New Cutting Edge

Biomedical Science in Professional and Clinical Practice is essential reading for all trainee biomedical scientists looking for an introduction to the biomedical science profession whether they are undergraduates following an accredited biomedical sciences BSc, graduate trainees or experienced staff with overseas qualifications. This book guides trainees through the subjects, which they need to understand to meet the standards required by the Health Professions Council for state registration. These include professional topics, laws and guidelines governing clinical pathology, basic laboratory techniques and an overview of each pathology discipline. It helps trainees at any stage of training and in any pathology discipline(s) to think creatively about how to gather evidence of their understanding and professional competence. By referring to specialist sources of information in each area, it helps students to explore particular topics in more depth and to keep up to date with professional and legal changes. It is also of value to any Training Officers who are looking for ideas while planning a programme of training for a trainee biomedical scientist. The book includes basic principles of working in the pathology laboratory including laws and regulations, which must be observed, such as health and safety, data protection and equal opportunities laws and guidelines. Practical exercises are included throughout the book with examples of coursework, suggestions for further exercises and self-assessment. Summary boxes of key facts are clearly set out in each chapter and ideas for group/tutorial discussions are also provided to enhance student understanding.

New Cutting Edge

This fully revised third edition builds on the task based learning approach that has made 'Cutting Edge' so popular. With new DVD-ROM material and digital components, learners can be confident of improving their language skills through a carefully balanced range of activities.

Cutting Edge

The learning portfolio is a powerful complement to traditional measures of student achievement and a widely diverse method of recording intellectual growth. This second edition of this important book offers new samples of print and electronic learning portfolios. An academic understanding of and rationale for learning portfolios and practical information that can be customized. Offers a review of

the value of reflective practice in student learning and how learning portfolios support assessment and collaboration. Includes revised sample assignment sheets, guidelines, criteria, evaluation rubrics, and other material for developing print and electronic portfolios.

Cutting Edge. Starter

Ready-to-go activities for teacher trainers running pre- and in-service training courses. For busy teacher trainers who practise what they preach: trainees will benefit from learning about methodology in training sessions which are in themselves models of good teaching practice.

Cutting Edge. Upper-intermediate. Workbook. Per Le Scuole Superiori

From beginners through to advanced level, Cutting Edge's straightforward and reliable methodology delivers an all-round practical knowledge of grammar, skills, vocabulary and real-life functional language. New Editions of Elementary, Pre-intermediate, Intermediate and Upper Intermediate levels are now available.

Cutting Edge

Preparing to Teach

Assists academic staff to develop their effectiveness as teachers and improve their students' learning by giving practical guidelines and suggestions for teaching and a series of activities.

Preparing to Teach

This entirely new edition of a very successful book focuses on developing professional academic skills for supporting and supervising student learning and effective teaching. It is built on the premise that the roles of those who teach in higher education are complex and multi-faceted. A Handbook for Teaching and Learning in Higher Education is sensitive to the competing demands of teaching, research, scholarship, and academic management. The new edition reflects and responds to the rapidly changing context of higher education and to current understanding of how to best support student learning. Drawing together a large number of expert authors, it continues to feature extensive use of case studies that show how successful teachers have implemented these ideas. It includes key topics such as student engagement and motivation, internationalisation, employability, inclusive strategies for teaching, effective use of technology and issues relating to postgraduate students and student retention. Part 1 explores a number of aspects of the context of UK higher education that affect the education of students, looking at the drivers of institutional behaviours and how to achieve success as a university teacher. Part 2 examines learning, teaching and supervising in higher education and

includes chapters on working with diversity, encouraging independent learning and learning gain. Part 3 considers approaches to teaching and learning in different disciplines, covering a full range including arts and humanities, social sciences, experimental sciences through to medicine and dentistry. Written to support the excellence in teaching and learning design required to bring about student learning of the highest quality, this will be essential reading for all new lecturers, particularly anyone taking an accredited course in teaching and learning in higher education, as well as those experienced lecturers who wish to improve their teaching practice. Those working in adult learning and educational development will also find the book to be a particularly useful resource. In addition it will appeal to staff who support learning and teaching in various other roles.

Effective Teaching in Higher Education

This bestselling book is a unique introduction to the practice of university teaching and its underlying theory. This new edition has been fully revised and updated in view of the extensive changes which have taken place in higher education over the last decade and includes new material on the higher education context, evaluation and staff development. The first part of the book provides an outline of the experience of teaching and learning from the student's point of view, out of which grows a set of principles for effective teaching in higher education. Part two shows how these ideas can enhance educational standards, looking in particular at four key areas facing every teacher in higher education: * Organising the content of undergraduate courses * Selecting teaching methods * Assessing student learning * Evaluating the effectiveness of teaching. Case studies of exemplary teaching are used throughout to connect ideas to practice and to illustrate how to ensure better student learning. The final part of the book looks in more detail at appraisal, performance indicators, accountability and educational development and training. The book is essential reading for new and experienced lecturers, particularly those following formal programmes in university teaching, such as courses leading to ILT accreditation.

A Handbook for Teaching and Learning in Higher Education

The Global Business Handbook is based on the structure of the very successful IÄ0/00SEG International School of Management's programme on international management. Concentrating on the big developments that are currently happening internationally, the book considers how managers operating in the global business landscape must change what they do to create advantages and remain competitive.

Learning to Teach in Higher Education

Covering everything you need to know about teaching within the UK higher education system, this book is the ideal introduction for anyone looking to start their teaching career. A must-read guide for international staff new to teaching in UK higher education, this key text focuses on what is particular and often baffling to those who are new to higher education teaching in the UK. With practical tips and advice rooted in relevant theory, it is an invaluable resource to guide you through the initial teaching experience. Breaking down all of the aspects involved in teaching, learning and assessing in UK higher education, this book covers: The key features of UK higher education – particularly how it might differ from other systems How courses and the curriculum are designed How to support learning within your teaching practice Advice on marking and giving worthwhile feedback How to develop your own professional practice A full glossary of key terms An Introduction to Teaching in UK Higher Education is a one-stop resource for those looking to begin a career in UK higher education. Particularly useful for new international staff, it will also be of interest to those looking to improve their teaching practice.

The Global Business Handbook

This bestselling book is a unique introduction to the practice of university teaching and its underlying theory. This new edition has been fully revised and updated in view of the extensive changes which have taken place in higher education over the last decade and includes new material on the higher education context, evaluation and staff development. The first part of the book provides an outline of the experience of teaching and learning from the student's point of view, out of which grows a set of principles for effective teaching in higher education. The book is essential reading for new and experienced lecturers, particularly those following formal programmes in university teaching, such as courses leading to ILT accreditation.

