

On Having An Own Child Reproductive Technologies And The Cultural Construction Of Childhood

[#reproductive technologies](#) [#cultural construction of childhood](#) [#fertility treatments](#) [#having a child](#) [#childhood studies](#)

Explore the profound impact of reproductive technologies on the personal journey of having an own child. This discussion delves into how advancements in fertility treatments not only reshape family structures but also influence the cultural construction of childhood, challenging traditional perceptions and fostering new dialogues about parenting and societal roles.

We curate authentic academic textbooks from trusted publishers to support lifelong learning and research.

We appreciate your visit to our website.

The document Reproductive Technologies Childhood is available for download right away.

There are no fees, as we want to share it freely.

Authenticity is our top priority.

Every document is reviewed to ensure it is original.

This guarantees that you receive trusted resources.

We hope this document supports your work or study.

On Having an Own Child

How are ideas of genetics, 'blood', the family, and relatedness created and consumed? This is the first book ever to consider in depth why people want children, and specifically why people want children produced by reproductive technologies (such as IVF, ICSI etc). As the book demonstrates, even books ostensibly devoted to the topic of why people want children and the reasons for using reproductive technologies tend to start with the assumption that this is either simply a biological drive to reproduce, or a socially instilled desire. This book uses psychoanalysis not to provide an answer in its own right, but as an analytic tool to probe more deeply the problems of these assumptions. The idea that reproductive technologies simply supply an 'own' child is questioned in this volume in terms of asking how and why reproductive technologies are seen to create this 'ownness'. Given that it is the idea of an 'own' child that underpins and justifies the whole use of reproductive technologies, this book is a crucial and wholly original intervention in this complex and highly topical area.

This is the first book ever to consider in depth why people want children, and specifically why people want children produced by reproductive technologies (such as IVF, ICSI etc). As the book demonstrates, even books ostensibly devoted to the topic of why people want children and the reasons for using reproductive technologies tend to start with the assumption that this is either simply a biological drive to reproduce, or a socially instilled desire. This book uses psychoanalysis not to provide an answer in its own right, but as an analytic tool to probe more deeply the problems of these assumptions. The idea that reproductive technologies simply supply an 'own' child is questioned in this volume in terms of asking how and why reproductive technologies are seen to create this 'ownness'. Given that it is the idea of an 'own' child

that underpins and justifies the whole use of reproductive technologies, this book is a crucial and wholly original intervention in this complex and highly topical area.

Children in Culture, Revisited

Children in Culture, Revisited follows on from the first volume, *Children in Culture*, and is composed of a range of chapters, newly written for this collection, which offer further fully inter- and multidisciplinary considerations of childhood as a culturally and historically constructed identity rather than a constant psycho-biological entity.

A Child of One's Own

A fascinating study examining the diversities and novelties of contemporary parenthood in the light of a range of literary and philosophical works ranging from Greek tragedies to contemporary psychoanalytic theory by way of diverse writers from the eighteenth, nineteenth, and twentieth centuries.

The Female Body in Medicine and Literature

Drawing on a range of texts from the seventeenth century to the present, *The Female Body in Medicine and Literature* explores accounts of motherhood, fertility, and clinical procedures for what they have to tell us about the development of women's medicine. The essays here offer nuanced historical analyses of subjects that have received little critical attention, including the relationship between gynecology and psychology and the influence of popular art forms on so-called women's science prior to the twenty-first century. Taken together, these essays offer a wealth of insight into the medical treatment of women and will appeal to scholars in gender studies, literature, and the history of medicine.

Assisted Reproduction

Assisted reproductive technology (ART) allows people who are infertile the opportunity to conceive children and form much desired families. Over the past few decades, the number of ART procedures conducted in the United States has steadily increased, in part affected by the growing number of women trying to conceive later in their reproductive lives. This demographic shift in baby making has widened to include a variety of other people who experience social infertility, from single persons to same-sex couples. Media exposure and political attention to the use of ART have aroused public concern and controversy. In *Assisted Reproduction*, Alexandra E. Sigillo and Monica K. Miller explore how media, personal differences, societal influences, and psychological processes shape community sentiment toward ART and ART-related laws and policies. This book is recommended for students and scholars of psychology, sociology, gender and women's studies, communication studies, public health, and legal studies.

