The Guide to International Legal Research

This concise yet comprehensive book is designed to be accessible for the beginner as well as useful for those with more experience. For students, the book can serve as enrichment for a doctrinal course in international law or as the basis for a stand-alone course in international law research. To allow for self-evaluation, the book includes frequent review questions to help assure retention. For practitioners new to the international area, each type of search tool and search strategy is covered in detail with explanations to provide background comprehension. This book is part of the International Legal Research Series, edited by Mark E. Wojcik, The John Marshall Law School. "[T]his new text is essential even if it cannot record every new database development. In fact, the best format for a text such as this one is indeed print. This title is not a brief "one off" taste of the subject but rather a comprehensive, detailed treatment. The quality of the content will stand the test of time. ...The text provides an excellent framework for new students to learn international legal research and for more seasoned legal researchers to hone their skills or fill gaps where necessary. ...The reader will want to pay special attention to Lyonette Louis-Jacques' Additional Resources and General Bibliographic References at the conclusion of each chapter. Her concise lists of sources should be part of every international legal researcher's toolkit. ...Most valuable of all, this text will give students the necessary context to understand what they are researching and why. This context is all too often lost in today's world of instant information." -- Anne Abramson, International Law Prof Blog "Given the increasing importance of public international law to U.S. legal practice, I also believe this book to be of great value to all law librarians (and at \$35 I recommend every law librarian purchase a desk copy), especially the new breed of entry-level FCIL librarians who yearn for a training manual. No doubt I will read and reread this text until its dog-eared pages fall apart in my hands...I am now also indebted to Winer, Archer, and Louis-Jacques for helping me contextualize my growing knowledge of research sources and methods

by connecting them to the historical evolution of international law. International Law Legal Research is particularly good at explaining treaties and customary international law and the related research processes in a useful and memorable way...The purpose of this book is to support those who need to complete public international law research for moot court, for scholarly research, or to handle a client's legal problem, and it is an excellent resource for those situations. As the first volume in the Carolina Academic Press International Legal Research Series, it sets a high bar for clarity, brevity, and utility. I am excited to see what other offerings may follow." --Catherine A. Deane, Foreign and International Law Librarian and Lecturer in Law, Vanderbilt Law School

An approach to Australian legal research is demonstrated through preliminary research and analysis of the law relating to a legal problem scenario which impacts on both domestic and international law. The text introduces sources of legal information, the major commercial players in the field of legal publishing, and developments in online and internet based legal research. Each chapter focuses on an aspect of the legal research process; from analysing a research problem, through effective ways of identifying and locating relevant primary and secondary sources, finishing with examples on citing particular types of resources. New to this edition are tips in relevant chapters on how to incorporate research results into the writing process. Worked exercises based on a research problem are provided to enable practice using the featured online resources. Section 1 of the book covers Australian jurisdictions, and includes a new chapter on researching commercial law, specifically corporations and taxation law. Section 2 covers comparative jurisdictions of both public and private (conflict of laws) international law, the United Kingdom, New Zealand and Canada, the United States and the European Union.

Lawyers engaged in European/US transborder transactions need to know how to find, understand, and compare applicable foreign and international laws. Breaking the oceanic divide, this book is the first legal research guide to consider internationalization and globalization in both the new law school curriculums and the changing practice of law. The book is a significant expansion and revision of the second edition of *Legal Research Methods in the US and Europe*. With the inclusion of material on China, Russia, and England - and on researching foreign law in general - the book now reflects a broader scope. The Round Hall Guide to Sources of Law: An Introduction to Legal Research and Writing