An Introduction to Teaching in UK Higher Education

This book is a guide for designing professional development programs for graduate students. The teaching competencies framework presented here can serve as the intended curriculum for such programs. The book will also be an excellent resource for evaluating programs, and will be an excellent resource for academics who study graduate students. This book presents the work of the Graduate Teaching Competencies Consortium to identify, organize, and clarify the competencies that graduate students need to teach effectively when they join the professoriate. To achieve this goal, the Consortium developed a framework of 10 teaching competencies organized around three overarching questions: • What do graduate students need to achieve by the end of their graduate education to be successful teacher-scholars? • What do graduate students need to understand about higher education to have successful careers as educators? • What do graduate students need to do to be successful teachers during their graduate student careers? Although much work has been done to identify the competencies of effective teachers in higher education, only a small portion of this work has been conducted with graduate student instructors. This is an important area of research given that graduate students are critical in the higher education academic pipeline. Nationally, graduate students teach between 25% and 50% of courses offered at the undergraduate level. Graduate student teaching is also critical because during early teaching experiences teachers establish a teaching style and set of teaching skills, which will endure as graduate students enter the professoriate. It is important to develop a teaching competency framework that is specific to graduate student instructors as they often have unique needs and roles as teachers. For example, graduate student instructors are in the unique position of becoming experts in their field concurrent with learning to teach. Moreover, as many professional development programs for graduate student instructors evolve based upon factors such as available resources and perceived needs of graduate students, this framework will be a useful aid for thoughtfully designing strategic, evidence-based, comprehensive professional development opportunities and programs.

Learning to Teach in Higher Education

There is often little guidance available on how to teach in universities, despite there being increasing pressure to raise teaching standards, as well as no official requirement for academics to have any specific teaching qualification in many countries. This invaluable book comprehensively addresses this issue, providing an overview of teaching in a business school that covers all stages of student learning. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 10.0px Arial}

Preparing for College and University Teaching

This popular and accessible guide to the PTLLS Award is a comprehensive introduction to teaching in a variety of settings within the Lifelong Learning Sector from colleges to work-based learning, offender learning and adult and community contexts. This fourth edition is completely revised and updated and reflects current practice at levels 3 and 4. A new 2Extension Activity2 feature targets those taking the award at level 4 and further theories of learning are incorporated throughout. Chapters are based around the learning cycle, are focused on the PTLLS assessment criteria and are linked to the LLUK Standards. The New Award The fifth edition of Preparing to Teach in the Lifelong Learning Sector is also now available, written for the NEW four unit PTLLS Award. Find out more here: <http://www.uk.sagepub.com/books/Book238711?siteId=sage-uk&prodTypes=any&q=gravells&fs=1>

Learning and Teaching in Higher Education

First Published in 2002. Routledge is an imprint of Taylor & Francis, an informa company.

Preparing to Teach in the Lifelong Learning Sector

What are the aims of higher education? What are the strategies necessary for institutional improvement? How might the student experience be improved? The emergence of the discourse around

learning and teaching is one of the more remarkable phenomena of the last decade in higher education. Increasingly, universities are being required to pay greater attention to improving teaching and enhancing student learning. This book will help universities and colleges achieve these goals through an approach to institutional change that is well founded on both research and practical experience. By placing learning at the centre of organizational change, this book challenges many of the current assumptions about management of teaching, supporting students, the separation of research and teaching, the use of information technology and quality systems. It demonstrates how trust can be restored within higher education while advancing the need for change based on principles of equity and academic values for students and teachers alike. *Improving Teaching and Learning in Higher Education* is key reading for anyone interested in the development of teaching and learning in higher education, as well as policy makers.

Teaching and Learning

A complete, accessible, evidence-based guide to better teaching in higher education This higher education playbook provides a wealth of research-backed practices for nearly every aspect of effective teaching throughout higher education. It is filled with practical guidance and proven techniques designed to help you improve student learning, both face-to-face and online. Already a bestselling research-based toolbox written for college instructors of any experience level, *Teaching at Its Best* just got even better. What is new? A lot. For this updated 5th edition, Todd Zakrajsek joins Linda Nilson to create a powerful collaboration, drawing on nearly 90 combined years as internationally recognized faculty developers and faculty members. One of the most comprehensive books on effective teaching and learning, the 5th edition of *Teaching at its Best* brings new concepts, new research, and additional perspectives to teaching in higher education. In this book, you will find helpful advice on active learning, interactive lecturing, self-regulated learning, the science of learning, giving and receiving feedback, and so much more. Each chapter has been revised where necessary to reflect current higher education pedagogy and now includes two reflection questions and one application prompt to reflect on your teaching and stimulate peer discussions. Discover the value of course design and how to write effective learning outcomes Learn which educational technology is worthwhile and which is a waste of time Create a welcoming classroom environment that boosts motivation Explore detailed explanations of techniques, formats, activities, and exercises—both in person and online Enjoy reading about teaching strategies and educational concepts Whether used as a resource for new and seasoned faculty, a guide for teaching assistants, or a tool to facilitate faculty development, this research-based book is highly regarded across all institutional types.

A Handbook for Teaching and Learning in Higher Education

As a result of development within Higher Education teaching and learning, new lecturers are expected to have training and induction in teaching and learning strategies. This book provides an easy and accessible approach to the planning and preparation of teaching sessions, teaching in different settings and teaching across a diverse student population. *Developing Learning and Teaching in Higher Education* is supported by extensive research and provides practical examples of key issues. The book guides the new lecturer through the process of reflection and self-improvement, as well as demonstrating the benefits of producing a portfolio of development. This text also details how to achieve associate membership of the ILTHE and provides evidence for promotion.

EBOOK: Improving Teaching and Learning in Higher Education: A Whole Institution Approach

Research into how teaching affects the quality of student learning at university is a rapidly changing field. University teachers are increasingly required to develop their own strategies for effective teaching, often with limited guidance from their institutions. *Teaching for Understanding at University* not only outlines a wide range of recent developments in the area, but shows how approaches can be brought together to help university teachers think more imaginatively about ways of encouraging students' learning. Written in a way designed to be interesting and accessible to university teachers across disciplines, the volume concentrates on how students reach a personal understanding of the subject they are studying. Covering academic understanding, approaches to teaching, assessment methods and evaluation of teaching, the book provides a comprehensive introduction to the latest ideas on teaching and learning. Avoiding unnecessary jargon and 'business speak', this is the ideal book for the newly qualified lecturer, as well as the more experienced academic who is keen to consider their teaching methods from a fresh perspective. Noel Entwistle is Professor Emeritus of Education at the

University of Edinburgh. He was previously the editor of the British Journal of Educational Psychology and Higher Education, and has an international reputation for his work in the field of student learning in higher education.

Teaching at Its Best

Being A Teacher in Higher Education draws extensively on research literatures to give detailed advice about the core business of teaching: instruction, learning activities, assessment, planning and getting good evaluations. It offers hundreds of practical suggestions in a collegial rather than didactic style. This is not, however, another book of tips or heroic success stories. For one thing Peter Knight appreciates the different circumstances that new, part-time and established teachers are in. For another, he insists that teaching well (and enjoying it) is as much about how teachers feel about themselves as it is about how many slick teaching techniques they can string together. He argues that it is important to develop a sense of oneself as a good teacher (particularly in increasingly difficult working conditions); and it is for this reason that the final part of this work is about career management and handling change. This is a book about doing teaching and being a teacher: about reducing the likelihood of burn-out and improving the chances of getting the psychic rewards that make teaching fulfilling. It is an optimistic book for teachers in universities, many of whom feel that opportunities for professional fulfilment are becoming frozen.