Society and Social Changes through the Prism of Childhood

This book presents a new childhood studies research program; namely Childhood Prism Research and offers unique childhood research contributions to the wider scholarly field. Bringing together cutting-edge childhood studies scholars from various disciplines, including philosophy, psychology, feminism, anthropology, sociology and literature, the book demonstrates the rich potential of this program and offers an introduction to the childhood prism theoretical framework, as well as examples of childhood prism research. Childhood prism research is underpinned by a distinct childhood studies approach that involves re-thinking the generational order perspective, and combining this with a relational ontology and a flat, non-adultist epistemology. The key assumption is that the study of children's lives can offer not only insights into adults' lives, and vice versa, but in some cases may even offer a privileged lens onto broader societal issues. The program embraces a number of seemingly oppositional positions in an ongoing debate within childhood studies and children's geographies about how to reinvigorate theoretical thinking within these fields. Featuring leading childhood studies scholars from various disciplines, including philosophy, psychology, feminism, anthropology, sociology and literature, this book demonstrates the rich potential of the program and shows how researching children's and young people's lives using this approach holds great promise for significant theoretical development beyond the field of children's geographies and childhood studies, as well as for empirical exploration of broader societal issues. *Society and Social Changes Through the Prism of Childhood* will be a key resource for academics, researchers, and advanced students of Childhood Studies, Sociology,

Human Geography, Social Sciences and Psychology. The chapters included in this book were originally published as a special issue of *Children's Geographies*.

Deconstructing Developmental Psychology

In this completely revised and updated edition, *Deconstructing Developmental Psychology* interrogates the assumptions and practices surrounding the psychology of child development, providing a critical evaluation of the role and contribution of developmental psychology within social practice. Since the second edition was published, there have been many major changes. This book addresses how shifts in advanced capitalism have produced new understandings of children, and a new (and more punitive) range of institutional responses to children. It engages with the paradoxes of childhood in an era when young adults are increasingly economically dependent on their families, and in a political context of heightened insecurity. The new edition includes an updated review of developments in psychological theory (in attachment, evolutionary psychology, theory of mind, cultural-historical approaches), as well as updating and reflecting upon the changed focus on fathers and fathering. It offers new perspectives on the connections between Piaget and Vygotsky and now connects much more closely with discussions from the sociology of childhood and critical educational research. Coverage has been expanded to include more material on child rights debates, and a new chapter addresses practice dilemmas around child protection, which engages even more with the "raced" and gendered effects of current policies involving children. This engaging and accessible text provides key resources to inform better professional practice in social work, education and health contexts. It offers critical insights into the politics and procedures that have shaped developmental psychological knowledge. It will be essential reading for anyone working with children, or concerned with policies around children and families. It was also of interest to students at undergraduate and postgraduate levels across a range of professional and practitioner groups, as well as parents and policy makers.

The Obligated Self

Mara H. Benjamin contends that the physical and psychological work of caring for children presents theologically fruitful but largely unexplored terrain for feminists. Attending to the constant, concrete, and urgent needs of children, she argues, necessitates engaging with profound questions concerning the responsible use of power in unequal relationships, the transformative influence of love, human fragility and vulnerability, and the embeddedness of self in relationships and obligations. Viewing child-rearing as an embodied practice, Benjamin's theological reflection invites a profound reengagement with Jewish sources from the Talmud to modern Jewish philosophy. Her contemporary feminist stance forges a convergence between Jewish theological anthropology and the demands of parental caregiving.

Making modern mothers

What does motherhood mean today? Drawing on interviews with new mothers and intergenerational chains of women in the same family, this exciting and timely book documents the transition to motherhood over generations and time. Exploring, amongst other things, the trend to later motherhood and the experience of teenage pregnancy, a compelling picture emerges. Becoming a mother is not only a profound moment of identity change but also a site of socio-economic difference that shapes women's lives.

