trypanosomiasis - trypanosomiasis by eurody 3,568 views 3 years ago 56 minutes - tropical medicine,.

Pathology When the trypanosome infects man through an infective bite from a tsetse fly They multiply in the tissues spaces at the site of the bite. There is a local inflammatory response with oedema and mononuclear infiltration • The trypanosomes then spread to the lymphatics, lymphglands and blood stream.

Blood specimen: To isolate trypanosomes in the blood and lymphatic system . Cerebral spinal fluid may be collected to isolate the trypanosomes . Serological tests. ELISA tests • BIIT - Blood incubation Infectivity Test - inoculate mouse w/ patient blood

To reduce anxiety • To prevent injury and further complications • To monitor side effects of drugs To improve the nutrition status of the client
