SAGE Readings for Introductory Sociology

This brief anthology for introductory sociology is a collection of 24 short readings that illustrate key concepts in sociology, relate to the everyday lives of students, and spark good classroom discussions. The selections represent four theoretical traditions in sociology (functionalism, symbolic interaction, conflict theory, feminism) and show the range and diversity of sociology and the people who practice it. The book is designed for instructors who want to expose students to some original scholarship in their first sociology course, but who do not want to adopt a comprehensive reader along with the core text they are using.

Analyzing American Democracy

Providing the tools for critical thinking, the fifth edition of *Analyzing American Democracy: Politics and Political Science* relies on statistical analysis, constitutional scholarship, and theoretical foundations to introduce the structure, process, and outcomes of the U.S. political system. Interpretation and implications of the 2022 mid-term elections and full results of the 2020 census are included, as are discussions of: the January 6th commission, major developments in the Supreme Court, the Covid-19 pandemic, the Russian invasion of Ukraine, and other key political events that shape domestic, foreign, judicial, and economic policies. For introductory courses in American government, this text covers theory and methods as well. New to the Fifth Edition • New and updated statistical data reflecting the 2020 census and the 2022 midterm elections, and discussions of the implications of the data and the results. • Offers a retrospective analysis of the entire Trump presidency and the first years of the Biden presidency. • Examines contemporary questions of social justice and anticipates upcoming challenges to voting rights, affirmative action policies, health care and reproductive rights, and protections for ethnic minorities and the LGBT community. • Previews the policy implications of an increasingly partisan Supreme Court, recaps the controversial recent decisions on health care, abortion, and environmental policy, and covers the historic confirmation of new justice Ketanji Brown-Jackson.

The Engaged Sociologist

This fully updated edition of *The Engaged Sociologist* by Kathleen Odell Korgen carries the public sociology movement into the classroom, while at the same time providing an engaging overview of the entire field. It demonstrates how to think sociologically, to develop a sociological eye, and to use sociological tools to become effective participants in a democratic society. Perfect as a supplement for an introductory course, or as a main text for any course that has public sociology at its roots, this inspiring book will serve as a guidebook to any student who is passionate about applying sociological concepts to the world around them.

Global Slump

Global Slump analyzes the global financial meltdown as the first systemic crisis of the neoliberal stage of capitalism. It argues that—far from having ended—the crisis has ushered in a whole period of worldwide economic and political turbulence. In developing an account of the crisis as rooted in fundamental features of capitalism, *Global Slump* challenges the view that its source lies in financial deregulation. The book locates the recent meltdown in the intense economic restructuring that marked the recessions of the mid-1970s and early 1980s. Through this lens, it highlights the emergence of new patterns of world inequality and new centers of accumulation, particularly in East Asia, and the profound economic instabilities these produced. *Global Slump* offers an original account of the “financialization” of the world economy during this period, and explores the intricate connections between international financial markets and new forms of debt and dispossession, particularly in the Global South. Analyzing the massive intervention of the world’s central banks to stave off another Great Depression, *Global Slump* shows that, while averting a complete meltdown, this intervention also laid the basis for recurring crises for poor and working class people: job loss, increased poverty and inequality, and deep cuts to social programs. The book takes a global view of these processes, exposing the damage inflicted on countries in the Global South, as well as the intensification of racism and attacks on migrant workers. At the same time, *Global Slump* also traces new patterns of social and political resistance—from housing activism and education struggles, to mass strikes and protests in Martinique, Guadeloupe, France and Puerto Rico—as indicators of the potential for building anti-capitalist opposition to the damage that neoliberal capitalism is inflicting on the lives of millions.

Sociology

This carefully edited companion anthology provides provocative, eye-opening examples of the practice of sociology in a well-edited, well-designed, and affordable format. It includes short articles, chapters, and excerpts that examine common everyday experiences, important social issues, or distinct historical events that illustrate the relationship between the individual and society. The new edition will provide more detail regarding the theory and/or history related to each issue presented. The revision will also include more coverage of global issues and world religions.

Presentation Secrets

Plan, create, and deliver amazing presentations! Alexei Kapterev's online presentation on presentations has seen more than one million views, all with no advertising or promotion. Building on this hit, he now brings us *Presentation Secrets* outlining his successful tactics for planning, producing, and presenting memorable and unique presentations. The author shares his insight, wisdom, and advice with impressive clarity and detail, covering the three main components required to a presentation: storyline design, slide design, and delivery. *Presentation Secrets* lets you get to work immediately, fully prepared, armed with confidence, and ready to inspire. Teaches everything that goes into a successful and memorable presentation. Helps create a storyline, from planning the beginning, middle, and end, to establishing key points, to making a presentation scalable. Discusses how to design a slide template that meets your goals, ensure consistency, and find focal points. Dissects the delivery of a presentation, including how to create "a character".

Imagining Society

Explore sociology's key concepts, theories, methods, and original voices—all in one innovative text. *Imagining Society: An Introduction to Sociology* is an versatile and economical resource for your introductory course. With this single text, you can: Teach the discipline's history, key concepts, subfields, and contributions to social science. Expose students to the central building blocks of sociology—short excerpts from the original works of classical and contemporary sociologists. Explain sociology's key theoretical insights by connecting them to specific issues. Describe and illustrate the methods used by sociologists—not just in the opening chapter, but throughout the entire text. Engage students in thoughtful, self-directed projects and activities. This title is accompanied by a complete teaching and learning package.

SAGE Readings for Introductory Sociology

SAGE Readings for Introductory Sociology is a concise, affordable anthology that contains 22 popular sociology statements designed to introduce readers to the sociological perspective. Kimberly McGann puts together readings that cover core topics in sociology, including culture, socialization, interaction, deviance, gender, class, and race. An alternate, topical table of contents suggests ways to match readings to other subfields in sociology (like family, education, work, and religion), and identifies readings that reflect four theoretical traditions: functionalism, symbolic interactionism, conflict theory, and feminism.