Birth Rights and Wrongs

Introduction -- Basic civil rights -- Missing protections -- Litigation's limits -- Elusive injuries -- Courthouse claims -- Damage awards -- Procreation deprived -- Procreation imposed -- Procreation confounded -- Fraught remedies -- Conclusion.

After Legal Equality

Groups seeking legal equality often take a victory as the end of the line. Once judgment is granted or a law is passed, coalitions disband and life goes on in a new state of equality. Policy makers too may assume that a troublesome file is now closed. This collection arises from the urgent sense that law reforms driven by equality call for fresh lines of inquiry. In unintended ways, reforms may harm their intended beneficiaries. They may also worsen the disadvantage of other groups. Committed to tackling these important issues beyond the boundaries that often confine legal scholarship, this book pursues an interdisciplinary consideration of efforts to advance equality, as it explores the developments,

challenges, and consequences that arise from law reforms aiming to deliver equality in the areas of sexuality, kinship, and family relations. With an international array of contributors, *After Legal Equality: Family, Sex, Kinship* will be an invaluable resource for those with interests in this area.

Freezing Fertility

Analyzes how the possibility of egg freezing changes what it means to be fertile and to age in the 21st century. Welcomed as liberation and dismissed as exploitation, egg freezing (oocyte cryopreservation) has rapidly become one of the most widely-discussed and influential new reproductive technologies of this century. In *Freezing Fertility*, Lucy van de Wiel takes us inside the world of fertility preservation—with its egg freezing parties, contested age limits, proactive anticipations and equity investments—and shows how the popularization of egg freezing has profound consequences for the way in which female fertility and reproductive aging are understood, commercialized and politicized. Beyond an individual reproductive choice for people who may want to have children later in life, *Freezing Fertility* explores how the rise of egg freezing also reveals broader cultural, political and economic negotiations about reproductive politics, gender inequities, age normativities and the financialization of healthcare. Van de Wiel investigates these issues by analyzing a wide range of sources—varying from sparkly online platforms to heart-breaking court cases and intimate autobiographical accounts—that are emblematic of each stage of the egg freezing procedure. By following the egg's journey, *Freezing Fertility* examines how contemporary egg freezing practices both reflect broader social, regulatory and economic power asymmetries and repoliticize fertility and aging in ways that affect the public at large. In doing so, the book explores how the possibility of egg freezing shifts our relation to the beginning and end of life.

Critical Kinship Studies

This book draws together research on posthumanism and studies of kinship to elaborate an account of western human kinship practices. Studies of kinship have increasingly sought to critique the normative assumptions that often underpin how caring relationships between humans are understood. The categorisation of 'human' and 'kinship' is brought into question and this book examines who might be excluded through adherence to accepted categories and how a critical lens may broaden our understanding of caring relationships. Bringing together a diverse array of analytic foci and theoretical lenses, *Critical Kinship Studies* opens up new avenues for understanding what it means to be in relationships with others, and in so doing challenges the human exceptionalism that has often limited how we think about family, loss, love and subjectivity.

Precarities of 21st Century Childhoods

This interdisciplinary collection of essays explores internal and external precarities in the lives of children. The goal of the book is to illuminate, promote, and help situate subjectivities that are often blotted out for both the child and society.

Resistant Reproductions

Resistant Reproductions asks why narratives of pregnancy and abortion emerged in the early twentieth century and what kinds of stories these narratives conveyed. Is it only once pregnancy becomes plannable that it becomes a story worth telling? Abortion is often considered resistant and feminist, while pregnancy is considered domestic and conventional. How can readings of literary narratives challenge this reductive binary? *Resistant Reproductions*, the first book-length study of both pregnancy and abortion in British culture, addresses these questions by examining pregnancy narratives, including abortion narratives, in British fiction and film from 1907 to 1967. Fiction became a way for writers to explore what new possibilities of reproductive control would mean for the individual, yet there was also much anxiety about who would have control: individuals or the state. While exploring intimate personal experiences of pregnancy and abortion, *Resistant Reproductions* also asks how literary narratives used reproductive plots to address political issues of gender, class, and eugenics.

