This ball has energy.

This is a ball.

All balls are made of atoms.

There are neutrons.

And protons.

And electrons.

An electron can be here.

But an electron cannot be here.

All electrons have energy.

This electron has the most energy.

There are no electrons with zero energy.

This energy is quantized.

An electron can take energy
to fall down.

This amount of energy is a quantum.

What can scanning children's brains tell us about dyslexia - What can scanning children's brains tell us about dyslexia by Aalto University 2,079 views 3 years ago 58 seconds - Read more here: <https://www.aalto.fi/en/news/difficulty-learning-nonsense-words-may-indicate-a-childs-high-risk-of-dyslexia>.

Can scanning the brains of children tell us why dyslexia happens, and teach us how to help children who have it?

Scans showed dyslexic children had a difference in the activity of the left-hand side of their brains, compared to non-dyslexic children

Brain scans were only one part of the study, the team also looked at how children performed at a language game

The researchers found that children with high confidence in their reading skills could overcome some of the challenges of dyslexia