Developing Teaching and Learning in Higher Education

Now that you've made the decision to teach and you've chosen the route (for example PGCE, School Direct, Teach First, Troops to Teachers, School-based training), what are the nuts and bolts of teaching? What do you, as a trainee teacher or new classroom practitioner, really need to know? What are the day-to-day essentials that will help you rise to the challenge of your teaching role and become an outstanding teacher? Whatever your training route to becoming a fully qualified teacher this is a practical guide to teaching that will help you 'hit the ground running' in your role! It offers a comprehensive overview of teaching with a focus on the essential aspects of learning how to teach. This includes learning from colleagues through observation, planning and delivering lessons, classroom presence and control along with specific advice on asking questions, assessment and the use of technology in the classroom. In short, the all-important fundamentals of 'what to do in the classroom'. Packed with helpful information and ideas this book will help you approach the practical business of teaching with confidence. Exciting, accessible and conversational it is designed to give you an overview of pedagogy and how it can be put into practice, as well as a greater understanding of how teaching in schools is planned, developed and delivered. With its rich range of ideas and useful features this is the ideal textbook for trainee teachers on any teacher-training route, ending with practical help and advice on applications and interviews so that you can make that all important transition from trainee to employee! "Glazzard, Denby and Price provide beginning teachers with a truly engaging introduction to thinking and learning about the art of teaching. Its authentic voice draws upon practical examples, theory and humour (an essential attribute for all teachers!) in order to explore key topics including working effectively with colleagues and managing a teacher workload. Each chapter offers a problem activity to stimulate beginning teachers, and indeed their school-based mentors, to engage in reflection and professional dialogue around issues important for successful learning." Dr Angela Gault, Head of Education Partnerships, University of Wolverhampton, UK

Teaching for Understanding at University

This book provides teachers in higher education with what they need - a compelling framework for improving student learning. It combines a comprehensive synthesis of the latest research on learning and teaching with practical strategies for implementing it in their classrooms2 - Professor Ken Bain, Author of What the Best College Teachers Do, Vice Provost for Instruction, Montclair State University Praise for the First Edition: `For too long we have waited for a book that brings together the best contemporary thinking about learning and teaching and that connects with academics2 everyday teaching practice in an engaging way. At last, in this book, we have it2 - Ronald Barnett, Institute of Education, University of London Worldwide, higher and professional education services are challenged by increased student numbers and diversity, tougher demands for professional accountability, increasing calls for educational relevance and thinning resources. This new edition addresses key issues in the practice and theory of teaching and learning in the sector and includes fully updated discussions of: - the professional in academic practice - mentoring - teaching with technology - the relationship between learning

objectives, outcomes and assessment - the novice teacher The authors draw on theory, practice and current research to provide a new way of thinking about the many aspects of learning and teaching in higher education, enabling readers to reflect critically on their teaching. They also propose a model for continuous professional development appropriate to the higher education academic community. Learning & Teaching in Higher Education: The Reflective Professional is for lecturers, researchers, staff developers and others involved in teaching in higher and professional education. Greg Light is Director of the Searle Center for Teaching Excellence and an associate professor in the School of Education and Social Policy at Northwestern University, Chicago. Roy Cox was a visiting academic at the University of London where he helped establish one of the first centres for learning and teaching in higher education in the world. Susanna Calkins is Associate Director for Faculty development at the Searle Center for Teaching Excellence.

Being A Teacher In Higher Education

This book identifies strategies that are consistently associated with good teaching and presents them within a theoretical framework that explains how they promote students' active and meaningful learning. The book promotes teachers' pedagogical knowledge and their perception of teaching as scholarly, intellectual work, and provides extensive practical advice.

Learning to Teach

What is effective teaching and what pedagogical models are being used in teacher education and evaluation? The purpose of this book is for current educators to share their effective practices in higher education--the program demographics, the vision, the preparation, the process, and the outcome. This book is a peer-reviewed, edited volume of essays written by current university professors that critically examines the phenomenon of best practices in teacher education, evaluation and education more broadly.

Learning and Teaching in Higher Education

This book is aimed at people taking on the challenge of managing a teaching module or course for the first time, and should also be a valuable resource to colleagues with some experience who wish to review and formalise their development in this area. Some colleagues will come to teaching management enthusiastically as something that interests them personally and professionally, others may find themselves persuaded or volunteered, but in either case this book should act as a guide and a framework for navigating what is often something of a neglected subject. Unfortunately the 'first-time' module organiser or course director has little to turn to beyond what their institution provides in the way of tailored resources, yet this book aims to remedy this, as a practical guide that realistically reflects the context of teaching in higher education, linked to sound learning principles, and grounded in some well-established models of good management. The emphasis throughout is on simple but useful messages, tools that can readily be applied or adapted, and on bringing these to life with meaningful examples and illustrations. With example from different levels of study, modes of study, subject disciplines and different ideas and values the book considers the difference between courses structured around classroom teaching and assessment by traditional examinations, and a distance-based programme of study assessed through project work and tutor-marked assignments. By focussing on the core elements of teaching management such as planning, delivery, and building the programme team, and illustrating each of these with examples reflecting a wide range of situations this introductory guide is the perfect route map for a career in teaching in higher education

Teaching for Effective Learning in Higher Education

Introduction to Education provides pre-service teachers with an overview of the context, craft and practice of teaching in Australian schools as they commence the journey from learner to classroom teacher. Each chapter poses questions about the nature of teaching students, and guides readers through the Australian Professional Standards for Teachers. Incorporating recent research and theoretical literature, Introduction to Education presents a critical consideration of the professional, policy and curriculum contexts of teaching in Australia. The book covers theoretical topics in chapters addressing assessment, planning, safe learning environments, and working with colleagues, families, carers and communities. More practical chapters discuss professional experience and building a career after graduation. Rigorous in conception and practical in scope, Introduction to Education welcomes new educators to the theory and practical elements of teaching, learning, and professional practice.

Effective Teaching

Based on rapid advances in what is known about how people learn and how to teach effectively, this important book examines the core concepts and central pedagogies that should be at the heart of any teacher education program. Stemming from the results of a commission sponsored by the National Academy of Education, Preparing Teachers for a Changing World recommends the creation of an informed teacher education curriculum with the common elements that represent state-of-the-art standards for the profession. Written for teacher educators in both traditional and alternative programs, university and school system leaders, teachers, staff development professionals, researchers, and educational policymakers, the book addresses the key foundational knowledge for teaching and discusses how to implement that knowledge within the classroom. Preparing Teachers for a Changing World recommends that, in addition to strong subject matter knowledge, all new teachers have a basic understanding of how people learn and develop, as well as how children acquire and use language, which is the currency of education. In addition, the book suggests that teaching professionals must be able to apply that knowledge in developing curriculum that attends to students' needs, the demands of the content, and the social purposes of education: in teaching specific subject matter to diverse students, in managing the classroom, assessing student performance, and using technology in the classroom.

Leading Learning and Teaching in Higher Education

Using empirical research this text gives faculty and graduate teaching assistants the tools for understanding why certain teaching practices work and how to adjust their teaching to changing classroom room and online environments.