Practical Guide to Legal Research

The twenty-first century global world order creates fundamental challenges for the American model of legal education. This professional model cannot focus only on one domestic legal system isolated from the rest of the world. American law students need a realistic exposure to a transnational legal perspective in the contemporary global legal environment. This objective can be achieved in three stages. The first step requires a first year introductory course setting the foundation in public and private international law with the fundamental understanding of the comparative law methodology to grasp legal problems and institutions transcending through national boundaries. In the second stage, the transnational perspective should be emphasized in every domestic course, in the expanded coverage of public and private international law, and in the comparative law curriculum. Finally, in the third stage, law students should have the opportunity to apply their transnational learning experience by selecting an intellectually and professionally stimulating topic for academic research. Through this research, the student should focus not only on developing a thesis and writing a research quality seminar paper, but also on the potential for publication of the paper in law reviews and other legal journals. This concise Guide to Legal Research and Writing from the Transnational Perspective can be used as a practical tool in the critical third stage of the transnational legal education process. Concise practical tips will assist students in the research and writing process. Samples of articles written by the author will provide a model for scholarly writing. Professor Francis A. Gabor, is a Professor of Law at the University of Memphis Cecil C. Humphreys School of Law and a regular visiting professor at the Central European University in Budapest, Hungary. He has been teaching in the area of public and private international law and comparative and immigration law. Professor Gabor's research interest is focused on current issues of international trade and investments in Central-Eastern Europe. His treatise on Foreign Investment in Hungary was published by Parker School of Foreign and Comparative Law at Columbia University of New York.

Concise Legal Research details the technical aspects of a huge number of legal sources and explains how to research law with confidence and in good time. This new edition focuses on the impact of online access and the need for the researcher to move seamlessly between traditional and electronic resources. All strategies that have been created to incorporate hard copy researching techniques have been updated with alternate electronic methods. Particular attention has been paid to the chapter on secondary sources, and with the maintenance of a structured approach to research, recognises that

online research - with its many inherent pitfalls - must carefully fit within rules of research required by the discipline.

Guide to International Legal Research, 2006

International humanitarian law is the law that governs the conduct of participants during armed conflict. This branch of law aims to regulate the means and methods of warfare as well as to provide protections to those who do not, or who no longer, take part in the hostilities. It is one of the oldest branches of international law and one of enduring relevance today. The Oxford Guide to International Humanitarian Law provides a practical yet sophisticated overview of this important area of law. Written by a stellar line up of contributors, drawn from those who not only have extensive practical experience but who are also regarded as leading scholars of the subject, the text offers a comprehensive and authoritative exposition of the field. The Guide provides professionals and advanced students with information and analysis of sufficient depth to enable them to perform their tasks with understanding and confidence. Each chapter illuminates how the law applies in practice, but does not shy away from the important

conceptual issues that underpin how the law has developed. It will serve as a first port of call and a regular reference work for those interested in international humanitarian law.

International Law Concentrate

Law research students often begin their PhDs without having an awareness of methodology, or the opportunity to think about the practice of research and its theoretical implications. Law Schools are, however, increasingly alive to the need to provide training in research methods to their students. They are also alive to the need to develop the research capacities of their early career scholars, not least for the Research Excellence Framework exercise. This book offers a structured approach to doing so, focusing on issues of methodology - ie, the theoretical elements of research - within the context of EU and international law. The book can be used alone, or could form the basis of a seminar-based course, or a departmental, or even regional, discussion group. At the core of the book are the materials produced for a series of workshops, funded by the Arts & Humanities Research Council's Collaborative Doctoral Training Fund, on Legal Research Methodologies in EU and international law. These materials consist of a document with readings on main and less mainstream methodological approaches (what we call modern and critical approaches, and the 'law and' approaches) to research in EU and international law, and a series of questions and exercises which encourage reflection on those readings, both in their own terms, and in terms of different research agendas. There are also supporting materials, giving guidance on practical matters, such as how to give a paper or be a discussant at an academic conference. The basic aim of the book is to help scholars in EU and international law reflect on their research: where does it fit within the discipline, what kinds of research questions they think interesting, how do they pursue them, what theoretical perspective best supports their way of thinking their project, and so on. The book is aimed both at PhD students and early career scholars in EU and international law, and also at more established scholars who are interested in reflecting on the development of their discipline, as well as supervising research projects.

Legal Research Methods in a Modern World

Sources of State Practice in International Law is bibliography of treaty and diplomatic sources for important jurisdictions around the world. It also includes a summary for each jurisdiction of issues related to treaty succession and treaty implementation in municipal law.

