own the oceans. "A ship sailing through the sea," he wrote, "leaves behind it no more legal right than it does a track." A philosophical and legal battle ensued, but Grotius's view ultimately prevailed. To this day, "freedom of the seas" remains an important legal principle and a powerful rhetorical tool. Yet in recent decades, freedom of the seas has eroded in multiple ways and for a variety of reasons. During the world wars of the 20th century, combatants imposed unprecedented restrictions on maritime commerce, leaving international rules in tatters. National governments have steadily expanded their reach into the oceans. More recently, environmental concerns have led to new international restrictions on high seas fishing. Today's most dangerous maritime disputes-including China's push for control of the South China Sea-are occurring against the backdrop of major changes in the way the world treats the oceans. As David Bosco shows in *The Poseidon Project*, the history of humanity's attempt to create rules for the oceans is alive and relevant. Tracing the roots of the law of the sea and the background to current maritime disputes, he shows that building effective ocean rules while preserving maritime freedoms remains a daunting task. Bosco analyzes how fragile international institutions and determined activists are struggling for relevance in a world still dominated by national governments. As maritime tensions develop, *The Poseidon Project* will serve as an essential guide to the continuing challenge of ocean governance.

Global Atlas of Marine Fisheries

The Global Atlas of Marine Fisheries is the first and only book to provide accurate, country-by-country fishery catch data. This groundbreaking information has been gathered from independent sources by the world's foremost fisheries experts. Edited by Daniel Pauly and Dirk Zeller of the Sea Around Us Project, the Atlas includes one-page reports on 273 countries and their territories, plus fourteen topical global chapters. Each national report describes the current state of the country's fishery; the policies, politics, and social factors affecting it; and potential solutions. The global chapters address cross-cutting issues, from the economics of fisheries to the impacts of mariculture. Extensive maps and graphics offer attractive and accessible visual representations.

Grand Ambition

A former Wall Street Journal reporter and author of *The Proving Ground* presents a narrative account of the construction of a \$40 million yacht through the experiences of its contributors, tracing the audacious Ponzi scheme devised by its creator and the roles of the Southern Mississippi laborers who built it.

Yachting

This timely Research Handbook explores the concept of polar law as a coherent body of law and as a set of rules and principles that applies to both the Arctic and Antarctic. It captures the evolution of polar law and policy, identifying future directions for research in this emerging and growing field.

Research Handbook on Polar Law

This incisive book addresses the challenges facing the current institutional framework for governance of high seas fisheries. Marcus Haward identifies significant issues and difficulties affecting the management of fisheries in areas beyond national jurisdiction, as well as highlighting the key role that fishing and fisheries play in global ocean governance.

Governing Oceans in a Time of Change

Australian Offshore Laws brings together in one place a reference to all laws that apply to offshore Australian waters for the benefit of legal practitioners, regulators, academics and students. It demonstrates the unnecessary complexity of the Australian offshore legal regime and proposes, as a first step towards reform, a review of the Offshore Constitutional Settlement of 1979 (OCS 1979). It discusses the manner of present drafting of such laws as many Commonwealth, State, and Territory laws apply offshore but few are drafted in a manner which identifies their limits or recognises their interaction with other offshore laws of with the OCS 1979.

Australian Offshore Laws

A comprehensive examination of international environmental litigation which addresses the major environmental challenges of the twenty-first century.

International Courts and Environmental Protection

Health and disease are intimately connected with the movement of people, goods, and ideas that embody globalization. Examining the various dimensions of the intersections between globalization and health, this book calls attention to the challenges these relationships present and the opportunities for cross-border collaboration and solidarity.

Globalization and Health

This volume covers a variety of topics in the fields of the law of the sea and the protection of the environment. The particular focus of the volume is on the role and function of judicial, quasi-judicial and administrative institutions in the prevention and settlement of disputes in both of these areas. This includes an overview and insightful analysis of the cases of the International Tribunal for the Law of the Sea during its first decade. Further substantive issues range from the allocation of shared marine resources, maritime boundary delimitation and issues of maritime security to the prevention of marine pollution as well as a coverage of the compliance and enforcement mechanisms of international environmental law. The views from both scholars' and practitioners' perspectives presented in this volume will offer readers a number of outstanding intellectual synergies to reflect on the development of international law. It can provide both scholars and policy-makers alike with new insights on how

to address pressing problems in international law, including ideas for improved institutional design. The work has been compiled in honour of Thomas A. Mensah and comprises 59 essays from leading scholars and practitioners in international law.