Introduction to Education

The essential guide to teaching and learning in higher education for early career academics, post-graduate researchers, graduate teaching assistants and professional services staff. This accessible text offers practical guidance for anyone new to teaching in higher education. It covers key aspects of teaching and learning relevant for early career academics, postgraduate researchers, graduate teaching assistants and professional services staff, including those working towards Advance HE/Higher Education Academy (HEA) recognition. Understand how to plan and evaluate teaching sessions, the dynamics of teaching in small and large groups, how to use technology effectively, the particular challenges of laboratory and fieldwork and the importance of inclusive practice and career development. Key features include:

- Practical strategies to enhance student learning and motivation.
- Case studies from higher education professionals in various roles
- Activities and reflection points applying educational principles to your own teaching
- Chapter links to the UK Professional Standards Framework (UKPSF)

Preparing Teachers for a Changing World

A bestselling book for higher education teachers and administrators interested in assuring effective teaching.

Effective College and University Teaching

This monograph is an attempt to bring together the best recent work in the field to assist teacher educators in developing successful service-learning in their programs and to promote policies and procedures that will foster successful service-learning activities at the local, state, and national levels. Part 1: "Theory, Research, and Foundational Issues" includes chapters entitled "Service-Learning: An Essential Process for Preparing Teachers as Transformational Leaders in the Reform of Public Education" (Carol Myers and Terry Pickeral); "School-Based Service: A Review of Research for Teacher Educators" (Susan C. Root); "Service-Learning and Evaluation: An Inseparable Process" (Robert Shumer); "Service-Learning Professional Development for Experienced Teachers" (Don Hill and Denise Clark Pope); and "Teacher Education and Service-Learning: A Critical Perspective" (Robert Shumer). Part 2: "Diverse Perspectives of Service-Learning and Teacher Education" includes chapters entitled: "Introduction to Part 2" (Joseph A. Erickson); "Working with Preservice Teachers to Improve Service-Learning: A Master Teacher's Perspective" (Christine Hunstiger Keithahn); "A Recent Teacher Education Graduate's View of Service-Learning" (Theresa J. H. Magelssen); "A K-12 Administrator's Perspective" (Mary J. Syfax Noble); "A Service Recipient's Perspective" (Janet Salo, with Susan O'Connor); "Collaborating with the Community: A Campus-Based Teacher Educator's Story" (Rahima C. Wade) and "Turtle Island Project: Service-Learning in Native Communities" (John Guffey). Part 3: "Models for the Integration of Service-Learning and Teacher Education" includes chapters entitled: "Introduction to Part 3" (Jeffrey B. Anderson); "James Madison University" (Diane Fuqua); "Kentucky State University" (Carole A. Cobb); "Clark Atlanta University" (William H. Denton); "Valparaiso University" (Jose Arredondo); "Alverno College" (Julie A. Stoffels); "Gustavus Adolphus College" (Carolyn O'Grady); "Washington State University" (Gerald H. Maring); "California State University-San Marcos" (Joseph F. Keating); "Mankato State University" (Darrol Bussler); "Clemson University" (Carol Weatherford, Marty Duckenfield, and Janet Wright); "Augsburg College" (Vicki L. Olson and Susan O'Connor); "University of Iowa" (Rahima Wade); Ryan); "Seattle University" (Jeffrey B. Anderson); "Providence College" (Jane Callahan and Lynne Ryan). (Contains seven figures, an annotated bibliography, and an appendix, which includes a list of service-learning resources and contributors.) (LH)

Introduction to University Teaching

Forging closer links between university research and teaching has become an important way to enhance the quality of higher education across the world. As student engagement takes centre stage in academic life, how can academics and university leaders engage with their students to connect research and teaching more effectively? In this highly accessible book, the contributors show how students and academics can work in partnership to shape research-based education. Featuring student perspectives, it offers academics and university leaders practical suggestions and inspiring ideas on higher education pedagogy, including principles of working with students as partners in higher education, connecting students with real-world outputs, transcending disciplinary boundaries in student research activities, connecting students with the workplace, and innovative assessment and teaching practices. Written and edited in full collaboration with students and leading educator-researchers from a wide spectrum of academic disciplines, this book poses fundamental questions about learning and learning communities in contemporary higher education.

Teaching For Quality Learning At University

How To Be An Effective Teacher in Higher Education is a highly practical resource for lecturers with a particular focus on working with large groups of students, especially in a lecture environment. Alan Mortiboys is an experienced teacher and lecturer who runs courses and workshops for higher education institutions. The book draws upon his many years of experience and is a distillation of the common concerns and issues raised by workshop participants. How To Be An Effective Teacher in HE is designed to complement and support the National Professional Standards Framework for Teaching and Supporting Learning in Higher Education and maps directly on to the six areas of activity outlined in the Framework.

Learning with the Community

The community of translator trainers is growing constantly, as new courses are set up in diverse contexts throughout the world. After a brief overview of current approaches to translator training, this book offers practical guidance to sound training practices in different contexts. Given the very wide variety of backgrounds translator trainers come from, the text aims to be equally of use to language teachers new to translation, to professional translators new to teaching or training, to recent graduates

in translation intending to embark on academic careers in translation studies, and to more experienced trainers wishing to reflect on their activity or to train new trainers. For that reason, no specific prior knowledge or experience of training is taken for granted. A systematic approach to curriculum and syllabus design is adopted, guiding readers from the writing of learning outcomes or objectives through to the design of teaching and learning activities, to the assessment of learning and course evaluation, all this applied throughout in detail to the field of translation. Chapters contain exercises and activities designed to promote reflection on practice and to help trainers to develop their teaching skills, as well as their own course material. These activities are suitable both for self-learners and for groups on trainer training and staff development courses.

Shaping Higher Education with Students

This book is a comprehensive yet accessible introduction to learning and teaching in higher education, and an invaluable resource if you are seeking to enhance and develop your teaching in the context of the Teaching Excellence Framework (TEF). It also supports your progress towards Fellowship of the Higher Education Academy (HEA), with an overview of the UK Professional Standards Framework (UKPSF) and linking content to the framework. This book is for new and existing teachers in higher education and those teaching higher education programmes in further education colleges. As well as helping you enhance and extend your understanding of the theory and practice of learning and teaching, this book encourages you to reflect on and improve your teaching in higher education to meet the needs of a diversity of students in the changing landscape of higher education. Together with its progressive and logical sequencing of topics - covering planning and preparation; techniques, methods and resources; assessment, quality and evaluation - the book provides:

- A core text and resource for new teachers in higher education undertaking postgraduate programmes in learning and teaching.
- An accessible and practical introduction to the knowledge and skills required to become a confident and effective lecturer in higher education
- Mapping to the HEA UK Professional Standards Framework to provide guidance and support for those working towards Fellowship of the HEA together with sample Fellowship applications
- 'Pause & Reflect' boxes to reinforce your professional learning journey

"This book is not only an excellent introduction to learning and teaching in university but also for those providing higher level learning in further education colleges." Vicky Duckworth, Reader in Education, Edge Hill University, UK

"This wide-ranging almost encyclopedic book touches on all the topics and issues that someone new to higher education is required to address. Scales provides a guide for the new higher education teacher through the confusing and confused world of higher education in order that they can remain a teacher despite institutional distractions." Dennis Hayes, Professor of Education, University of Derby, UK