The Case for Marriage

A groundbreaking look at marriage, one of the most basic and universal of all human institutions, which reveals the emotional, physical, economic, and sexual benefits that marriage brings to individuals and society as a whole. *The Case for Marriage* is a critically important intervention in the national debate about the future of family. Based on the authoritative research of family sociologist Linda J. Waite, journalist Maggie Gallagher, and a number of other scholars, this book's findings dramatically contradict the anti-marriage myths that have become the common sense of most Americans. Today a broad consensus holds that marriage is a bad deal for women, that divorce is better for children when parents are unhappy, and that marriage is essentially a private choice, not a public institution. Waite and Gallagher flatly contradict these assumptions, arguing instead that by a broad range of indices, marriage is actually better for you than being single or divorced—physically, materially, and spiritually. They contend that married people live longer, have better health, earn more money, accumulate more wealth, feel more fulfillment in their lives, enjoy more satisfying sexual relationships, and have happier and more successful children than those who remain single, cohabit, or get divorced. *The Case for Marriage* combines clearheaded analysis, penetrating cultural criticism, and practical advice for strengthening the institution of marriage, and provides clear, essential guidelines for reestablishing marriage as the foundation for a healthy and happy society. "A compelling defense of a sacred union. *The Case for Marriage* is well written and well argued, empirically rigorous and learned, practical and commonsensical." -- William J. Bennett, author of *The Book of Virtues* "Makes the absolutely critical point that marriage has been misrepresented and misunderstood." -- *The Wall Street Journal*

Discover Sociology

The authors are proud sponsors of the 2020 SAGE Keith Roberts Teaching Innovations Award—enabling graduate students and early career faculty to attend the annual ASA pre-conference teaching and learning workshop. What key social forces construct and transform our lives as individuals and as members of society? How does our social world shape us? How do we shape our world? Discover Sociology presents sociology as a discipline of curious minds. The authors inspire curiosity about the social world and empower students by providing the theoretical, conceptual, and empirical tools they need to understand, analyze, and even change the world in which they live. Organized around four main themes—The Sociological Imagination, Power and Inequality, Technological Transformations of Society, and Globalization—the book illuminates the social roots of diverse phenomena and institutions, ranging from poverty and deviance to capitalism and the nuclear family. "Behind the Numbers" features illustrate the practical side of sociology and shows students how to be critical consumers of social science data reported in the media. And every chapter addresses the question, "What can I do with a sociology degree?" by linking the knowledge and skills acquired through studying sociology with specific jobs and career paths. Functions Modeling Change: A Preparation for Calculus, 4th Edition

The fourth edition of this market-leading text helps instructors motivate concepts, and students develop critical thinking skills. Functions Modeling Change 4th edition, is designed to accomplish the main goals of the Precalculus course: to build a solid mathematical foundation and prepare students for Calculus. The authors achieve this by focusing on a small number of key topics, thereby emphasising depth of understanding rather than breadth of coverage. Functions Modeling Change 4th edition, presents each function symbolically, numerically, graphically and verbally (the Rule of Four). Additionally, a large number of real-world applications, examples, and problems enable students to create mathematical models that relate to the world around them.

Introduction to Action Research

How do social researchers know how to select the action research (AR) approach most appropriate for their study? This book provides an overview of the different approaches. The authors introduce the history, philosophy, social change agenda, methodologies, ethical arguments for, and fieldwork tools of AR. They present an extensive range of cases, some from their own experience and, untypically, they rehearse failures as well as successes. The book will prove invaluable for both newcomers and experienced researchers and practitioners.

The Practical Skeptic

Using a conceptual framework, this work includes classic sociological research writings, as well as pieces on topics of interest to students. It serves as a useful companion to The Practical Skeptic: Core Concepts in Sociology, 2nd Edition or other sociology texts.

The Sociology Student's Guide to Writing

The Sociology Student's Guide to Writing, by Angelique Harris and Alia R. Tyner-Mullings, is a brief, economical reference work that gives practical advice about the writing tasks and issues that undergraduate students face in their first sociology courses. Along with more traditional topics, it incorporates valuable information about composing emails, writing for online forums, and using technology for information-gathering and note-taking. Used by itself or in combination with other texts, this book will

increase the quality of student writing and enhance their knowledge of how sociologists communicate in writing.

Longitudinal Data Analysis

"This book provides accessible treatment to state-of-the-art approaches to analyzing longitudinal studies. Comprehensive coverage of the most popular analysis tools allows readers to pick and choose the techniques that best fit their research. The analyses are illustrated with examples from 12 major longitudinal data sets including practical information about their content and design. Illustrations from popular software packages offer tips on how to interpret the results. Each chapter features suggested readings for further study and a list of articles that further illustrate how to implement the analysis and report the results. An accompanying website provides syntax examples for several software packages for each of the chapter examples. Although many of the examples address health or social science questions related to aging, readers from other disciplines will find the analyses relevant to their work. In addition to demonstrating statistical analysis of longitudinal data, the book shows how to interpret and analyze the results within the context of the research design. Although most chapters emphasize the use of large studies collected over long term periods, much of the book is also relevant to researchers who analyze data collected in shorter time periods. The book opens with issues related to using publicly available data sets including a description of the goals, designs, and measures of the data. The next 10 chapters provide non-technical, practical introductions to the concepts and issues relevant to longitudinal analysis, including: weighting samples and adjusting designs for longitudinal studies; missing data and attrition; measurement issues related to longitudinal research; the use of ANOVA and regression for averaging change over time; mediation analysis for analyzing causal processes; growth curve models using multilevel regression; longitudinal hypotheses using structural equation modeling (SEM); latent growth curve models for evaluating individual trajectories of change; dynamic SEM models of change; and survival (event) analysis. Examples from longitudinal data sets such as the Health and Retirement Study, the Longitudinal Study of Aging, and Established Populations for Epidemiologic Studies of the Elderly as well as international data sets such as the Canadian National Population Health Survey and the English Longitudinal Study of Aging, illustrate key concepts. An ideal supplement for graduate level courses on data analysis and/or longitudinal modeling taught in psychology, gerontology, human development, family studies, medicine, sociology, social work, and other behavioral, social, and health sciences, this multidisciplinary book will also appeal to researchers in these fields."--

Mapping the Social Landscape

The author is a proud sponsor of the 2020 SAGE Keith Roberts Teaching Innovations Award—enabling graduate students and early career faculty to attend the annual ASA pre-conference teaching and learning workshop. Mapping The Social Landscape is one of the most established and widely-used readers for Introductory Sociology. The organization follows that of a typical introductory sociology course and provides coverage of key concepts including culture, socialization, deviance, social structure, social inequality, social institutions, and social change. Susan J. Ferguson selects, edits, and introduces 58 readings representing a plurality of voices and views within sociology. The selections include classic statements from great thinkers like C. Wright Mills, Karl Marx, and Max Weber, as well as the works of contemporary scholars who address current social issues. Throughout this collection, there are many opportunities to discuss individual, interactional, and structural levels of society; the roles of race, ethnicity, class, gender, and sexuality in shaping social life; and the intersection of statuses and identities. Included with this title: The password-protected Instructor Resource Site (formally known as SAGE Edge) offers access to all text-specific resources, including a test bank and editable, chapter-specific PowerPoint® slides.