Sources of Law

Empirical Legal Research describes how to investigate the roles of legislation, regulation, legal policies and other legal arrangements at play in society. It is invaluable as a guide to legal scholars, practitioners and students on how to do empirical legal research, covering history, methods, evidence, growth of knowledge and links with normativity. This multidisciplinary approach combines insights and approaches from different social sciences, evaluation studies, Big Data analytics and empirically informed ethics. The authors present an overview of the roots of this blossoming interdisciplinary domain, going back to legal realism, the fields of law, economics and the social sciences, and also to civilology and evaluation studies. The book addresses not only data analysis and statistics, but also how to formulate adequate research problems, to use (and test) different types of theories (explanatory and intervention theories) and to apply new forms of literature research to the field of law such as the systematic, rapid and realist reviews and synthesis studies. The choice and architecture of research designs, the collection of data, including Big Data, and how to analyze and visualize data are also covered. The book discusses the tensions between the normative character of law and legal issues and the descriptive and causal character of empirical legal research, and suggests ways to help handle

this seeming disconnect. This comprehensive guide is vital reading for law practitioners as well as for students and researchers dealing with regulation, legislation and other legal arrangements.

PDA Many workers are now telecommuters who perform their jobs at home, and others often use their personal digital assistants (PDAs) to conduct business while on the go.

Information literacy, on the other hand, is under-standing the role of information in generating and using business intelligence.

HARDWARE The hardware components include input, output, and memory devices and vary depending on the application and the organization.

PROCESSES Processes are usually methods for performing a task in an MIS application.

DATA The data component of an information system is considered the input to the system.

FUTURE DATA In addition, future data is predicted for budgets or cash flow reports.

AGGREGATED Aggregated data can be useful for reporting over- all performance during a particular sales quarter, for example, but it limits the ability of decision makers to focus on specific factors.

GOALS If an organization has defined its strategic goals, objectives, and critical success factors, then structuring the data component to define what type of data is collected and in what form is usually easy.

RELEVANT DATA A database, the heart of an information system, is a collection of all relevant data organized in a series of integrated files.

DATABASE A comprehensive database is essential for the success of any information system.

REDUCING TIME Databases are also important for reducing personnel time needed to gather, process, and interpret data manually.

DECISION MAKING The purpose of an information system's process component is generating the most useful type of information for making decisions.

The quality of information is determined by its usefulness to users, and its usefulness determines the success of an information system.

INSIGHTS If information lacks any of these qualities, the results are incorrect decisions, misallocation of resources, and overlooked windows of opportunity.

HRIS A personnel information system (PIS) or human resource information system (HRIS) is designed to provide information that helps decision makers in personnel carry out their tasks more effectively.

DECISIONS • Choosing the best job candidate • Scheduling and assigning employees • Predicting future personnel needs • Providing statistics on employee demographics • Allocating human and financial resources

The goal of a financial information system (FIS) is to provide information to financial executives in a timely manner.

STRATEGIES Information systems can help organizations reduce the cost of products and services and, if designed correctly, they can assist with differentiation and focus strategies.

EXECUTIVES The top information systems job belongs to either the chief technology officer (CTO) or the chief information officer (CIO).

IMPLEMENTATION This person is responsible for the design and implementation of information systems.

NETWORK This person oversees a company's internal and external network systems, designing and implementing network systems that deliver correct information to the right decision maker in a timely manner.

ADMINISTRATOR A database administrator (DBA) is responsible for data-base design and implementation, Additionally, a database administrator should have knowledge and understanding of data warehouses and data-mining tools.

PROGRAMMER A computer programmer writes computer programs or software segments that allow the information system to perform a specific task.

Annalists and Historians

This book, originally published in 1977, is a survey of European historiography from its origins in the historians of Greece and Rome, through the annalists and chroniclers of the middle ages, to the historians of the late eighteenth century. The author concentrates on those writers whose works fit into a specific category of writing, or who have influence the course of later historical writing, though he does deal with some of the more specialist forms of medieval historiography such as the crusading writers, and chivalrous historians like Froissart. He maintains that 'modern' history did not develop until the 18th Century.

History

In a provocative analysis of European and American historical thinking and practice since the early 18th century, A History of History confronts several basic assumptions about the nature of history. Among these are the concept of historical realism, the belief in representationalism and the idea that the past possesses its own narrative. Written by one of the leading thinkers on the subject, this book provides an accessible and radical history of history while offering new insights into the pressing questions of the nature, purpose and function of history. This book is an essential text for all students, teachers and consumers of history.