"This book provides a welcome and timely addition which will be of huge value to anybody with an interest in teaching and learning in higher education. It will be of particular value to those new to teaching in the higher education sector as well as more experienced staff who wish to update their skills or apply for Higher Education Academy recognition." Chris Wakeman, Head of Education and Inclusion Studies, University of Wolverhampton, UK

"Peter Scales shares my dislike for the word 'delivery' to describe teaching and clearly explains why! The text is passionate, readable and engaging with a logical presentation of the lived experiences of teaching in higher education." Beverley Hale, Professor of Learning and Teaching, University of Chichester, UK

How To Be An Effective Teacher In Higher Education

Addresses a subject of common interest in developed countries - the apparently diminishing role of universities in the education of teachers. There is pressure to redesign teacher education, an on-going struggle between those who see the need to strengthen the knowledge base of teachers and those who favour learning on the job; there is a perceived need to define precisely what teachers need to know and be able to do and at the same time there is relaxation of entry standards for students entering the profession in an attempt to relieve the chronic shortage of teachers. This situation is prevalent in the USA, in the UK, Europe and Australia. The struggle over who should control the preparation of teachers is the significant emerging issue in education, and could change the whole structure of the teacher preparation.

A Handbook for Translator Trainers

Aiming to bridge the gap between the theory and practice of effective teaching, this book provides an overview of major issues and their implications for the teacher. It is intended for student and experienced teachers, and anyone concerned with teacher education and staff development.

An Introduction to Learning and Teaching in Higher Education

A must read for nursing students, this book deals with essentials of nursing education, communication and educational technology. Considering the transnational acceptance of our profession, each chapter is written with an international perspective. It is earnestly hoped that the simple yet authentic explanations followed throughout this book with the help of suitable examples will make the subject of nursing education more palatable and interesting to the nursing community. Salient Features, First of its Kind, Meeting international standards, Simple yet authentic explanations, Enriched with suitable examples, Prepared as your lifelong companion, Well accepted by the nursing community. Book jacket.

The Role of the University in the Preparation of Teachers

Review of the first edition: "An excellent introduction to all of the core professional issues that trainee teachers need to address during their training... a first port of call for all student teachers keen to understand the challenges involved in becoming a professional teacher in today's schools." Professor John Furlong, Director, Department of Educational Studies, Oxford University, UK. The new edition of this bestseller is the definitive guide for all trainee secondary school and newly qualified teachers. Using practical examples, it covers the range of core professional skills and concepts that all student teachers need to acquire, irrespective of their subject specialism or training route. Updated and revised throughout to take into account recent developments in teaching, the second edition covers topics such as Every Child Matters, Special Educational Needs, and ICT in the classroom, making it suitable for use by newly qualified teachers to support their early professional development. Informative, accessible and engaging, the book offers students: Use of examples and illustrations to make abstract or unfamiliar ideas concrete and meaningful An interactive approach whereby readers are invited to engage with the text and respond to it through a set of objectives, to be achieved by the end of the chapter Thought-provoking research to alert readers to fresh thinking and initiatives, which are at the cutting-edge of developments in the field Self-contained tasks to enable readers to complete them there and then

Effective Teaching in Schools

Every teacher seeks to be an effective teacher. Every teacher wants to have a positive, remarkable, and lasting influence on students' lives. But what makes for an effective teacher? What role does teacher preparation play in teacher effectiveness? What do effective teachers do during planning, instruction, and assessment? How do they create a learning environment that engages and supports students? And how do effective teachers interact with their students to promote the best opportunities and results for all? In *Qualities of Effective Teachers*, 3rd edition, James H. Stronge explores these questions and more as he synthesizes the literature on teacher effectiveness. The result? A research-based framework for effective teaching that addresses: Professional knowledge Instructional planning Instructional delivery Assessment Learning environment Professionalism Stronge also examines characteristics of effective teachers of at-risk students and high-ability students. To bridge the gap between research and practice, he includes checklists of skills and positive qualities associated with effective teacher performance as well as red flags that indicate that teachers may not be reaching their full potential in the classroom. This resource is for any educator interested in improving teaching. It offers research-based advice for teachers who wish to improve their own performance, as well guidance for teacher leaders and supervisors, school administrators and department heads, staff development specialists, teacher and administrator educators, human resource specialists, and education policymakers and their staffs. Anyone who has a vested interest in students and their success can gain valuable insight and practical tools to ensure positive outcomes for all students. New to the 3rd edition: Introduction of the Framework for Effective Teaching and its six domains—professional knowledge; instructional planning; instructional delivery; assessment; learning environment; professionalism Chapter vignettes updated to illustrate the domains of the Framework for Effective Teaching Updated reference charts at the end of chapters, keyed to the subdomains of the Framework for Effective Teaching and expanded to include references for 21 century teachers Twenty-nine sidebars interspersed throughout chapters that provide state-of-the-art supplementary text on effective teaching practices and research findings Updated Teacher Skills Assessment Checklist, keyed to the domains of the Framework for Effective Teaching Updated Part 2 presents positive qualities and red flags associated with effective teachers, keyed to the domains of the Framework for Effective Teaching More than 1,000 entries in the References

Learning and Teaching Nursing

This book is a practical guide designed for teachers and trainee teachers to help them improve their teaching skills. It presents a concise and readable introduction to the basic techniques and procedures required in the classroom together with practical exercises designed to develop skills.

Preparing to Teach in Secondary Schools

This text aims to provide university lecturers with practical guidelines for the effective teaching and assessment of students. The topics discussed include course planning and preparation, delivery and presentation, classroom management, student feedback and much more.

Qualities of Effective Teachers

Effective Teaching

Using the Structured Techniques

In their Second Edition of *Cases in Intelligence Analysis: Structured Analytic Techniques in Action*, accomplished instructors and intelligence practitioners Sarah Miller Beebe and Randolph H. Pherson offer robust, class-tested cases studies of events in foreign intelligence, counterintelligence, terrorism, homeland security, law enforcement, and decision-making support. Designed to give analysts-in-training an opportunity to apply structured analytic techniques and tackle real-life problems, each turnkey case delivers a captivating narrative, discussion questions, recommended readings, and a series of engaging analytic exercises.

Cases in Intelligence Analysis

More people than ever are using case studies in research, yet there is very little guidance on how to construct case studies effectively. Drawing on his vast experience of teaching and mentoring researchers, Bill Gillham here provides a comprehensive guide to this popular method of research. Using real-life examples throughout, *Case Study Research Methods* guides the reader through all the stages of a case study, from initial design to the processing and writing up of findings. Especially detailed guidance offered on observation techniques, using documentary and electronic sources and physical artifacts, conducting interviews and analyzing and writing up case-study data.

Data Base

The use of case studies to build and test theories in political science and the other social sciences has increased in recent years. Many scholars have argued that the social sciences rely too heavily on quantitative research and formal models and have attempted to develop and refine rigorous methods for using case studies. This text presents a comprehensive analysis of research methods using case studies and examines the place of case studies in social science methodology. It argues that case studies, statistical methods, and formal models are complementary rather than competitive. The book explains how to design case study research that will produce results useful to policymakers and emphasizes the importance of developing policy-relevant theories. It offers three major contributions to case study methodology: an emphasis on the importance of within-case analysis, a detailed discussion of process tracing, and development of the concept of typological theories. *Case Studies and Theory Development in the Social Sciences* will be particularly useful to graduate students and scholars in social science methodology and the philosophy of science, as well as to those designing new research projects, and will contribute greatly to the broader debate about scientific methods.