"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need to know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)." - online AHRQ blurb, <http://www.ahrq.gov/qual/nursesfdbk/>

Readings in Introductory Sociology

This 25th anniversary edition of the Annual Review of Nursing Research is focused on nursing science in vulnerable populations. Identified as a priority in the nursing discipline, vulnerable populations are discussed in terms of the development of nursing science, diverse approaches in building the state of the science research, integrating biologic methods in the research, and research in reducing health disparities. Topics include: Measurement issues Prevention of infectious diseases among vulnerable populations Genomics and proteomics methodologies for research Promoting culturally appropriate interventions Community-academic research partnerships with vulnerable populations Vulnerable populations in Thailand: women living with HIV/AIDS As in all volumes of the Annual Reviews, leading nurse researchers provide students, other researchers, and clinicians with the foundations for evidence-based practice and further research.

It's surprising that the term "heterosexuality" is less than 150 years old and that heterosexuality's history has never before been written, given how obsessed we are with it. In *Straight*, independent scholar Hanne Blank delves deep into the contemporary psyche as well as the historical record to chronicle the realm of heterosexual relations--a subject that is anything but straight and narrow. Consider how Catholic monasticism, the reading of novels, the abolition of slavery, leisure time, divorce, and constipation of the bowels have all at some time been labeled enemies of the heterosexual state. With an extensive historical scope and plenty of juicy details and examples, *Straight* provides a fascinating look at the vagaries, schisms, and contradictions of what has so often been perceived as an irreducible fact of nature.

Deciding when and how to retire are among the most important decisions most people make. Can they be depended on to plan with foresight and make sound decisions? According to standard economic analysis the answer is a qualified "yes." But studies by psychologists, sociologists, and economists themselves raise doubts about this comforting appraisal. This volume by analysts trained in economics

and other disciplines suggests that retirement planning and decisions fall far short of the rational ideal. Gary Burtless explains what economic research has to say about retirement behavior. Annamaria Lusardi reports that many people in their fifties and older say they have not even thought about retirement. Mathey Rabin and Ted O'Donoghue show that procrastination can cause huge economic losses. Robert Axtell and Joshua Epstein show that herd behavior explains observed patterns of retirement behavior better than does the assumption of rational decisionmaking. George Loewenstein, Drazen Prelec, and Roberto Weber report that many people incorrectly anticipate what retirement will be like and rationalize whatever decision they have made. David Fetherstonhaugh and Lee Ross report experimental evidence that the effect of Social Security provisions may depend on how these policies are "framed" as well as on the specific content of those policies. These and other authors also explore the broader implications of these behavioral patterns. Copublished with Russell Sage Foundation

Behavioral Dimensions of Retirement Economics

Within the past 15 years, the field of archival studies around the world has experienced unprecedented growth and archival studies graduate education programs today have among the highest enrollments in any information field. During the same period, there has also been unparalleled expansion and innovation in the diversity of methods and theories being applied in archival scholarship. Global in scope, *Research in the Archival Multiverse* compiles critical and reflective essays across a wide range of emerging research areas and interests in archival studies with the aim of providing current and future archival academics with a text addressing possible methods and theoretical frameworks that have been and might be used in archival scholarship. More than a collation of research methods for handy reference, this volume advocates for reflexive research practice as a means by which to lay bare the fuzziness and messiness of research. Whereas research in the form of published research papers and juried conference presentations provide a view of the study framed in terms of research questions and findings, reflexive research practice reveals the context of the study and chains of situations, choices, and decisions that influence the trajectories of the studies themselves. Such elucidations from the position of the researcher are instructive for others, who may be inspired to apply or adapt the method for their own research. *** "This book is a landmark publication on research in archival science, tracing the development of ideas in the discipline in part one, then exploring possibilities and pathways in the following chapters. It is essential reading on the evolution and progression of the discipline, particularly for every Masters and PhD student in archival science, whether looking for a deeper understanding of archival theory or inspiration on research design and process. It will be invaluable to all archival educators, but particularly to supervisors of research students." --Karen Anderson, *Archives and Manuscripts*, 2017 *** "The compilation reflects an array of directions in which research in the broadly defined area of archives is heading. While an ambitious collection, it in no way limits our understanding of the multiverse; in fact, quite the opposite, it hints at the notion that the multiverse may be limitless." --*Library and Information Science Research* 39 (2017) 159 (Series: ?Social Informatics) [Subject: Research Studies, Digital Studies, Archival Science, History]

Arguing From Evidence in Middle School Science

Sudhir Venkatesh the young sociologist who became famous in *Freakonomics* (Why do drug dealers still live with their moms?) describes his time living with the gangs on the Southside of Chicago and answers another question: what's it like to live in hell? In the Robert Taylor Homes projects on Chicago's South Side, Sudhir befriends J.T., a gang leader for the Black Kings. As he slowly gains J.T.'s trust, one day, in order to convince Sudhir of his own CEO-like qualities, J.T. makes him leader of the gang... Why does J.T. make his henchmen, the 'shorties', stay in school? What is the difference between a 'regular' hustler and a 'hype' - and is Peanut telling him the truth about which she is? And, when the FBI finally starts cracking down on the Black Kings, is it time to get out - or is it too late?

Research in the Archival Multiverse

A range of perspectives on the complex political, philosophical, and pragmatic implications of opening research and scholarship through digital technologies. The Open Access Movement proposes to remove price and permission barriers for accessing peer-reviewed research work--to use the power of the internet to duplicate material at an infinitesimal cost-per-copy. In this volume, contributors show that open access does not exist in a technological vacuum; there are complex political, philosophical, and pragmatic implications for opening research through digital technologies. The contributors examine open access across spans of colonial legacies, knowledge frameworks, publics and politics, archives and digital preservation, infrastructures and platforms, and global communities.

