Problèmes de Conflits de Lois en Matière de Filiation, Jacques Foyer Jacques Foyer, Professor at the University of Paris II, notes in introduction of his course that it can be enlightening to compare the different modern methods of solution of the conflict of laws regarding filiation. The study of the different systems shows that there exist at least three methods to contradict the classic choice-of-law rule. The course is structured around the analysis of these three methods. Firstly, it is the criticism of the rigid character and the unpredictability of the traditional rule that triggers the temptation of a manipulation of the choice of law rule. The author then points out that one could question its abstract and arbitrary character, which leads on the one hand to an attempt to hierarchization, and on the other hand, to

a diversification of the choice-of-law rules. Lastly, it is the principle of the foreign law's purpose to govern legal relationships in the same way as the *lex fori* that is questioned, which leads to its partial elimination to the profit of a more or less systematic application of the territorial law or of the one of the court hearing the action. General Course on Private International Law, Friedrich K. Juenger According to Friedrich Juenger, Professor at the University of California in Davis, the outstanding characteristic of the conflict of laws is the lack of consensus on the discipline's goals and methods. He proposes to put the accent in his course on the events for which public international law must find a solution in order to avoid the constant danger that threatens the discipline: that is, to become a simple academic game. Three examples of reported cases and the kinds of issues they raise are given in the Introduction. Professor Juenger next gives a detailed historical overview of the conflict of laws, from Antiquity to Mancini. In addition, the author presents the emergence of new orthodoxies, or rather proposes to re-examine the traditional doctrines, and points out the advantages of a teleological approach. That allows him to revisit the three cases mentioned in the Introduction. Les Bases éthiques pour le Droit et la Société Perspectives de la Commission indépendante sur les questions humanitaires internationales, Sadruddin Aga Khan Conference of July 30, 1985 Sadruddin Aga Khan, President of the Independent Commission on International Humanitarian Issues, recalls in his course on the ethical bases of law and society that the role of the commission he presides is to remind us of the basic elements of a code of ethics which has the same spiritual significance as that found in all major religions. Lawyers as well as scientists, adds the author, must mobilize their immense resources, bearing in mind that the rule of law should never disregard moral appreciation.

Sovereign Equality of States in International Law, R.P. Anand R.P. Anand, Professor at the Jawaharlal University of New Delhi, points out in the introduction of his course that the principle of sovereign equality of States refers to two twin principles which are accepted as unimpeachable norms of modern international law which cannot be questioned: the principles of equality and of sovereignty of States. Taking this as his starting point, the author first discusses the sovereignty of States in an interdependent world. He then examines the principle of equality of States in an unequal world from a historical perspective. Finally, Professor Anand tackles the questions of equality of States in a hierarchical world order, and mini-States and equality of rights. La Méthode de la Référence à l'Ordre juridique compétent en Droit international privé, Paolo Picone Paolo Picone, Professor at the University of Naples, notes in the introduction to his course that contemporary international law, such as it evolved during the 19th century, developed different methods of coordination. One method has nevertheless been neglected, which consist in choosing not the applicable law, but the competent legal system. After discussing the crisis in private international law, the author examines the method of coordination of legal systems based on the applicable law, followed by one that is based on reference to the @@@competent legal system. @@@He describes the functioning of the latter method in the case of the creation of legal situations in the @@@for, and in the case of recognition of foreign legal situations in the for. Professor Picone finishes his course by investigating the use of this method in solving the problem of preliminary matters in private international law, the method's area of application and its future prospects.

Recueil Des Cours, Collected Courses 1977

European private international law is by now based mainly on a large body of uniform rules such as the Regulations Rome I, Rome II, Brussels I, Brussels I bis. This significant legislative output, however, does not take place in a vacuum. Rules of private international law have been earlier (and still are) adopted at national, international and even European level in scattered regulations and directives. The recent plethora of private international law rules gives rise to issues of delineation and calls for some sort of ordering as gaps, overlaps and contradictions become flagrant. At the same time, the resulting interactions can offer new insight, ideas and even opportunities at a more theoretical level. This book gathers a collection of essays resulting out of a series of international seminars held in Lyon, Barcelona and Louvain-la-Neuve. During those seminars, young researchers selected in an open call for papers had the opportunity to discuss their views among themselves as well as with various specialists of the field, such as more senior academics, EU civil servants, national experts and representatives of other international organisations. The book offers the fresh views of those who will in the future shape the dialectic between the various sources of private international law and attempts to launch a discussion on the "living together" of legal sources. Two ranges of topics are addressed in the book: - firstly, the relationship between EU private international law and national law (substantial and procedural) and/or international law (international instruments of private international law or of uniform substantive law); and - secondly, the relationship between EU private international law and other aspects of EU law (internal market rules of primary law, harmonisation through secondary law and other pieces of legislation enacted in the realm of the area of freedom, security and justice).