Case Study Research Methods

Instructors and intelligence practitioners Beebe and Pherson have created a set of twelve class-tested cases on events in foreign intelligence, counterintelligence, terrorism, homeland security, law enforcement, and decision-making support. These case studies are designed to give analysts in-training a hands-on opportunity to apply structured analytic techniques to tackle real-life problems. Each case delivers a compelling narrative and set of step-by-step instructions that make teaching and learning effective. Questions at start of each case challenge the student to think critically and help students bring the case into focus. Narratives provide detail to give a realistic sense of complexity and challenges of the case. Recommended readings at end of each narrative allow further research. Sections entitled "Structured Analytic Techniques in Action" frame the analytic tasks and give step-by-step instructions

for applying three to five analytic techniques in a series of exercises for each case study. Photos, maps, figures, tables, boxes, and technique templates support analysis and instruction. A matrix of the cases and techniques used in each case provide students and instructors an all-in-one view of the contents.

Case Studies and Theory Development in the Social Sciences

Seminar paper from the year 2002 in the subject Didactics - Business economics, Economic Pedagogy, grade: 2.2 (B), University of Manchester (Manchester School of Management), language: English, abstract: At the beginning of any type of research, it is paramount for the researcher to determine the most appropriate methodology to carry out the study. While factors such as time and costs certainly play an important part in deciding how to approach a particular research problem, the subject of the research itself should ultimately determine the methods used. A good researcher will evaluate all available options prior to making a decision as to which methods to adapt in the light of being the most useful for the study at hand. This paper will focus on describing a variety of methods, namely questionnaires, interviews, and case studies. Each chapter will give a brief introduction about the method, and then highlight the main strengths and limitations of each approach. Attention is also given to induction, which is defined as a data-driven approach to research, while deduction is seen as theory-driven. As such, the notion of data-driven versus theory-driven will be explored briefly for each method.

Cases in Intelligence Analysis: Structured Analytic Techniques in Action

Providing a complete portal to the world of case study research, the Fourth Edition of Robert K. Yin's bestselling text *Case Study Research* offers comprehensive coverage of the design and use of the case study method as a valid research tool. This thoroughly revised text now covers more than 50 case studies (approximately 25% new), gives fresh attention to quantitative analyses, discusses more fully the use of mixed methods research designs, and includes new methodological insights. The book's coverage of case study research and how it is applied in practice gives readers access to exemplary case studies drawn from a wide variety of academic and applied fields. Key Features of the Fourth Edition Highlights each specific research feature through 44 boxed vignettes that feature previously published case studies Provides methodological insights to show the similarities between case studies and other social science methods Suggests a three-stage approach to help readers define the initial questions they will consider in their own case study research Covers new material on human subjects protection, the role of Institutional Review Boards, and the interplay between obtaining IRB approval and the final development of the case study protocol and conduct of a pilot case Includes an overall graphic of the entire case study research process at the beginning of the book, then highlights the steps in the process through graphics that appear at the outset of all the chapters that follow Offers in-text learning aids including "tips" that pose key questions and answers at the beginning of each chapter, practical exercises, endnotes, and a new cross-referencing table *Case Study Research, Fourth Edition* is ideal for courses in departments of Education, Business and Management, Nursing and Public Health, Public Administration, Anthropology, Sociology, and Political Science.

Research methods. Uses and limitations of questionnaires, interviews, and case studies

The authors describe the most popular structured and diagramming techniques and relate them to CASE (computer-aided systems engineering) tools. This instruction permits analysis and design to be done at the computer screen. A must reading for every analyst, programmer and D.P. manager.

Case Study Research

Teeming with practical examples, this guide promotes an integrated approach for carrying out a case study. With a background emphasis on how to ensure the reliability and validity of results, the different steps of this approach are detailed: assessing the appropriateness of a case study; preparation; selecting cases; data collection, analysis and interpretation; and reporting results

Structured Techniques

This book takes the relatively new concept of structured analytic techniques and defines its place in a taxonomy of analytic methods. It describes 50 techniques divided into eight categories, each corresponding to a book chapter. These techniques are especially needed in the field of intelligence analysis where analysts typically deal with incomplete, ambiguous and sometimes deceptive information.

The Case Study as Research Method

For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network.

Structured Analytic Techniques for Intelligence Analysis

A practical approach to strategy that demands logical thinking, rather than high level mathematics, in order to put theory into practice. It offers coherent guidance to combat potentially diverse and complex strategic decisions.

Computerworld

This four-volume major work collates and contextualises key papers on the use of case study in education. The collection brings together methodological publications and publications which provide exemplars of case study. The methodological material provides both critical analyses of case study and those which champion its use, offering at the same time a chronological map of the development of case study from its earliest uses to today. Framed by an introductory passage in each volume which seeks to provide a synopsis of the methodological discussion and a commentary on the exemplary material, this set provides for serious students in education original source material to appraise the method together with exemplary sample material to help them plan and organize their case studies. Volume One: Methodological issues around the use of case studies in social science Volume Two: Methodological issues around the use of case studies in education Volume Three: The case study in practice - general issues and specific examples Volume Four: Examples of case studies in education

Practical Strategy

Biographical research methods have become a useful and popular tool for contemporary social scientists. This book combines an exploration of the origins of this field with comparative examples of the ways biographical methods have been applied.

Case Study Methods in Education

Interviewing is one of the most common methods used in small-scale educational research. This book is about semi-structured interviews, in which the interviewer sets up a general structure by deciding in advance the ground to be covered and the main questions to be asked. The detailed structure is left to be worked out during the interview, and the person being interviewed has a fair degree of freedom in what to talk about, how much to say, and how to express it. Semi-structured interviewing is a very flexible technique for small-scale research. It is not suitable for studies involving large numbers of people, but is most helpful in mini-studies and case studies. Chapters address: (1) the use of interviews; (2) different kinds of interviews; (3) the interview schedule; (4) planning and preparation; (5) doing the interview; (6) analyzing the interview; and (7) reporting and communication. (Contains one figure, three references, and five suggestions for further reading.) (SLD)

Case Study Evaluations

The increasing use of computers for real-time control on board spacecrafts has brought with it a greater emphasis on the development methodology used for such systems. By their nature, spacecraft control computers have to operate unattended for long periods and because of the programmatics of space, systems are subject to a long development cycle. As a result, there are two distinct concerns, the first being that the development approach guarantees functional and timing correctness, the second being that problems, particularly those associated with timing, are considered as early as possible in the spacecraft development life cycle. The European Space Agency has, for a number of years, encouraged the development of software using HOOD. It was thus a natural next step to investigate the incorporation of time within the existing HOOD framework. This has proven to be very beneficial and this book describes the approach developed by the authors for handling Hard Real-Time applications. It describes both the background scheduling theory, provides practical examples of its application to real life problems, and demonstrates how it is used in the various phases of the development of Hard Real-Time systems.