Reassembling Scholarly Communications

Drawing on studies of social class, crime and deviance, education, work in bureaucracies and changes in religious and political organizations, this Very Short Introduction explores the tension between the individual's place in society and society's role in shaping the individual, and demonstrates the value of sociology for understanding the modern world. In this new edition Steve Bruce discusses the continuing arguments for social egalitarianism, considering issues such as gay marriage, women in combat roles, and the 2010 Equality Act to debunk contemporary arguments against parity. As gender divisions are increasingly questioned he looks ahead to the likely consequences of this for society. Delving into the theory of sociology, Bruce also argues that the habit of dividing sociology into apparently competing 'sects' is misleading, and shows how a new understanding of the disciplinary background of many of the most famous theorists, which shows that much social theory is actually philosophy or literary theory, will prove useful to today's sociologists. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

You May Ask Yourself

Imagining Sociology introduces students to the concept of the sociological imagination and provides them with the foundational concepts and theories that will help them use this lens to understand the social world. Organized around the themes of social inequality, social institutions, and social change, the text introduces the key ideas of sociology in a student-friendly, easy-to-understand way. Each chapter contains two primary-source readings, by either classical theorists or contemporary researchers, carefully integrated into the text, and critical reading questions encourage students to make connections between the readings and the key ideas in the chapter. Activity boxes in each chapter provide ideas for thought-provoking class activities that will capture students' interest (all class-tested by the author), while highlight boxes offer deeper analysis of important contemporary social issues, such as gender and racial inequality or the effects of the COVID-19 pandemic.

Global Feminist Autoethnographies bears witness to our displacements, disruptions, and distress as tenured faculty, faculty on temporary contracts, graduate students, and people connected to academia during COVID-19. The authors document their experiences arising within academia and beyond it, gathering narratives from across the globe—Australia, Canada, Ghana, Finland, India, Norway, South Africa, the United Kingdom, the United States along with transnational engagements with Bolivia, Iran, Nepal, and Taiwan. In an era where the older rules about work and family related to our survival, wellbeing, and dignity are rapidly being transformed, this book shows that distress and traumas are emerging and deepening across the divides within and between the global North and South, depending on the intersecting structures that have affected each of us. It documents our distress and trauma and how we have worked to lift each other up amidst severe precarities. A global co-written project, this book shows how we are moving to decolonize our scholarship. It will be of interest to an interdisciplinary array of scholars in the areas of intersectionality, gender, family, race, sexuality, migration, and global and transnational sociology.

Becker the Researcher

An inspiring narrative of discovery and a cautionary tale of a man's strength of purpose finally undermined by principled stubbornness—a complicated human tale of science in the 20th century.

Tricks of the Trade

Drawing on more than four decades of experience as a researcher and teacher, Howard Becker now brings to students and researchers the many valuable techniques he has learned. Tricks of the Trade will

help students learn how to think about research projects. Assisted by Becker's sage advice, students can make better sense of their research and simultaneously generate fresh ideas on where to look next for new data. The tricks cover four broad areas of social science: the creation of the "imagery" to guide research; methods of "sampling" to generate maximum variety in the data; the development of "concepts" to organize findings; and the use of "logical" methods to explore systematically the implications of what is found. Becker's advice ranges from simple tricks such as changing an interview question from "Why?" to "How?" (as a way of getting people to talk without asking for a justification) to more technical tricks such as how to manipulate truth tables. Becker has extracted these tricks from a variety of fields such as art history, anthropology, sociology, literature, and philosophy; and his dazzling variety of references ranges from James Agee to Ludwig Wittgenstein. Becker finds the common principles that lie behind good social science work, principles that apply to both quantitative and qualitative research. He offers practical advice, ideas students can apply to their data with the confidence that they will return with something they hadn't thought of before. Like *Writing for Social Scientists, Tricks of the Trade* will bring aid and comfort to generations of students. Written in the informal, accessible style for which Becker is known, this book will be an essential resource for students in a wide variety of fields. "An instant classic. . . . Becker's stories and reflections make a great book, one that will find its way into the hands of a great many social scientists, and as with everything he writes, it is lively and accessible, a joy to read."—Charles Ragin, Northwestern University

Developing Research Proposals

Pam Denicolo and Lucinda Becker recognize the importance of developing an effective research proposal for gaining either a place on a research degree program or funding to support research projects and set out to explore the main factors that that proposal writers need to attend to in developing successful proposals of their own. *Developing Research Proposals* will help readers to understand the context within which their proposal will be read, what the reviewers are looking for and will be influenced by, while also supporting the development of relevant skills through advice and practical activities.

Presenting Your Research

For many researchers, the need to present relevant and engaging material in the most effective way in an unfamiliar setting presents a potential barrier to their success as professionals. This handy guide tackles the obstacles to effective and successful presentations, considering the range of material which might be presented, the occasions which suit different types of material and the skills needed to present research in a way that is engaging and persuasive. This book addresses questions such as: Why should I give a paper and where might I give a paper? How does the conference system work? How do I prepare an abstract/outline/synopsis? How do I choose my material and prepare it for a conference presentation? How can I prepare effective conference aids? How can I overcome my nerves? How can I prepare and present effective posters for poster presentations? As with the other titles in the *Success in Research* series, this guide takes a hands-on approach and includes checklists, top tips, exercises and examples to help you remember what you have read and put it immediately to work! The *Success in Research* series, from Cindy Becker and Pam Denicolo, provides short, authoritative and accessible guides on key areas of professional and research development. Avoiding jargon and cutting to the chase of what you really need to know, these practical and supportive books cover a range of areas from presenting research to achieving impact, and from publishing journal articles to developing proposals. They are essential reading for any student or researcher interested in developing their skills and broadening their professional and methodological knowledge in an academic context.

Understanding Research for Social Policy and Social Work (Second Edition)

Thoroughly revised and expanded, this new edition of *Understanding Research for Social Policy and Social Work* shows readers the importance of research, how to interpret it, and how to effectively carry out and report research of their own. This landmark textbook is an essential guide to the methods, approaches, and debates that are required knowledge for students, policymakers, and practitioners.