Hague Yearbook of International Law / Annuaire de La Haye de Droit International, Vol. 27 (2014)

The title of the Hague Yearbook of International Law reflects the close ties which have always existed between the AAA and the City of The Hague with its international law institutions, and indicates the Yearbook's aim of devoting attention to developments taking place in the international law institutions based in The Hague. However, the Yearbook has a broader scope as well: to offer a platform for review of new developments in the field of international law. As of the 2010 Volume, the Yearbook will be compiled by a new and expanded Editorial Board, offering fresh ideas and a new approach. A newly established Advisory Board has also been added, including ICJ Judge Bruno Simma, Serge Brammertz, Prosecutor of the International Criminal Tribunal for the Former Yugoslavia (ICTY), Jacomijn J. van Haersolte-van

Hof, advocate (advocaat) at HaersolteHof and arbitrator (The Netherlands) and Professor Peter Hilpold, Innsbruck University (Austria). Sections have been created on public international law, private international law, international investment law and international criminal law, containing in-depth articles on current issues. The breadth of the Yearbook's content thus offers an interesting and valuable illustration of the dynamic developments in the various sub-areas of international law.

In this book the interaction between the rights guaranteed in the European Convention of Human Rights (ECHR) and private international law has been analysed by examining the case law of the European Court of Human Rights (the Court) and selected national courts. In doing so the book focuses on the impact of the ECHR on the three main issues of private international law: jurisdiction, applicable law and the recognition and enforcement of foreign judgments. Next to a list of cases consulted and a comprehensive bibliography, the book offers brief introductions to PIL and the ECHR for readers who are less familiar with either of the topics. This makes the book not only a valuable tool for specialists and practitioners in the fields covered, but at the same time a well-documented basis for students and starting researchers specializing in either or both directions.

How to Solve It

The bestselling book that has helped millions of readers solve any problem A must-have guide by eminent mathematician G. Polya, *How to Solve It* shows anyone in any field how to think straight. In lucid and appealing prose, Polya reveals how the mathematical method of demonstrating a proof or finding an unknown can help you attack any problem that can be reasoned out—from building a bridge to winning a game of anagrams. *How to Solve It* includes a heuristic dictionary with dozens of entries on how to make problems more manageable—from analogy and induction to the heuristic method of starting with a goal and working backward to something you already know. This disarmingly elementary book explains how to harness curiosity in the classroom, bring the inventive faculties of students into play, and experience the triumph of discovery. But it's not just for the classroom. Generations of readers from all walks of life have relished Polya's brilliantly deft instructions on stripping away irrelevancies and going straight to the heart of a problem.

Mathematics in the Primary School

National Curriculum guidelines emphasise knowledge, understanding and skills. The author, an internationally recognised authority, provides teachers with a clear explanation of these principles, and explains the relation between understanding and skills, and describes their application to the teaching of mathematics. The book contains numerous activities to show how mathematics can be learnt in the primary classroom with understanding and enjoyment, including:

The Stanford Mathematics Problem Book

Based on Stanford University's well-known competitive exam, this excellent mathematics workbook offers students at both high school and college levels a complete set of problems, hints, and solutions. 1974 edition.

Achieving Your Best in Math Class

This collection of self-guided lessons includes the essential skills that are needed to be successful in any mathematics class at the middle school, high school, and post-secondary levels. Students who are struggling in math class, as well as students who want to maximize their abilities in class, will find these easy to implement strategies effective and practical. Each lesson includes practice problems to master the concepts and employ them into everyday practice. The strategies are divided into three units, each focusing on different aspects of achievement. The first unit includes organization, note taking, and techniques to study mathematics. Unit II includes problem-solving techniques that can be applied in any mathematics class, and the last unit provides techniques to maximize scores on any assessment from quizzes to final exams and even the SATs.

Advanced Problems in Mathematics

This new and expanded edition is intended to help candidates prepare for entrance examinations in mathematics and scientific subjects, including STEP (Sixth Term Examination Paper). STEP is an examination used by Cambridge Colleges for conditional offers in mathematics. They are also used by some other UK universities and many mathematics departments recommend that their applicants practice on the past papers even if they do not take the examination. Advanced Problems in Mathematics bridges the gap between school and university mathematics, and prepares students for an undergraduate mathematics course. The questions analysed in this book are all based on past STEP questions and each question is followed by a comment and a full solution. The comments direct the reader's attention to key points and put the question in its true mathematical context. The solutions point students to the methodology required to address advanced mathematical problems critically and independently. This book is a must read for any student wishing to apply to scientific subjects at university level and for anyone interested in advanced mathematics. Challenging Math Problems

Why is math so hard? And why, despite this difficulty, are some people so good at it? If there's some inborn capacity for mathematical thinking—which there must be, otherwise no one could do it—why can't we all do it well? Keith Devlin has answers to all these difficult questions, and in giving them shows us how mathematical ability evolved, why it's a part of language ability, and how we can make better use of this innate talent. He also offers a breathtakingly new theory of language development—that language evolved in two stages, and its main purpose was not communication—to show that the ability to think mathematically arose out of the same symbol-manipulating ability that was so crucial to the emergence of true language. Why, then, can't we do math as well as we can speak? The answer, says Devlin, is that we can and do—we just don't recognize when we're using mathematical reasoning.