The Turn to Biographical Methods in Social Science

Written by a co-developer of one of the most popular OOA/OOD methods, this exceptionally practical and authoritative casebook shows how object-oriented analysis and design are actually practiced in developing real systems--i.e., shows the insight (rather than the technique) that was applied to each point in a solution--false starts and all.

Case Study: Structural Evaluation of Heavy Wood Trusses at Corpus Christi Army Depot, Texas

Acoustic emission (AE) techniques have successfully been used for assuring the structural integrity of large rocket motorcases since 1963, and their uses have expanded to ever larger structures, especially as structural health monitoring (SHM) of large structures has become the most urgent task for engineering communities around the world. The needs for advanced AE monitoring methods are felt keenly by those dealing with aging infrastructures. Many publications have appeared covering various aspects of AE techniques, but documentation of actual applications of AE techniques has been mostly limited to reports of successful results without technical details that allow objective evaluation of the results. There are some exceptions in the literature. In this Special Issue of the Acoustics section of Applied Sciences, we seek contributions covering these exceptions cited here. Here, we seek contributions describing case histories of AE applications to large structures that have achieved the goals of SHM by providing adequate technical information supporting the success stories. Types of structures can include aerospace and geological structures, bridges, buildings, factories, maritime facilities, off-shore structures, etc. Experiences with AE monitoring methods designed and proven for large structures

Using Semi-structured Interviews in Small-scale Research

During the last three decades, information and communication technologies have fundamentally changed the way we work, live and communicate. The ubiquity of internet services, which become increasingly interactive and complex, together with enhanced connectivity, facilitated by innovative mobile devices, induces an ever-rising demand for computing, storage and data transmission capacities. Today, information systems (IS) constitute the backbone of the globalized economy and are indispensable for modern business and production processes. At the same time, environmental sustainability has evolved as the most pressing societal challenge of the 21st century, in particular due to the looming threats of climate change. By virtue of their global influence and reach, business companies significantly contribute to the creation of environmental problems, but owing to their organizational knowledge, capabilities and resources, they also have the capacity and ability to play a key role in shaping the path towards a more sustainable development. The companies leading the way have noticed that corporate sustainability is not necessarily a burden that negatively impacts their bottom line. If strategically managed, environmental product and process innovations can decrease operational costs, enhance corporate reputation, and differentiate from competitors. With regard to environmental sustainability, IS play a contradictory role: on the one hand, the manufacturing, operation and disposal of information technology (IT) infrastructure are responsible for serious environmental impacts: from the mining of conflict minerals to carbon dioxide emissions that equal those of the airline industry to enormous amounts of toxic e-waste. On the other hand, IS are perceived as key enablers of a "green" economy: environmental management systems and the reengineering of business processes can substantially reduce the environmental impacts of business organizations, while technological innovations provide opportunities to decrease the ecological footprint of end-user products and services. Many organizations have started to implement first environmental measures to decrease IT energy consumption and to reduce operational costs, mostly in an unstructured and uncoordinated manner though. Although Green IS practices feature a considerable potential to increase corporate environmentalism while creating promising business opportunities, the adoption of enterprise-wide cross-functional initiatives aimed at implementing Green IS has been rather slow. Economic uncertainties regarding the long-term effects of Green IS adoption and the lack of appropriate management frameworks have been identified as main inhibitors of an encompassing implementation of Green IS initiatives throughout the enterprise. In this context, this thesis addresses relevant research gaps, contributes to theory development in the evolving Green IS research discipline, develops practice-oriented management frameworks, and emphasizes the importance of following a strategic approach to leverage the competitive potential of Green IS. This cumulative thesis comprises an introduction that includes a literature review and a pre-study, four theory-based conceptual research articles, and two empirical studies, one of them building on qualitative, exploratory case study research whereas the other relies on quantitative data

which has been analyzed with structural equation modeling. This thesis targets four specific research goals to advance theory-building in Green IS research and to promote the adoption of Green IS in practice. First, this thesis clarifies and defines the central terms and key concepts Green IT, Green IS, Green IS strategy, and Green IS practices drawing on a transdisciplinary research approach. Second, the most important challenges and inhibitors of Green IS adoption are identified and characterized. In particular, the lack of management frameworks, which encourage a holistic implementation that follows a strategic rationale, the complexity of strategic Green IS alignment, the multi-dimensional performance impacts of cross-functional initiatives and, above all, the uncertainty relating to the business case of Green IS practices, are identified as the most pressing challenges. Third, current actions of business firms to address these challenges are examined. Building on exploratory case study research, distinctive Green IS strategies are identified in managerial practice. Most notably, the empirical insights from quantitative survey research suggest a positive relationship between Green IS adoption and firm competitiveness, thus decreasing the economic uncertainty which inhibits the implementation of far-reaching environmental initiatives. Fourth, practice-oriented management frameworks are developed. The fine-grained Green IS strategy concept advises the formulation of strategies addressing the corporate, competitive, and functional management level. The proposed typology of four Green IS strategies illustrates distinct strategic options, from which executives can choose under consideration of their competitive targets and the firm-specific context. To allow for consistency of Green IS strategies, the presented alignment framework facilitates coherence with economic and environmental corporate goals. Furthermore, the actors, roles and responsibilities relevant to the alignment process are described. In addition, a management framework for the holistic adoption of Green IS, which specifies decisive management areas and distinguishes between three degrees of environmental impacts, is presented along with a comprehensive catalogue of Green IS implementation measures. As a consequence, this research offers both empirical insights and conceptual models to advance the adoption of Green IS initiatives, thus meeting the challenges of climate change and turning corporate sustainability into a business opportunity.

Informationssysteme (IS) zeigen in Bezug auf ökologische Nachhaltigkeit gegensätzliche Eigenschaften. Einerseits verursachen die Herstellung, der Betrieb sowie die Entsorgung von Informationstechnologie (IT) – Infrastrukturen schwerwiegende negative Umweltauswirkungen: Vom Abbau von Konfliktmineralien über Kohlendioxidemissionen bis hin zu beträchtlichen Mengen giftigen Elektroschrotts. Andererseits werden IS als Schlüsseltechnologien für eine nachhaltige Wirtschaft gesehen. Umweltmanagementsysteme und die Umgestaltung von Geschäftsprozessen können den ökologischen Fußabdruck von Organisationen bedeutend verringern. Zudem eröffnen technologische Innovationen neuartige Möglichkeiten, die Umweltauswirkungen von Produkten und Dienstleistungen über den gesamten Lebenszyklus hinweg zu senken. Zahlreiche Organisationen haben damit begonnen, einzelne Green-IT-Maßnahmen zu implementieren um den Energieverbrauch und operative Kosten zu senken. Allerdings verfolgen die meisten Unternehmen hierbei keinen strukturierten oder strategischen Ansatz. Obwohl Green-IS-Initiativen beachtliche Potentiale zur Verbesserung der ökologischen Nachhaltigkeit von Organisationen bieten und gleichzeitig vielversprechende wirtschaftliche Chancen eröffnen, schreitet die Umsetzung von bereichsübergreifenden Green-IS-Maßnahmen in Unternehmen nur langsam voran. Ökonomische Unsicherheiten in Bezug auf die Rentabilität derartiger Maßnahmen sowie der Mangel an adäquaten Management-Frameworks werden in diesem Zusammenhang als zentrale Hinderungsgründe für eine strategische und ganzheitliche Umsetzung von Green-IS-Initiativen identifiziert. Diese Dissertation adressiert diese Hinderungsgründe, schafft Schlüsselkonzepte für den neuen Green-IS-Forschungszweig, entwickelt praxisorientierte Management-Frameworks und hebt die Bedeutung eines strategischen Ansatzes bei der Implementierung von Green IS hervor. Diese Forschungsarbeit offeriert empirische Einblicke wie auch konzeptionelle Modelle um die Umsetzung ganzheitlicher Green-IS-Initiativen in Organisationen voranzutreiben. Unternehmen haben somit die Chance, den Herausforderungen des Klimawandels verantwortungsvoll zu begegnen und gleichzeitig durch eine nachhaltige Unternehmensführung Wettbewerbsvorteile zu generieren.