Electromagnetism and Life

The environment is now thoroughly polluted by man-made sources of electromagnetic radiation with frequencies and magnitudes never before present. Man's activities have probably changed the earth's electromagnetic background to a greater degree than they have changed any other natural physical attribute of the earth. The evidence now indicates that the present abnormal electromagnetic

environment constitutes a significant health risk. There are also positive aspects of the relationship between electromagnetism and life. Clinical uses of electromagnetic energy are increasing and promise to expand into important areas in the near future. This book synthesizes the various aspects of the role of electricity in biology.

The Body Electric

The Body Electric tells the fascinating story of our bioelectric selves. Robert O. Becker, a pioneer in the field of regeneration and its relationship to electrical currents in living things, challenges the established mechanistic understanding of the body. He found clues to the healing process in the long-discarded theory that electricity is vital to life. But as exciting as Becker's discoveries are, pointing to the day when human limbs, spinal cords, and organs may be regenerated after they have been damaged, equally fascinating is the story of Becker's struggle to do such original work. The Body Electric explores new pathways in our understanding of evolution, acupuncture, psychic phenomena, and healing.

What Is a Case?

The concept of the case is a basic feature of social science research and yet many questions about how a case should be defined, selected, and judged are far from settled. The contributors to this volume probe the nature of the case and the ways in which different understandings of the concept affect the conduct and the results of research. The contributions demonstrate that the work of any given researcher is often characterised by some hybrid of these basic approaches, and it is important to understand that most research involves multiple definitions and uses of cases, as both specific empirical phenomena and as general theoretical categories.

Publishing Journal Articles

How do I go about writing a journal article? How do I maximise my chances of getting it published in a top journal? How do I know what journal to select? How do I best adapt my research work in order to get published? In this accessible, informative and entertaining book, Becker and Denicolo introduce the best practical strategies available to help you maximise your chances of success in getting your work published in the journal of your choice. This book offers down-to-Earth advice on such vital topics as: How to write and get the style right What to select for publication How to plan for success How to cope with writer's block Working with editors and reviewers How to cope with rejection This is a must-have book for anyone seeking to write for successful journal publication. The Success in Research series, from Cindy Becker and Pam Denicolo, provides short, authoritative and accessible guides on key areas of professional and research development. Avoiding jargon and cutting to the chase of what you really need to know, these practical and supportive books cover a range of areas from presenting research to achieving impact, and from publishing journal articles to developing proposals. They are essential reading for any student or researcher interested in developing their skills and broadening their professional and methodological knowledge in an academic context.

Evidence

Howard S. Becker is a master of his discipline. His reputation as a teacher, as well as a sociologist, is supported by his best-selling quartet of sociological guidebooks: *Writing for Social Scientists*, *Tricks of the Trade*, *Telling About Society*, and *What About Mozart? What About Murder?* It turns out that the master sociologist has yet one more trick up his sleeve—a fifth guidebook, *Evidence*. Becker has for seventy years been mulling over the problem of evidence. He argues that social scientists don't take questions about the usefulness of their data as evidence for their ideas seriously enough. For example, researchers have long used the occupation of a person's father as evidence of the family's social class, but studies have shown this to be a flawed measure—for one thing, a lot of people answer that question too vaguely to make the reasoning plausible. The book is filled with examples like this, and Becker uses them to expose a series of errors, suggesting ways to avoid them, or even to turn them into research topics in their own right. He argues strongly that because no data-gathering method produces totally reliable information, a big part of the research job consists of getting rid of error. Readers will find Becker's newest guidebook a valuable tool, useful for social scientists of every variety.

Research Handbook on the Sociology of Education

Presenting original contributions from the key experts in the field, the Research Handbook on the Sociology of Education explores the major theoretical, methodological, empirical and political challenges and pressing social questions facing education in current times.

The JFK Assassination

Revised February, 2011 I called the book a researcher's guide for a reason. This book is a compilation of the material I read about the assassination, but in a totally different format. Easy to read; direct and to the point. I tried to give as much information as possible. Obviously I could not possibly put all the information in one book, so I was a bit selective in the data I recorded. It contains numerous aspects of the case and nearly every line will lead the researcher to the source of the information so they can continue to look into that particular topic. When I started my research, my goal was to prove Lee Harvey Oswald did not murder John Kennedy. By the time I proved Oswald did not shoot Kennedy, I noticed Oswald did not shoot Tippett either. Noting where he was seen before the shooting and where he was after the shooting will prove he was not at the window at 12:30pm; I will prove my point. I determined Oswald did not have time to get into position to do the shooting. The motorcade was scheduled to pass the Book Depository at 12:25 pm. Oswald was in the lunch room at 12:15 and Bonnie Ray Williams was on the 6th floor, alone, until 12:20. A good sniper would have been in position well in advance of his prey's expected arrival, which Oswald was not. But wait there's more. . . Looking at some of the evidence from a totally different perspective, I was able to prove, a conspiracy. I compared the wounds, with the Bullet count, and the time statistics of the rifle. I assure you no one has looked at it from this viewpoint. The closest any author came to mentioning this concept was Harrison Livingstone's book, "High Treason."

Teaching in Higher Education

This book is designed to take you step by step through each teaching experience you will face. It includes advice, practical exercises, top tips and words of warning on: - seminar presentations to your peers - leading undergraduate seminars - choosing material for teaching - preparing productive teaching aids - giving lectures - dynamic learning environments - handling assessment - success as a guest speaker - mentoring This is a practical 'how-to' guide which is supported throughout by accessible explorations of how teaching can support your research. Written by lecturers who have taught for many years, the 'voice of experience' sections will support and encourage you in your move towards becoming a successful and confident educator. The Success in Research series, from Cindy Becker and Pam Denicolo, provides short, authoritative and accessible guides on key areas of professional and research development. Avoiding jargon and cutting to the chase of what you really need to know, these practical and supportive books cover a range of areas from presenting research to achieving impact, and from publishing journal articles to developing proposals. They are essential reading for any student or researcher interested in developing their skills and broadening their professional and methodological knowledge in an academic context.

Cross Currents

Discusses the impact of electromagnetic pollution on the human body, and describes alternate healing methods that make use of the body's innate electrical healing systems.