The Greater Roman Historians

La 4ème de couv. indique : "Postmodernist thinkers consider history to be not very far removed from a work of fiction, something dependent on historians' own interpretations of the past. Evans, however, argues that we can trust history and it is possible to be objective about what happened and what caused it to happen because historians are constrained and enabled by the surviving evidence. Evans shows how an understanding of social issues and rigorous scientific research give history shape, and why history is not simply what we make of it. He argues that this postmodernist view is contradictory and can lead to dangerous problems if we accept all historical interpretations as equally valid."

Roman Historiography

In this radical reassessment, Alun Munslow challenges conventional notions of history and offers a new vision of historical thinking and practice. Deploying a range of concepts such as scepticism, aesthetics, ethics, standpoint, irony, authorship and a new understanding of truth, *The Future of History* examines history as a form of knowledge in itself, arguing that in the future the multiple forms of its expression will be as significant as its content. This thought-provoking, challenging and unique book offers a way forward for history after postmodernism and is essential reading for anyone asking the question 'what is history?'.

An Introduction to Quantitative Methods for Historians

Literally thousands of annals, chronicles, and histories were produced in Italy during the Middle Ages, ranging from fragments to polished humanist treatises. This book is composed of a set of case studies exploring the kinds of historical writing most characteristic of the period. We might expect a typical medieval chronicler to be a monk or cleric, but the chroniclers of communal and Renaissance Italy were overwhelmingly secular. Many were jurists or notaries whose professions granted them access to political institutions and public debate. The mix of the anecdotal and the cosmic, of portents and politics, makes these writers engaging to read. While chroniclers may have had different reasons to write and often very different points of view, they shared the belief that knowing the past might explain the present. Moreover, their audiences usually shared the worldview and civic identity of the historians, so these texts are glimpses into deeper cultural and intellectual contexts. Seen more broadly, chronicles are far more entertaining and informative than narratives. They become part of the very history they are describing.

An Analysis of Richard J. Evans's In Defence of History

In this book, originally published in 1962, one of America's most distinguished historians defines the scope and variety of his field and outlines his views on history's objectives both as a science and as an art. The book provides insight into historians' methods of interpreting and presenting the past from Thucydides to twentieth century scholarship on Europe and America. It sets apart the different approaches to history – biographical, cultural, intellectual, geographical and political – illuminating the peculiar goals, problems and development of each discipline. It discusses the question of pre-history and its companion science, archaeology and spans the history of the collection and use of records.

The Future of History

Responding to the rapidly increasing use of interdisciplinary approaches to evaluate historical events and ideas, this volume addresses itself to both historical methodology and modern historiography. It presents nineteen different methodological concepts and provides discussion and examples for each of them. When Beringer uses the term "methodology"

Chronicling History

Green offers a remarkably lucid, erudite, and insightful description and analysis of the theoretical foundations of modern historical writing. He is the first to provide an orderly introduction to the several systematic models by which leading modern historians have attempted to explain continuity and change. This cogent survey is essential to an understanding of modern Western historiography. The book introduces history as a theoretical discipline. Green examines the many pitfalls of historical writing

and demonstrates that historical truth is a most elusive quarry. He addresses periodization, the manner in which past time is divided, showing how prevailing modes of periodization have evolved in the West. Part two of the book is concerned with the dynamics of change in European history. Each chapter considers a specific theoretical orientation, including: the commercial model initiated by Adam Smith and pursued by Henri Pirenne and others, the demographic model first formulated by Malthus, the Marxian model (or models), and the approaches of Weber and Sombart who identified religious forces as the chief engines of historical change. Part three addresses models of change being employed in world history, particularly the world-system approach of Frank and Wallerstein and the creative orientations of environmental historians. In his conclusion, Green returns to the question of whether the theoretical models of change currently in use among historians are consistent with contemporary modes of periodization. The bibliography is extensive.

The Greater Roman Historians

This ambitious volume provides a comparative perspective on the challenges facing the discipline of history as Eurocentrism fades as a lens for viewing the world. Exploring the state of history and the struggle over its ownership throughout the world, the authors address the issues of globalization, postmodernism, and postcolonialism that have been largely ignored by practicing historians despite their importance to cultural studies and their relevance to history. Engaging in a vigorous critique of Eurocentrism, the volume at the same time reaffirms the importance of historical ways of knowing.

The Gateway to History

Our impression of late twelfth and early thirteenth century England derives mainly from the work of contemporary historians, such as Roger of Howden, Gerald of Wales, and Gervase of Canterbury. This volume shows how these writers produced their original, engaging histories, exploring the insights they provide into medieval attitudes and mentalities.