Diverse Spaces of Childhood and Youth

Diverse Spaces of Childhood and Youth focuses on the diverse spaces and discourses of children and youth globally. The chapters explore the influence of gender, age and other socio-cultural differences, such as race, ethnicity and migration trajectories, on the everyday lives of children and youth in a range of international contexts. These include the diverse urban environments of Istanbul, Copenhagen,

Helsinki, Toronto, London, and Bratislava and the contrasting rural settings of Ghana and England. The analyses of children's, young people's, parents' and professionals' experiences and discourses provide critical insights into how gender and other socio-cultural differences intersect. The importance of everyday practices and performances in the formation of children's and young people's identities is revealed, through for example, friendships and everyday sociality, mobilities and movements across space in both rural and urban environments. The volume shows how discourses of childhood, particularly those associated with risk, intersect with difference. The recognition of young people's agency and participation is central to many of the chapters, whilst also raising methodological questions about how discourses of childhood and youth are researched. Overall, the book provides an original contribution to geographies of children, youth and families and research on diversity and difference in global contexts. This book was published as a special issue of *Children's Geographies*.

The Theorist's Mother

Andrew Parker undertakes a critical reconsideration of the frequently absent, or troubled, figure of the mother in theorists including Marx, Freud, Lacan, and Derrida.

Rethinking Disability Theory and Practice

Drawing from work in a wide range of fields, this book presents novel approaches to key debates in thinking about and defining disability. Differing from other works in Critical Disability Studies, it crucially demonstrates the consequences of radically rethinking the roles of language and perspective in constructing identities.

The SAGE Encyclopedia of Children and Childhood Studies

The SAGE Encyclopedia of Children and Childhood Studies navigates our understanding of the historical, political, social and cultural dimensions of childhood. Transdisciplinary and transnational in content and scope, the Encyclopedia both reflects and enables the wide range of approaches, fields and understandings that have been brought to bear on the ever-transforming problem of the "child" over the last four decades. This four-volume encyclopedia covers a wide range of themes and topics, including: Social Constructions of Childhood Children's Rights Politics/Representations/Geographies Child-specific Research Methods Histories of Childhood/Transnational Childhoods Sociology/Anthropology of Childhood Theories and Theorists Key Concepts. This interdisciplinary encyclopedia will be of interest to students and researchers in: Childhood Studies Sociology/Anthropology Psychology/Education Social Welfare Cultural Studies/Gender Studies/Disability Studies.

Conceiving Contemporary Parenthood

With the global expansion of reproductive technologies, there are ever more ways to create a family, and more family types than ever before. This book explores the experiences of those persons - whether single, in a couple, or part of collective co-parenting arrangements; whether hetero- or homosexual; whether cis- or transgender - who are creating what has been termed 'new family forms' with reproductive 'assistance'. Drawing on qualitative research from around the world, the book is particularly anchored in two bodies of social science scholarship - sociological and anthropological inquiries into the cultural impact of reproductive technologies on the one hand, and parenting culture studies on the other. It seeks to create fertile conversations between these scholarships, highlighting the intersections in the ways we think about conceiving and caring for children in today's 'reproductive landscape'. Focusing specifically on persons whose reproductive journeys do not conform to dominant scripts, the book traces the many ways in which intentions, expectations and technological developments contribute to changing and enduring conceptions of good parenthood in the twenty-first century. Taking a holistic perspective, the book presents deep insights into the experiences not only of (intending) parents, but also of donors, surrogates, medical professionals and activists. The collection will be of interest to an international readership of scholars of gender, reproduction, parenting and family life. The chapters in this book were originally published as a special issue of *Anthropology & Medicine*.