Sustainability Ethics and Sustainability Research

The book identifies the specific ethical aspects of sustainability and develops ethical tools to analyze them. It also provides a methodological framework to integrate ethical and scientific analyses of sustainability issues, and explores the notion of a new type of self-reflective inter- and transdisciplinary sustainability research. With this, the book aims to strengthen the overall ability of academics to contribute to the analysis and solution of sustainability issues in an inclusive and integrated way.

Writing for Social Scientists

Students and researchers all write under pressure, and those pressures—most lamentably, the desire to impress your audience rather than to communicate with them—often lead to pretentious prose, academic posturing, and, not infrequently, writer's block. Sociologist Howard S. Becker has written the classic book on how to conquer these pressures and simply write. First published nearly twenty years ago, Writing for Social Scientists has become a lifesaver for writers in all fields, from beginning students

to published authors. Becker's message is clear: in order to learn how to write, take a deep breath and then begin writing. Revise. Repeat. It is not always an easy process, as Becker wryly relates. Decades of teaching, researching, and writing have given him plenty of material, and Becker neatly exposes the foibles of academia and its "publish or perish" atmosphere. Wordiness, the passive voice, inserting a "the way in which" when a simple "how" will do—all these mechanisms are a part of the social structure of academic writing. By shrugging off such impediments—or at the very least, putting them aside for a few hours—we can reform our work habits and start writing lucidly without worrying about grades, peer approval, or the "literature." In this new edition, Becker takes account of major changes in the computer tools available to writers today, and also substantially expands his analysis of how academic institutions create problems for them. As competition in academia grows increasingly heated, *Writing for Social Scientists* will provide solace to a new generation of frazzled, would-be writers.

Electronic Commerce: Concepts, Methodologies, Tools, and Applications

Compiles top research from the world's leading experts on many topics related to electronic commerce. Covers topics including mobile commerce, virtual enterprises, business-to-business applications, Web services, and enterprise methodologies.

Developing Research Proposals

Pam Denicolo and Lucinda Becker recognize the importance of developing an effective research proposal for gaining either a place on a research degree program or funding to support research projects and set out to explore the main factors that that proposal writers need to attend to in developing successful proposals of their own. *Developing Research Proposals* will help readers to understand the context within which their proposal will be read, what the reviewers are looking for and will be influenced by, while also supporting the development of relevant skills through advice and practical activities. The authors draw together the key elements in the process of preparing and submitting a proposal and concludes with advice on responding to the results, successful or not, and their relevance to future proposals.

Understanding Research for Social Policy and Practice

It is vital for students, policy makers and practitioners engaged in social policy related fields to understand the importance and place of research and how to interpret and use research findings. They also need to know how to effectively carry out and report good quality research of their own. This landmark book, the first of its kind, will enable them to meet all of these challenges. "Understanding research for social policy and practice" conveys the excitement, importance and methodological diversity of social policy research and provides readers with appropriate knowledge to help them interpret and assess the research of others and to conduct high quality research. It combines lively and informed discussion of key issues, methods and approaches with practical hands-on guidance and advice and shows how and why social policy research should form a key foundation for future policy and practice. The book is essential reading for students of social policy, social work, sociology, criminology, nursing and other applied social sciences; their teachers; and policy makers and practitioners who would like to improve their use of research evidence and conduct research of their own.

Writing Successful Reports and Dissertations

Are you unsure what your report should look like or how you'll ever finish it in time? Are you freaking out about starting on an extended piece of writing? Help is here! Organizational Routines

One of the major challenges facing organization studies has been for a long time to develop an operational content to the notion of routines. This book offers important advances in this direction, both conceptually and through illuminating case studies. Giovanni Dosi, Sant Anna School of Advanced Studies, Pisa, Italy This book showcases advanced empirical research that applies the concept of organizational routines to understanding organizations and how they change and evolve. The contributions gathered in the book cover qualitative, quantitative, and archival methods for empirical research applying the concept of organizational routines. Specific issues highlighted include the use of event-sequence methods in the analysis of organizational routines, the impact of standard operating procedures on recurrent behaviour patterns, and the stability, resilience, and change of organizational routines. The book thus provides an overview of different empirical methods applied to study organizational routines, and of their prerequisites, analytical power, and contribution. This comprehensive book will be of great interest to scholars and postgraduate students in the fields of organization theory, strategy, and organization behaviour. Researchers in organization, management and economic science, organizational change and evolutionary theories will also find this book invaluable.

What About Mozart? What About Murder?

In 1963, Howard S. Becker gave a lecture about deviance, challenging the then-conventional definition that deviance was inherently criminal and abnormal and arguing that instead, deviance was better understood as a function of labeling. At the end of his lecture, a distinguished colleague standing at the back of the room, puffing a cigar, looked at Becker quizzically and asked, "What about murder? Isn't that really deviant?" It sounded like Becker had been backed into a corner. Becker, however, wasn't defeated! Reasonable people, he countered, differ over whether certain killings are murder or justified homicide, and these differences vary depending on what kinds of people did the killing. In *What About Mozart? What About Murder?*, Becker uses this example, along with many others, to demonstrate the different ways to study society, one that uses carefully investigated, specific cases and another that relies on speculation and on what he calls "killer questions," aimed at taking down an opponent by citing invented cases. Becker draws on a lifetime of sociological research and wisdom to show, in helpful detail, how to use a variety of kinds of cases to build sociological knowledge. With his trademark conversational flair and informal, personal perspective Becker provides a guide that researchers can use to produce general sociological knowledge through case studies. He champions research that has enough data to go beyond guesswork and urges researchers to avoid what he calls "skeleton cases," which use fictional stories that pose as scientific evidence. Using his long career as a backdrop, Becker delivers a winning book that will surely change the way scholars in many fields approach their research.

What is Real?

Every physicist agrees quantum mechanics is among humanity's finest scientific achievements. But ask what it means, and the result will be a brawl. For a century, most physicists have followed Niels Bohr's Copenhagen interpretation and dismissed questions about the reality underlying quantum physics as meaningless. A mishmash of solipsism and poor reasoning, Copenhagen endured, as Bohr's students vigorously protected his legacy, and the physics community favoured practical experiments over philosophical arguments. As a result, questioning the status quo long meant professional ruin. And yet, from the 1920s to today, physicists like John Bell, David Bohm, and Hugh Everett persisted in seeking the true meaning of quantum mechanics. *What is Real?* is the gripping story of this battle of ideas and the courageous scientists who dared to stand up for truth.

