Recall: Create a binding manually Creating a manual binding to a native library is a process which builds in complexity as the native library gets larger

What is Objective Sharpie? Objective Sharpie is a command line tool used to parse Objective-C header files (*.h) to map the API into an editable binding definition

How definition files are used At compile time the definition files are combined with the native library, and an optional Extras file to create the binding dll

Download Objective Sharpie Objective Sharpie is a separate downloadable component that run on macOS and requires several additional tools to be installed

Objective Sharpie tools There are three Objective Sharpie commands used to create bindings

Three project styles Objective Sharpie supports three project types you can create bindings from

Three steps to bind an Xcode project There are three steps to produce the binding definition files for an Xcode project

Binding CocoaPods with Objective Sharpie Objective Sharpie supports binding CocoaPods and allows you to download, configure, and build your binding definition files in two steps

Manual binding with Objective Sharpie You can take control over the binding process with Objective Sharpie

Provide project-specific parameters The objective Sharpie bind command controls project parameters in the binding process

The scope argument The - scope argument defines the path used to search for header files

Properties - GCC Exception Handling GCC Exception Handling ensures we are able to support stack unwinding