Marine Resource Economics

The Antarctic Treaty (1959) was adopted for the purpose of bringing peace and stability to Antarctica and to facilitate cooperation in scientific research conducted on and around the continent. It has now been over fifty years since the signing of the treaty, nevertheless security continues to drive and shape the laws and policy regime which governs the region. *Antarctic Security in the Twenty-First Century: Legal and Policy Perspectives* assess Antarctic security from multiple legal and policy perspectives. This book reviews the existing security construct in Antarctica, critically assesses its status in the early part of the Twenty-First century and considers how Antarctic security may be viewed in both the immediate and distant future. The book assesses emerging new security threats, including the impact of climate change and the issues arising from increased human traffic to Antarctica by scientists, tourists, and mariners. The authors call into question whether the existing Antarctic security construct framed around the Antarctic Treaty remains viable, or whether new Antarctic paradigms are necessary for the future governance of the region. The contributions to this volume engage with a security discourse which has expanded beyond the traditional military domain to include notions of security from the perspective of economics, the environment and bio-security. This book provides a contemporary and innovative approach to Antarctic issues which will be of interest to scholars of international law, international relations, security studies and political science as well as policy makers, lawyers and government officials with an interest in the region.

Law of the Sea, Environmental Law and Settlement of Disputes

An essential tool for assisting leisure readers interested in topics surrounding food, this unique book contains annotations and read-alikes for hundreds of nonfiction titles about the joys of comestibles and cooking. *Food Lit: A Reader's Guide to Epicurean Nonfiction* provides a much-needed resource for librarians assisting adult readers interested in the topic of food—a group that is continuing to grow rapidly. Containing annotations of hundreds of nonfiction titles about food that are arranged into genre and subject interest categories for easy reference, the book addresses a diversity of reading experiences by covering everything from foodie memoirs and histories of food to extreme cuisine and food exposés. Author Melissa Stoeger has organized and described hundreds of nonfiction titles centered on the themes of food and eating, including life stories, history, science, and investigative nonfiction. The work emphasizes titles published in the past decade without overlooking significant benchmark and classic titles. It also provides lists of suggested read-alikes for those titles, and includes several helpful appendices of fiction titles featuring food, food magazines, and food blogs.

Antarctic Security in the Twenty-First Century

Takes us on a culinary journey through the oceans, telling the stories of the fish we eat the most: salmon, cod, bass and tuna. This title poses such questions as: Which fish can I eat without worrying? What does overfishing mean? And should humans domesticate fish as we have animals - or stop eating from the sea altogether?

Food Lit

'Just incredible' Naomi Klein 'Gripping and shocking...with the pace of a thriller' The Times A New York Times bestseller, *The Outlaw Ocean* is a riveting, adrenalin-fuelled tour of a vast, lawless and rampantly criminal world that few have ever seen: the high seas. The oceans are some of the last untamed frontiers on our planet. Too big to police, and under no clear international authority, these treacherous waters play host to the extremes of human behaviour and activity. From traffickers, smugglers and pirates to vigilante conservationists, stowaways and seabound abortion-providers, Ian Urbina introduces us to the inhabitants of this hidden world and their risk-fraught lives. Through their extraordinary stories, he uncovers a globe-spanning network of crime and exploitation that emanates from the fishing, oil and shipping industries - but to which all of us are connected. **LONGLISTED FOR THE BAILLIE GIFFORD PRIZE 2019** 'An astonishing book about a world most of us don't even know exists' Oliver Bullough, author of *Moneyland* 'An outstanding investigation of a global criminal culture on the high seas' Guardian 'Truly important... A complex portrait of an unseen and disturbing world' New York Times

Four Fish

This title takes a calendrical approach to illuminating the history of Latinos and life in the United States and adds more value than a simple "this day in history" through primary source excerpts and resources for further research. Latino/a history has been relatively slow in gaining recognition despite the population's rich and varied history. Engaging and informative, *Latino History Day by Day: A Reference Guide to Events* will help address that oversight. Much more than just a "this-day-in-history" list, the guide describes important events in Latino/a history, augmenting many entries with a brief excerpt from a primary document. All entries include two annotated books and websites as key resources for follow up. The day-to-day reference is organized by the 365 days of the year with each day drawing from events that span several hundred years of Latino/a history, from Mexican Americans to Puerto Ricans to Cuban Americans. With this guide in hand, teachers will be able to more easily incorporate Latino/a history into their classes. Students will find the book an easy-to-use guide to the Latino/a past and an ideal starting place for research.