Historical Analysis

Historical Writing and Historical Evidence in Republican Rome: *Omnium Annalium Monumenta* is a major collection of essays by distinguished authors on the development of Roman historiography.

History, Historians, and the Dynamics of Change

The process of converting the 'past' into 'history' involves engagement with a multitude of different sources and methods, and sports historians inevitably participate in the same debates over approaches and methodologies as their counterparts in other historical disciplines. At its heart, history remains a genre of empirical knowledge that is based upon the remains of the past, and without suitable evidence, there can be no sports history. A burgeoning range of sources has stimulated new ways of thinking and a significant expansion in the sports historian's evidentiary base, as textual sources have been supplemented by photos, films and cartoons, uniforms, architecture, maps and landscapes, and material culture more generally. This book deals with some of these innovations. It is divided into two sections, the first offering chapter-length studies of particular methodologies, and the second, brief responses from experts in their fields to the question 'what can sports historians learn from other disciplines?'

The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. Narrative Logic: A Semantic Analysis of the Historian's Language

It will be immediately apparent to anyone familiar with the full-length or even so-called concise world history surveys currently on the market that this book stands alone: its interesting and recurrent themes—conceptual bridges that span the many centuries—give it a unique voice. Its format helps the reader see the larger picture, to conceptualize patterns over time by importing concepts from one unit to another. And while this book might not offer flashy four-color maps and illustrations, its price and length speak for themselves. Too often students are required to pay a great deal of money for books they have no hope of finishing, let alone comprehending or remembering much longer than a day after turning in the last exam. With decades of combined experience teaching World History—in community colleges and four-year institutions—our team of authors has witnessed firsthand the frustration instructors and students of world history experience with current survey textbooks. Deeming a new approach necessary, they have spent the last several years conceiving of and writing *World History: A Concise Thematic Analysis*. Whether you are new to the field of world history or have taught the subject for years, we think you will find this new approach both refreshing and effective, and that you will agree that a thematic analysis goes a long way toward making a complicated compendium of human numbers, economies, and cultures—the “one darn thing after another” phenomenon that gives World history a bad name—meaningful to student readers.

Omnium Annalium Monumenta: Historical Writing and Historical Evidence in Republican Rome

This work focuses on some of the more unfamiliar aspects of the Roman experience, where the historian needs not just knowledge but also imagination. It explores how the Romans made sense of their past and how people today can understand that history, despite the inadequate evidence for early Rome and the Republic. All Latin and Greek source material is translated. The first essay in this collection was the Ronald Syme Lecture for 1993; “The Origins of Roman Historiography” argues that dramatic performances at the public games were the medium through which the Romans in the “pre-literary” period made sense of their own past.

Methodology in Sports History

Frederick Jackson Turner's 1893 essay on the history of the United States remains one of the most famous and influential works in the American canon. That is a testament to Turner's powers of creative synthesis; in a few short pages, he succeeded in redefining the way in which whole generations of Americans understood the manner in which their country was shaped, and their own character moulded, by the frontier experience. It is largely thanks to Turner's influence that the idea of America as the home of a sturdily independent people – one prepared, ultimately, to obtain justice for themselves if they could not find it elsewhere – was born. The impact of these ideas can still be felt today: in many Americans' suspicion of “big government,” in their attachment to guns – even in Star Trek's vision of space as “the final frontier.” Turner's thesis may now be criticised as limited (in its exclusion of women) and over-stated (in its focus on the western frontier). That it redefined an issue in a highly impactful way – and that it did so exceptionally eloquently – cannot be doubted.

Narrative Logic

This collection examines the classical liberal perspective within the professional study of history. The contributors investigate the origins and development of the classical liberal approach, argue for its revival within academia, and analyze its relevance to such topics as economics, civil liberties, feminism, and civil rights.

