Holt McDougal Biology

Enger/Ross/Bailey: "Concepts in Biology" is a relatively brief introductory general biology text written for students with no previous science background. The authors strive to use the most accessible vocabulary and writing style possible while still maintaining scientific accuracy. The text covers all the main areas of study in biology from cells through ecosystems. Evolution and ecology coverage are combined in Part Four to emphasize the relationship between these two main subject areas. The new, 12th edition is the latest and most exciting revision of a respected introductory biology text written by authors who know how to reach students through engaging writing, interesting issues and applications, and accessible level. Instructors will appreciate the book's scientific accuracy, complete coverage and extensive supplement package.

Study Guide to Biology, Fifth Edition

For hundreds of years, the human response to personal and collective catastrophe has been recognized. Major historical events of the twentieth century have highlighted the reality of the human response to extreme traumatization, especially the experience of persons exposed to the concentration camps of Nazi Germany, the dropping of atomic bombs on Hiroshima and Nagasaki, and the unique features of the Vietnam conflict. However, it was not until 1980, with the publication of the third edition of the Diagnostic and Statistical Manual (DSM-111), that post-traumatic stress disorder (PTSD) was fully recognized as a distinct and valid diagnostic category with a permanency not hitherto afforded post-trauma stress syndromes. Consequently, a formidable PTSD literature has emerged since the late 1970s. Included among the wealth of research and clinical papers are a variety of edited books containing contributions from the major authorities in the field (e.g., Figley, 1978, 1985; van der Kolk, 1984; Kelly, 1985; Sonnenberg, Blank, & Talbott, 1985; Milgram, 1986; Ochberg, 1988). However, to date no publication has brought together and integrated the variety of theoretical and therapeutic perspectives in a form readily accessible to clinicians. It is to this gap in the literature that this contribution is addressed.