Deciphering Sociological Research

Sociological research methods are a key component of teaching and courses at all levels, yet courses often fail to catch light for lack of effective student books or provoke smouldering resentment from students at misplaced enthusiasm for recondite statistics. Gerry Rose's new book should go a long way to remedy these problems. It is a complete teaching course with a clear rationale and a distinctive approach to the topic, unblemished by epistemological or prescriptive polemic. Its method is to present through the analysis of twelve pieces of published research reprinted in the book the systematic deciphering of research in relation to the key issues of methodology. The first nine discursive chapters discuss the main research methods topics - including concepts and indicators, sampling, data analysis and the relationship of theory to evidence - balancing the problems of quantitative data with the treatment of qualitative data and fieldwork studies. The papers - shortened articles from British, US and Australian journals - are put through the methodological hoops and systematically compared and

assessed. Additionally, each chapter is provided with a full set of exercises and the book also includes a glossary of terms. This straightforward and business-like book will be welcomed by all teachers and professional sociologists and also by social researchers who are concerned with examining or preparing research reports. Even authors and journal editors will find it provoking and useful.

Cross Currents

"A fascinating, thoughtful, and accessible account of the emerging field of electromedicine. A timely and eloquent warning on the hazards of electronic pollution."—Jeremy Rifkin, author of *The Hydrogen Economy* At the same time that exciting insights about electromedicine's powerful ability to use the body's inherent healing abilities are emerging, electromagnetic fields radiating from power lines, radar, microwave ovens, VDTs, satellites, radios, and even electric blankets are putting our health at serious risk. Researchers are finding that this radiation correlates with increases in cancer, birth defects, depression, learning disabilities, chronic fatigue syndrome, Alzheimer's, AIDS, and sudden infant death syndrome. In this groundbreaking book, Robert O Becker explains how new and nontraditional healing techniques such as acupuncture, homeopathy, visualization, hypnosis, and electrotherapy work through an invisible common source—the body's electrical system. He also offers practical ways to protect ourselves in our homes and offices from the hazardous effects of electromagnetic pollution and teaches us how to engage the healing energies of electromagnetism. Dr. Becker's powerful synthesis reshapes the future of medicine by putting life energy into our medical perspective and enabling us to see the body in its total living environment—the earth's electromagnetic field.

Children Caring for Parents with HIV and AIDS

This ground-breaking book focuses on the experiences and perspectives of children and young people who care for a parent with HIV in the global North and South. Drawing on in-depth qualitative research from the UK and Tanzania, the book presents a unique insight into the similarities and differences in children's and parents' experiences across diverse socio-economic, cultural and welfare contexts. The book makes a significant contribution to the growing research evidence on children and young people with caring responsibilities ('young carers') and the impacts of HIV and AIDS on families globally. It examines caring relationships within families affected by HIV and AIDS; the outcomes of caregiving; children's and families' resilience; the factors influencing whether children become involved in care work; and local and global policy responses. It also provides insight into the perspectives of parents living with HIV and service providers working with families. This book will be of interest to policy makers and practitioners in the field of HIV and AIDS, and to researchers, academics and students concerned with international development, social policy, human geography, childhood and youth studies, social work, health and social care, education, children's services and nursing and palliative care.

Mestizo International Law

The development of international law is conventionally understood as a history in which the main characters (states and international lawyers) and events (wars and peace conferences) are European. Arnulf Becker Lorca demonstrates how non-Western states and lawyers appropriated nineteenth-century classical thinking in order to defend new and better rules governing non-Western states' international relations. By internalizing the standard of civilization, for example, they argued for the abrogation of unequal treaties. These appropriations contributed to the globalization of international law. With the rise of modern legal thinking and a stronger international community governed by law, peripheral lawyers seized the opportunity and used the new discourse and institutions such as the League of Nations to dissolve the standard of civilization and codify non-intervention and self-determination. These stories suggest that the history of our contemporary international legal order is not purely European; instead they suggest a history of a mestizo international law.

Eva Becker assesses the US financial crisis as a crisis of regulatory data, information and knowledge. Based on the Financial Crisis Inquiry Commission's interviews as well her own interviews, and drawing on Capture Theory and recent reformulations thereof, she develops "knowledge capture" as a theoretic framework to assess financial regulation under conditions of 21st century complexity.

Knowledge Capture in Financial Regulation

A diverse array of factors may influence both earnings and consumption; however, this work primarily focuses on the impact of investments in human capital upon an individual's potential earnings and psychic income. For this study, investments in human capital include such factors as educational level, on-the-job skills training, health care, migration, and consideration of issues regarding regional prices and income. Taking into account varying cultures and political regimes, the research indicates that economic earnings tend to be positively correlated to education and skill level. Additionally, studies indicate an inverse correlation between education and unemployment. Presents a theoretical overview of the types of human capital and the impact of investment in human capital on earnings and rates of return. Then utilizes empirical data and research to analyze the theoretical issues related to investment in human capital, specifically formal education. Considered are such issues as costs and returns of investments, and social and private gains of individuals. The research compares and contrasts these factors based upon both education and skill level. Areas of future research are identified, including further analysis of issues regarding social gains and differing levels of success across different regions and countries. (AKP).

Since its establishment in the 1950s the American Economic Association's Committee on Economic Education has sought to promote improved instruction in economics and to facilitate this objective by stimulating research on the teaching of economics. These efforts are most apparent in the sessions on economic education that the Committee organizes at the Association's annual meetings. At these sessions economists interested in economic education have opportunities to present new ideas on teaching and research and also to report the findings of their research. The record of this activity can be found in the Proceedings of the American Economic Review. The Committee on Economic Education and its members have been actively involved in a variety of other projects. In the early 1960s it organized the National Task Force on Economic Education that spurred the development of economics teaching at the precollege level. This in turn led to the development of a standardized research instrument, a high school test of economic understanding. This was followed later in the 1960s by the preparation of a similar test of understanding college economics. The development of these two instruments greatly facilitated research on the impact of economics instruction, opened the way for application of increasingly sophisticated statistical methods in measuring the impact of economic education, and initiated a steady stream of research papers on a subject that previously had not been explored.