The Dimensions of Quantitative Research in History

This book examines the evolving representations of the colonial past from the mid-19th century up to decolonization in the 1960s and 70s – the so-called era of Modern Imperialism – in post-war history textbooks from across the world. The aim of the book is to examine the evolving outlook of colonial representations in history education and the underpinning explanations for the specific outlook in different – former colonizer and colonized – countries (to be found in collective memory, popular historical culture, social representations, identity-building processes, and the state of historical

knowledge within academia). The approach of the book is novel and innovative in different ways. First of all, given the complexity of the research, an original interdisciplinary approach has been implemented, which brings together historians, history educators and social psychologists to examine representations of colonialism in history education in different countries around the world while drawing on different theoretical frameworks. Secondly, given the interest in the interplay between collective memory, popular historical culture, social representations, and the state of historical knowledge within academia, a diachronic approach is implemented, examining the evolving representations of the colonial past, and connecting them to developments within society at large and academia. This will allow for a deeper understanding of the processes under examination. Thirdly, studies from various corners of the world are included in the book. More specifically, the project includes research from three categories of countries: former colonizer countries – including England, Spain, Italy, France, Portugal and Belgium –, countries having been both colonized and colonizer – Chile – and former colonized countries, including Zimbabwe, Malta and Mozambique. This selection allows pairing up the countries under review as former colonizing-colonized ones (for instance Portugal-Mozambique, United Kingdom-Malta), allowing for an in-depth comparison between the countries involved. Before reaching the research core, three introductory chapters outline three general issues. The book starts with addressing the different approaches and epistemological underpinnings history and social psychology as academic disciplines hold. In a second chapter, evolutions within international academic colonial historiography are analyzed, with a special focus on the recent development of New Imperial History. A third chapter analyses history textbooks as cultural tools and political means of transmitting historical knowledge and representations across generations. The next ten chapters form the core of the book, in which evolving representations of colonial history (from mid-19th century until decolonization in the 1960s and 1970s) are examined, explained and reflected upon, for the above mentioned countries. This is done through a history textbook analysis in a diachronic perspective. For some countries the analysis dates back to textbooks published after the Second World War; for other countries the focus will be more limited in time. The research presented is done by historians and history educators, as well as by social psychologists. In a concluding chapter, an overall overview is presented, in which similarities and differences throughout the case studies are identified, interpreted and reflected upon.

The History of Ireland

The ten papers that make up this volume were originally presented at a conference on 'The Greek and Roman Historians', held at the University of Leeds in 1983. Some of the articles investigate in detail the assumptions, prejudices and methods, which were brought to their works by writers as separate in time as Herodotus and Ammianus, as opposed in outlook as Thucydides and Dionysius, or as different in practical approach as Xenophon, Plutarch and Tacitus. Other papers, more wide-ranging in scope, examine respectively the validity of the traditions about early Rome, the function of historical writing in Rome of the second and first centuries BC, and the contemporary and later source material for the Caesarian tyrannicides. In an Epilogue the editors discuss the main themes that emerge from the collection.

A Systematic Analysis of Universal History from the Creation to the Present Time

This collection of essays explores the key issue of the nature of the boundary between fact and fiction, an issue which has become prominent especially through the upsurge of interest in the ancient novel and recent work on the rhetorical character of ancient historiography. The collection covers early Greek poetry (E.L. Bowie), Greek and Roman historiography (John Moles and T.P. Wiseman), Plato (Christopher Gill) and the Greek and Roman novel (John Morgan and Andrew Laird), and especially considers how far 'lying' was distinguished from 'fiction' at different periods and in different genres.

Analysis of English History

The histories of Rome by Sallust, Livy, Tacitus and others shared the desire to demonstrate their practical applications and attempted to define the significance of the empire. Politics and military activity were the central subjects of these histories. Roman historians' claims to telling the truth probably meant they were denying bias rather than conforming to the modern tendency to be objective.

World History

This title is a definitive and comprehensive edition of the fragmentary texts of all the Roman historians whose works are lost. Historical writing was an important part of the literary culture of ancient Rome,

and its best-known exponents, including Sallust, Livy, Tacitus, and Suetonius, provide much of our knowledge of Roman history. However, these authors constitute only a small minority of the Romans who wrote historical works from around 200 BC to AD 250. In this period we know of more than 100 writers of history, biography, and memoirs whose works no longer survive for us to read. They include well-known figures such as Cato the Elder, Sulla, Cicero, and the emperors Augustus, Tiberius, Claudius, Hadrian, and Septimius Severus -- cover.

Historiography and Imagination

Exploring the relationship between psychology and history, this book considers how the disciplines could benefit from a closer dialogue.
