Microbiology with Diseases by Taxonomy

"The three authors of this edition-Denise Anderson, Sarah Salm, and Deborah Allen-may be a set of individuals with different insights and unique experiences, but their cooperative relationship defines the word "team." What drives them is a single shared goal: to create the most learning-friendly introductory microbiology textbook available. Each author carefully read all the chapters, looking for parts that could be tweaked for clarity. They did this with students in mind, suggesting simpler words where appropriate while maintaining the scientific rigor so important for today's healthcare professionals. Meanwhile, Gene Nester continued to serve as "team member emeritus," keeping an eagle eye out for updates that could be incorporated into the text. His work established the text's reputation for excellence over the decades, and it lives on in this edition"--

Microbiology

Perfect for the non-major/allied health student (and also appropriate for mixed majors courses), this text provides a rock solid foundation in microbiology. It has a concise and readable style, covers the most current concepts, and gives students the knowledge and mastery necessary to understand advances of the future. By carefully and clearly explaining the fundamental concepts, using a body systems approach in the coverage of disease, and offering vivid and appealing instructional art, Microbiology: A Human Perspective draws students back to their book again and again!

Test Bank to Accompany the Microbial Universe

Appropriate for the non-major/allied health student, this authoritative text carefully explains the fundamentals of microbiology, providing a general overview of the principles followed by more detailed explanations. With its clear and concise writing style, Microbiology: A Human Perspective offers modern

coverage on such topics as genomics, biofilms, and quorum sensing. A body systems approach is used in the coverage of diseases.

Student Study Guide to Accompany Microbiology

Book of test questions to accompany Human Biology.

Microbiology : a Human Perspective

"Microbiology covers the scope and sequence requirements for a single-semester microbiology course for non-majors. The book presents the core concepts of microbiology with a focus on applications for careers in allied health. The pedagogical features of the text make the material interesting and accessible while maintaining the career-application focus and scientific rigor inherent in the subject matter. Microbiology's art program enhances students' understanding of concepts through clear and effective illustrations, diagrams, and photographs. Microbiology is produced through a collaborative publishing agreement between OpenStax and the American Society for Microbiology Press. The book aligns with the curriculum guidelines of the American Society for Microbiology."--BC Campus website.

Nester's Microbiology

Marketing Strategy, 8e is a focused, succinct text which can be used on its own or packaged with a case book. It covers the concepts and theories of creating and implementing a marketing strategy and offers a focus on the strategic planning process and marketing's cross/inter-functional relationships. This text distinguishes itself from competitors by maintaining a strong approach to strategic decision making. The eighth edition helps students integrate what they have learned about analytical tools and the 4P's of marketing within a broader framework of competitive strategy. Four key and relevant trends that are sweeping the world of marketing theory and practice are integrated throughout this new edition.

Microbiology

The author team of Prescott's Microbiology continues the tradition of past editions by providing a balanced, comprehensive introduction to all major areas of microbiology. Because of this balance, Microbiology is appropriate for microbiology majors and mixed majors courses. The new authors have focused on readability, artwork, and the integration of several key themes (including evolution, ecology and diversity) throughout the text, making an already superior text even better. Users who purchase Connect Plus receive access to the full online ebook version of the textbook.

Microbiology

This text was written in response to the need for a community health nursing textbook that reflects the practice of community health nursing in Canada. It is not an adaptation of a US text, but a fully Canadian textbook designed to match the way in which the course is offered in Canada. As a result, the first edition of this text was widely adopted across Canada and has been praised for its writing style, Canadian content, and thorough coverage of the key topic areas in community health nursing. The field of community health nursing is constantly changing. As a result, this second edition has been thoroughly revised with extensive updates, new content, statistics, Canadian research, and a new two-colour design.

Nester's Microbiology

The textbook was compiled in accordance with officially approved teaching programs for microbiology, virology and immunology in all faculties of higher medical schools. Questions of general microbiology (basic methods of studying microorganisms, morphology, structure and classification of bacteria, their physiology, the influence of physical, chemical and biological factors on microorganisms, microbial genetics and biotechnology, antimicrobials and the concept of infection) and special microbiology (morphology, physiology, pathogenic properties of pathogens of many infectious diseases, modern methods of their diagnostics, specific prevention and therapy). The textbook also contains sections on virology, protozoology, mycology and helminthology, which examine the basic biological properties of the causative agents and the diseases they cause. A significant part of the textbook is devoted to questions of immunology (nonspecific resistance of the organism, the doctrine of antigens, the immune system of the body, immune response, immunity reactions, allergy and other types of immune responses, immunodiagnostics and immunocorrection, immunoprophylaxis and immunotherapy). The

textbook contains sections on clinical and sanitary microbiology, examines the ecology of microorganisms, the normal microbiota of the human body and the effect of microorganisms on the fetus. Separate sections are devoted to the microbiota of the oral cavity and microbiological research in stomatological and pharmaceutical fields. The textbook is intended for students of medical universities, relevant departments of higher education of doctors, interns and microbiologists of all specialties.