'It made me rethink the roots of our deepest fears and insecurities, and why we often disappoint ourselves in how we manifest them' Bill Clinton, Guardian Winner of the Pulitzer Prize in 1974 and the culmination of a life's work, *The Denial of Death* is Ernest Becker's brilliant and impassioned answer to the 'why' of human existence. In bold contrast to the predominant Freudian school of thought, Becker tackles the problem of the vital lie - man's refusal to acknowledge his own mortality. The book argues that human civilisation is a defence against the knowledge that we are mortal beings. Becker states that humans live in both the physical world and a symbolic world of meaning, which is where our 'immortality project' resides. We create in order to become immortal - to become part of something we believe will last forever. In this way we hope to give our lives meaning. In *The Denial of Death*, Becker sheds new light on the nature of humanity and issues a call to life and its living that still resonates decades after it was written.

Ernest Becker (1924-1974) was an astute observer of society and human behavior during America's turbulent 1960s and 1970s. Trained in social anthropology and driven by a transcending curiosity about human motivations, Becker doggedly pursued his basic research question, "What makes people act the way they do?" Dissatisfied with what he saw as narrowly fragmented methods in the contemporary social sciences and impelled by a belief that humankind more than ever needed a disciplined, rational, and empirically based understanding of itself, Becker slowly created a powerful interdisciplinary vision of the human sciences, one in which each discipline is rooted in a basic truth concerning the human condition. That truth became an integral part of Becker's emerging social science. Almost inadvertently, he outlined a perspective on human motivations that is perhaps the most broadly interdisciplinary to date. His perspective traverses not only the biological, psychological, and social sciences but also the humanities and educational, political, and religious studies. Ernest Becker is best known for the books written in the last few years before his death from cancer, including the highly praised Pulitzer Prize-winning volume *The Denial of Death* (1974) and *Escape from Evil* (1975). These late works, however, were built on a distinguished body of earlier books, essays, and reviews. The power and strength of Becker's ideas are fully present in his early works, which underlie his later contributions and give direction for interpreting the development of his ideas. Although Ernest Becker's life and career were cut short, his major writings have remained continually in print and have captured the interest of subsequent generations of readers. The Ernest Becker Reader makes available for the first time in one volume much of Becker's early work and thus places his later work in proper context. It is a major contribution to the ongoing interest in Becker's ideas.

This second edition of Gary S. Becker's *The Economics of Discrimination* has been expanded to include three further discussions of the problem and an entirely new introduction which considers the contributions made by others in recent years and some of the more important problems remaining. Mr. Becker's work confronts the economic effects of discrimination in the market place because of race, religion, sex, color, social class, personality, or other non-pecuniary considerations. He demonstrates that discrimination in the market place by any group reduces their own real incomes as well as those of the minority. The original edition of *The Economics of Discrimination* was warmly received by economists, sociologists, and psychologists alike for focusing the discerning eye of economic analysis upon a vital social problem—discrimination in the market place. "This is an unusual book; not only is it filled with ingenious theorizing but the implications of the theory are boldly confronted with facts. . . . The intimate relation of the theory and observation has resulted in a book of great vitality on a subject whose interest and importance are obvious."—M.W. Reder, *American Economic Review* "The author's solution to the problem of measuring the motive behind actual discrimination is something of a tour de force. . . . Sociologists in the field of race relations will wish to read this book."—Karl Schuessler, *American Sociological Review*

This book examines the most frequent form of Jew-hatred: Israel-related antisemitism. After defining this hate ideology in its various manifestations and the role the internet plays in it, the author explores the question of how Israel-related antisemitism is communicated and understood through the language used by readers in below-the-line comments. Drawing on a corpus of over 6,000 comments from traditionally left-wing news outlets *The Guardian* and *Die Zeit*, the author examines both implicit and explicit comparisons made between modern-day Israel and both colonial Britain and Nazi Germany. His analyses are placed within the context of resurgent neo-nationalism in both countries, and it is

argued that these instances of antisemitism perform a multi-faceted role in absolving guilt, re-writing history, and reinforcing in-group status. This book will be of interest not only to linguistics scholars, but also to academics in fields such as internet studies, Jewish studies, hate speech and antisemitism.

The second edition of this innovative work again provides a unique perspective on the clinical discovery process by providing input from experts within the NIH on the principles and practice of clinical research. Molecular medicine, genomics, and proteomics have opened vast opportunities for translation of basic science observations to the bedside through clinical research. As an introductory reference it gives clinical investigators in all fields an awareness of the tools required to ensure research protocols are well designed and comply with the rigorous regulatory requirements necessary to maximize the safety of research subjects. Complete with sections on the history of clinical research and ethics, copious figures and charts, and sample documents it serves as an excellent companion text for any course on clinical research and as a must-have reference for seasoned researchers. *Incorporates new chapters on Managing Conflicts of Interest in Human Subjects Research, Clinical Research from the Patient's Perspective, The Clinical Researcher and the Media, Data Management in Clinical Research, Evaluation of a Protocol Budget, Clinical Research from the Industry Perspective, and Genetics in Clinical Research *Addresses the vast opportunities for translation of basic science observations to the bedside through clinical research *Delves into data management and addresses how to collect data and use it for discovery *Contains valuable, up-to-date information on how to obtain funding from the federal government

Principles and Practice of Clinical Research

The first half of the twentieth century witnessed a growing interest in America's folk heritage, as Americans began to enthusiastically collect, present, market, and consume the nation's folk traditions. Examining one of this century's most prominent "folk revivals--the reemergence of Southern Appalachian handicraft traditions in the 1930s--Jane Becker unravels the cultural politics that bound together a complex network of producers, reformers, government officials, industries, museums, urban markets, and consumers, all of whom helped to redefine Appalachian craft production in the context of a national cultural identity. Becker uses this craft revival as a way of exploring the construction of the cultural categories "folk" and "tradition." She also addresses the consequences such labels have had on the people to whom they have been assigned. Though the revival of domestic arts in the Southern Appalachians reflected an attempt to aid the people of an impoverished region, she says, as well as a desire to recapture an important part of the nation's folk heritage, in reality the new craft production owed less to tradition than to middle-class tastes and consumer culture--forces that obscured the techniques used by mountain laborers and the conditions in which they worked.