Cultural Conceptions

Examines the meaning of "life" in an era of emerging biotechnology. What happens to prevailing beliefs about the uniqueness of individual life when life can be cloned? Or to traditional understandings of family relationships when a child can have up to five parents? These are some of the questions addressed

by Valerie Hartouni in her consideration of the cultural effects of new reproductive technologies as reflected in video images, popular journalism, scientific debates, legal briefs, and policy decisions. In *Cultural Conceptions*, Hartouni tracks the circulation and communication of various myths, images, and stories pertaining to new reproductive technologies and their effects, both imagined and real, during the past two decades. While addressing topics ranging from surrogacy and cloning to adoption, ultrasound imaging, and abortion, Hartouni looks to American popular culture for clues to what these new -- and not so new -- reproductive practices tell us about issues of personhood. Hartouni investigates the emergence of new anxieties about the nature of selfhood as well as the recurrence of age-old myths regarding individuality, sexuality, property, and family. She argues that both are being played out in cultural contests over the meaning and organization of women's reproductive capacity. In her discussion of provocative issues such as The Bell Curve controversy and the Baby M. case, Hartouni traces the dialectic of crisis and containment unleashed by reproductive technologies. Ultimately, however, *Cultural Conceptions* argues that the anxieties that surround new reproductive technologies provide openings for alternative understandings and practices of life to emerge and challenge those currently in place. A thoughtful, daring, and original look at this complex set of issues, *Cultural Conceptions* provides a much-needed guide to our nation's psyche as we approach the new millennium.

Reinventing Childhood Nostalgia

While Romantic-era concepts of childhood nostalgia have been understood as the desire to retrieve the ephemeral mindset of the child, this collection proposes that the emergence of digital media has altered this reflective gesture towards the past. No longer is childhood nostalgia reliant on individual memory. Rather, it is associated through contemporary convergence culture with the commodities of one's youth as they are recycled from one media platform to another. Essays in the volume's first section identify recurrent patterns in the recycling, adaptation, and remediation of children's toys and media, providing context for section two's exploration of childhood nostalgia in memorial practices. In these essays, the contributors suggest that childhood toys and media play a role in the construction of the imagined communities (Benedict Anderson) that define nations and nationalism. Eschewing the dichotomy between restorative and reflexive nostalgia, the essays in section three address the ethics of nostalgia in terms of child agency and depictions of childhood. In a departure from the notion that childhood nostalgia is the exclusive prerogative of narrative fiction, section four looks for its traces in the child sciences. Pushing against nostalgia's persistent associations with wishful thinking, false memories, and distortion, this collection suggests nostalgia is never categorically good or bad in itself, but owes its benefits or defects to the ways in which it is brought to bear on the representation of children and childhood.

Transdisciplinary Perspectives on Childhood in Contemporary Britain

In the light of the complex demographic shifts associated with late modernity and the impetus of neo-liberal politics, childhood continues all the more to operate as a repository for the articulation of diverse social and cultural anxieties. Since the Thatcher years, juvenile delinquency, child poverty, and protection have been persistent issues in public discourse. Simultaneously, childhood has advanced as a popular subject in the arts, as the wealth of current films and novels in this field indicates. Focusing on the late twentieth and the early twenty-first centuries, this collection assembles contributions concerned with current political, social, and cultural dimensions of childhood in the United Kingdom. The individual chapters, written by internationally renowned experts from the social sciences and the humanities, address a broad spectrum of contemporary childhood issues, including debates on child protection, school dress codes, the media, the representation and construction of children in audiovisual media, and literary awards for children's fiction. Appealing to a wide scholarly audience by joining perspectives from various disciplines, including art history, education, law, film and TV studies, sociology, and literary studies, this volume endorses a transdisciplinary and meta-theoretical approach to the study of childhood. It seeks to both illustrate and dismantle the various ways in which childhood has been implicitly and explicitly conceived in different disciplines in the wake of the constructivist paradigm shift in childhood studies.