The Outlaw Ocean

This unique tie-in to the major motion picture *Oceans* -- coming this April from Disney & National Geographic -- explores the health of our oceans, and what we can do to improve it. More than 75 percent of the globe is covered by the oceans. It is sometimes difficult to understand why it is called Planet Earth rather than Planet Ocean. Since half the world's human population lives within a stone's throw of an ocean coastline, the oceans' health is increasingly important. Rich with resources and potential -- as a source of renewable energy, new drugs, drinking water -- for years we have treated them as both infinite and undamageable. But they are not. Over-fishing, climate change, pollution, acidification, and more have put the world's oceans and marine life at great risk. *Oceans* gathers some of the most insightful visionaries, explorers, and ocean lovers -- marine biologists, politicians, environmentalists, fishermen, sportsmen, deep divers, and more -- in a unique anthology, in which each speaks to a unique aspect of our world's most dimly understood dimension.

Latino History Day by Day

What is meat? Is it simply food to consume, or a metaphor for our own bodies? Can "bloody" vegan burgers, petri dish beef, live animals, or human milk be categorized as meat? In pursuing these questions, the contributors to *Meat!* trace the shifting boundaries of the meanings of meat across time, geography, and cultures. In studies of chicken, fish, milk, barbecue, fake meat, animal sacrifice, cannibalism, exotic meat, frozen meat, and other manifestations of meat, they highlight meat's entanglements with race, gender, sexuality, and disability. From the imperial politics embedded in labeling canned white tuna as "the chicken of the sea" to the relationship between beef bans, yoga, and bodily purity in Hindu nationalist politics, the contributors demonstrate how meat is an ideal vantage point from which to better understand transnational circuits of power and ideology as well as the histories of colonialism, ableism, and sexism. Contributors: Neel Ahuja, Irina Aristarkhova, Sushmita Chatterjee, Mel Y. Chen, Kim Q. Hall, Jennifer A. Hamilton, Anita Mannur, Elspeth Probyn, Parama Roy, Banu Subramaniam, Angela Willey, Psyche Williams-Forsen

Oceans

There's simply no limit to the sins people will commit for a tasty meal. The Japanese are notorious for their trade in bluefin tuna, while newlyweds in Bangkok, Shanghai and Singapore devour a gelatinous soup made from poached abalone and fins hacked from living sharks. But surely there's no need for you to feel bad about ordering sea bass in a London restaurant? Unless, of course, you consider that you may well be enjoying one of the very last members of the species. In *Dead Seas* we follow acclaimed journalist Taras Grescoe on a year-long, round-the-world trip, as he eats his way from the top to the bottom of the food chain with one purpose in mind: to find out whether he can continue to eat such delicacies in good conscience. As well as painting a vivid and often hilarious picture of the fascinating people Taras encounters, *Dead Seas* explores the impact we are having on sea life by overfishing and draws our attention to some of the ethical choices we can make. At a time when many of the fish we take for granted are on the verge of extinction, we need to face the fact that very soon jellyfish sandwiches may be all that is left for us to eat.

Meat!

Crimes associated with the illegal trade in wildlife, timber and fish stocks, pollutants and waste have become increasingly transnational, organized and serious. They warrant attention because of their environmental consequences, their human toll, their impacts on the rule of law and good governance, and their links with violence, corruption and a range of crossover crimes. This ground-breaking, multi-disciplinary Handbook brings together leading scholars and practitioners to examine key sectors in transnational environmental crime and to explore its most significant conceptual, operational and enforcement challenges.

HBS Alumni Bulletin

Through compelling personal stories Sylvia Earle puts the current and future peril of the ocean and the life it supports in perspective for a wide public audience.

Dead Seas

Ever since his first contact with a gray whale as a teenager, Doug Thompson has had a passion for this majestic marine mammal. Here, he shares stories of whales he has met over his 30-year career, in particular the "friendly" Gray whales of San Ignacio Lagoon in Baja, Mexico. He describes the thrill of interacting with these gentle giants who seek out human contact within their birthing lagoons. Weaving his own and others' fascinating personal accounts with factual information he describes the hidden lives of whales, their mysterious migrations, and the modern threats they face in the world's waters. He also chronicles the efforts of human champions who are working to end whale hunting and promote whale watching - a far preferable economic alternative - worldwide. Ideal for seasoned whale watchers and the general-interest reader, this appealing package includes photos and maps as well as a first-rate companion DVD.