STRUCTURED TECHNIQUES: THE BASIS FOR CASE

Based on their own experiences of in-depth case studies of software projects in international corporations, in this book the authors present detailed practical guidelines on the preparation, conduct, design and reporting of case studies of software engineering. This is the first software engineering specific book on the case study research method.

HRT-HOODTM: A Structured Design Method for Hard Real-Time Ada Systems

Case study research has a long history within the natural sciences, social sciences, and humanities, dating back to the early 1920's. At first it was a useful way for researchers to make valid inferences from events outside the laboratory in ways consistent with the rigorous practices of investigation inside the lab. Over time, case study approaches garnered interest in multiple disciplines as scholars studied phenomena in context. Despite widespread use, case study research has received little attention among the literature on research strategies. The Encyclopedia of Case Study Research provides a compendium on the important methodological issues in conducting case study research and explores both the strengths and weaknesses of different paradigmatic approaches. These two volumes focus on the distinctive characteristics of case study research and its place within and alongside other research methodologies. Key Features Presents a definition of case study research that can be used in different fields of study Describes case study as a research strategy rather than as a single tool for decision making and inquiry Guides rather than dictates, readers' understanding and applications of case study research Includes a critical summary in each entry, which raises additional matters for reflection Makes case study relevant to researchers at various stages of their careers, across philosophic divides, and throughout diverse disciplines Key Themes Academic Disciplines Case Study Research Design Conceptual Issues Data Analysis Data Collection Methodological Approaches Theoretical Traditions Theory Development and Contributions From Case Study Research Types of Case Study Research

Structural change, fundamentals, and growth : a framework and case studies

For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network.

Case Studies in Object-oriented Analysis and Design

This book gives a compelling analysis and explanation of shifts in China's non-intervention policy in Africa. Systematically connecting the neoclassical realist theoretical logic with an empirical analysis of China's intervention in African civil wars, the volume highlights a methodical interlink between theoretical and empirical analysis that takes into consideration the changing status of rising powers in the global system and its effect on their intervention behaviour. Based on field research and expert interviews, it provides a rigorous analysis of China's emergent intervention behaviour in some key African conflicts in Libya, South Sudan and Mali and broadens the study of external interventions in civil wars to include the intervention behaviour of non-Western rising powers.

Structural Health Monitoring of Large Structures Using Acoustic Emission—Case Histories

This easy-to-use handbook is a useful resource for all health professionals engaged in processes of evaluation in a variety of contexts within the world of healthcare. Encouraging an evidence-based approach to practice, it provides: * guidelines on how to design and evaluate an intervention * examples of good practice * reliable and easy-to-use measures * advice on how to work effectively. Designed to prompt self-evaluation and group project evaluation, it illustrates how simple evaluation methods can help to break down the divisions between research and practice. It shows how more practitioners can apply such methods to improve the quality of care as well as the treatments and services which they offer their patients and clients. The examples, drawn from clinical settings, community practice and work in the voluntary sector, demonstrate the kind of evaluation that can be undertaken by a small-scale team or a single practitioner with limited resources. The Evaluation Handbook will be a useful source of reference for those new to evaluation as well as more experienced managers and researchers.

Strategic information systems management for environmental sustainability : enhancing firm competitiveness with Green IS

For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network.

Case Study Research in Software Engineering

Case Study Research: Principles and Practices aims to provide a general understanding of the case study method as well as specific tools for its successful implementation. These tools can be utilized in all fields where the case study method is prominent, including business, anthropology, communications, economics, education, medicine, political science, social work, and sociology. Topics include the definition of a 'case study,' the strengths and weaknesses of this distinctive method, strategies for choosing cases, an experimental template for understanding research design, and the role of singular observations in case study research. It is argued that a diversity of approaches - experimental, observational, qualitative, quantitative, ethnographic - may be successfully integrated into case study research. This book breaks down traditional boundaries between qualitative and quantitative, experimental and nonexperimental, positivist and interpretivist.

Computer Literature Bibliography: 1946-1963

Psychology remains an invaluable resource for students of psychology throughout their studies.

Encyclopedia of Case Study Research

Featuring contributions from some of the leading researchers in the field of SEM, most chapters are written by the author(s) who originally proposed the technique and/or contributed substantially to its development. Content highlights include latent variable mixture modeling, multilevel modeling, interaction modeling, models for dealing with nonstandard and noncompliance samples, the latest on the analysis of growth curve and longitudinal data, specification searches, item parceling, and equivalent models. This volume will appeal to educators, psychologists, biologists, business professionals, medical researchers, and other social and health scientists. It is assumed that the reader has mastered the equivalent of a graduate-level multivariate statistics course that included coverage of introductory SEM techniques.

Computerworld

The Prentice Hall Essence of Computing Series provides a concise, practical and uniform introduction to the core components of an undergraduate computer science degree. Acknowledging the recent changes within Higher Education, this approach uses a variety of pedagogical tools - case studies, worked examples and self-test questions, to underpin the students learning. The Essence of Structured Systems Analysis is an introduction to the concepts and development of structured systems analysis. It assumes no prior knowledge of the subject, and aims to give students the necessary information, examples and exercises to allow them to develop practical skills in structured techniques. The book is divided into three parts: the introduction, the techniques and the methods. The introduction gives a history of the subject and identifies central techniques and how these may be supported with software tools. The techniques section identifies conventions and gives worked examples to illustrate the principles. Finally, the methods part looks at two of the most popular structured methods: SSADM and Yourdon. A life cycle is set out for each, and the role of the various techniques in each method is described. There are also brief descriptions of other techniques in the methods.

Proceedings: CE Workshop on Reservoir Releases

This book comprises the selected contributions from the 2nd World Congress on Condition Monitoring (WCCM 2019), held in Singapore in December 2019. The contents focus on digitalisation for condition monitoring with the emergence of the fourth industrial revolution (Industry 4.0) and the Industrial Internet-of-Things (IIoT). The book covers latest research findings in the areas of condition monitoring, structural health monitoring, and non-destructive testing which are relevant for many sectors including aerospace, automotive, civil, oil and gas, marine, and manufacturing industries. Different monitoring systems and non-destructive testing methods are discussed to avoid failures, increase lifespans, and reduce maintenance costs of equipment and machinery. The broad scope of the contents will make this book interesting for academics and professionals working in the areas of non-destructive evaluation and condition monitoring.