The Palgrave Handbook of Disabled Children's Childhood Studies

Disabled children's lives have often been discussed through medical concepts of disability rather than concepts of childhood. Western understandings of childhood have defined disabled children against child development 'norms' and have provided the rationale for segregated or 'special' welfare and

education provision. In contrast, disabled children's childhood studies begins with the view that studies of children's impairment are not studies of their childhoods. Disabled children's childhood studies demands ethical research practices that position disabled children and young people at the centre of the inquiry outside of the shadow of perceived 'norms'. The Palgrave Handbook of Disabled Children's Childhood Studies will be of interest to students and scholars across a range of disciplines, as well as practitioners in health, education, social work and youth work.

Wild Child

Exploring how the figure of the "wild child" in contemporary fiction grapples with contemporary cultural anxieties about reproductive ethics and the future of humanity In the eighteenth century, Western philosophy positioned the figure of "the child" at the border between untamed nature and rational adulthood. Contemporary cultural anxieties about the ethics and politics of reproductive choice and the crisis of parental responsibility have freighted this liminal figure with new meaning in twenty-first-century narratives. In *Wild Child*, Naomi Morgenstern explores depictions of children and their adult caregivers in extreme situations—ranging from the violence of slavery and sexual captivity to accidental death, mass murder, torture, and global apocalypse—in such works as Toni Morrison's *A Mercy*, Cormac McCarthy's *The Road*, Lionel Shriver's *We Need to Talk about Kevin*, Emma Donoghue's *Room*, and Denis Villeneuve's film *Prisoners*. Morgenstern shows how, in such narratives, "wild" children function as symptoms of new ethical crises and existential fears raised by transformations in the technology and politics of reproduction and by increased ethical questions about the very decision to reproduce. In the face of an uncertain future that no longer confirms the confidence of patriarchal humanism, such narratives displace or project present-day apprehensions about maternal sacrifice and paternal protection onto the wildness of children in a series of hyperbolically violent scenes. Urgent and engaging, *Wild Child* offers the only extended consideration of how twenty-first-century fiction has begun to imagine the decision to reproduce and the ethical challenges of posthumanist parenting.

Developments

How does developmental psychology connect with (what used to be called) the developing world? What do cultural representations indicate about the contemporary politics of childhood? How is concern about child sexual exploitation linked to wider securitization anxieties? In other words: what is the political economy of childhood, and how is this affectively organized? This new edition of *Developments: Child, Image, Nation*, fully updated, is a key conceptual intervention and resource, reflecting further on the contexts and frameworks that tie children to national and international agendas. A companion volume to Burman's *Deconstructing Developmental Psychology* (third edition, 2017) this volume helps explain why questions around children and childhood, including their safety, welfare, their interests, abilities, sexualities and their violence, have so preoccupied the late twentieth and twenty-first centuries, showing how the frames for these concerns have extended beyond their Euro-US contexts of origination. In this completely revised edition, Burman explores changing debates and contexts, offering resources for interpreting continuities and shifts in the complex terrain connecting children and development. Through reflection on an increasingly globalised, marketised world, that prolongs previous colonial and gendered dynamics in new and even more insidious ways, *Developments* analyses the conceptual paradigms shaping how we think about and work with children, and recommends strategies for changing them. Drawing in particular on feminist and post-development literatures, as well as original and detailed engagement with social theory, it illustrates how and why reconceptualising notions of individual and human development, including those informing models of children's rights and interests, is needed to foster more just and equitable forms of professional practice with children and their families. Burman offers an important contribution to a set of urgent debates engaging theory and method, policy and practice across all the disciplines that work with, or lay claim to, children's interests. A persuasive set of arguments about childhood, culture and professional practice, *Developments* is an invaluable resource to teachers and students in psychology, childhood studies, and education as well as researchers in gender studies.

Relatedness in Assisted Reproduction

This multidisciplinary book addresses the nature and meaning of relationships and identity in assisted conception families.

Critical Disability Studies and the Disabled Child

This book examines the relationship between contemporary cultural representations of disabled children on the one hand, and disability as a personal experience of internalised oppression on the other. In focalising this debate through an exploration of the politically and emotionally charged figure of the disabled child, Harriet Cooper raises questions both about what it means to 'speak for' the other and about what resistance means when one is unknowingly invested in one's own abjection. Drawing on both the author's personal experience of growing up with a physical impairment and on a range of critical theories and cultural objects – from Frances Hodgson Burnett's novel *The Secret Garden* to Judith Butler's work on injurious speech – the book theorises the making of disabled and 'rehabilitated' subjectivities. With a conceptual framework informed by both psychoanalysis and critical disability studies, it investigates the ways in which cultural anxieties about disability come to be embodied and lived by the disabled child. Posing new questions for disability studies and for identity politics about the relationships between lived experiences, cultural representations and dominant discourses – and demonstrating a new approach to the concept of 'internalised oppression' – this book will be of interest to scholars and students of disability studies, medical humanities, sociology and psychosocial studies, as well as to those with an interest in identity politics more generally.

Bibliographic Index

Thirty-five years after its initial success as a form of technologically assisted human reproduction, and five million miracle babies later, in vitro fertilization (IVF) has become a routine procedure worldwide. In *Biological Relatives*, Sarah Franklin explores how the normalization of IVF has changed how both technology and biology are understood. Drawing on anthropology, feminist theory, and science studies, Franklin charts the evolution of IVF from an experimental research technique into a global technological platform used for a wide variety of applications, including genetic diagnosis, livestock breeding, cloning, and stem cell research. She contends that despite its ubiquity, IVF remains a highly paradoxical technology that confirms the relative and contingent nature of biology while creating new biological relatives. Using IVF as a lens, Franklin presents a bold and lucid thesis linking technologies of gender and sex to reproductive biomedicine, contemporary bioinnovation, and the future of kinship.

Biological Relatives

Children in Culture, Revisited follows on from the first volume, *Children in Culture*, and is composed of a range of chapters, newly written for this collection, which offer further fully inter- and multidisciplinary considerations of childhood as a culturally and historically constructed identity rather than a constant psycho-biological entity.

Children in Culture, Revisited

Innocence, Knowledge and the Construction of Childhood provides a critical examination of the way we regulate children's access to certain knowledge and explores how this regulation contributes to the construction of childhood, to children's vulnerability and to the constitution of the 'good' future citizen in developed countries. Through this controversial analysis, Kerry H. Robinson critically engages with the relationships between childhood, sexuality, innocence, moral panic, censorship and notions of citizenship. This book highlights how the strict regulation of children's knowledge, often in the name of protection or in the child's best interest, can ironically, increase children's prejudice around difference, increase their vulnerability to exploitation and abuse, and undermine their abilities to become competent adolescents and adults. Within her work Robinson draws upon empirical research to: provide an overview of the regulation and governance of children's access to 'difficult knowledge', particularly knowledge of sexuality explore and develop Foucault's work on the relationship between childhood and sexuality identify the impact of these discourses on adults' understanding of childhood, and the tension that exists between their own perceptions of sexual knowledge, and the perceptions of children reconceptualise children's education around sexuality. *Innocence, Knowledge and the Construction of Childhood* is essential reading for both undergraduate and postgraduate students undertaking courses in education, particularly with a focus on early childhood or primary teaching, as well as in other disciplines such as sociology, gender and sexuality studies, and cultural studies.

Innocence, Knowledge and the Construction of Childhood

This book explores the issues that surround medically assisted reproduction. It addresses the place of destiny, including how to think about individual destinies in an age of increasingly accessible gene sequencing paired with a growing link between procreation and prediction.

The Art of Making Children

In the first book to examine the industry of reproductive technology from the perspective of the consumer, Gay Becker scrutinizes the staggering array of medical options available to women and men with fertility problems and assesses the toll—both financial and emotional—that the quest for a biological child often exacts from would-be parents. Becker interviewed hundreds of people over a period of years; their stories are presented here in their own words. Absorbing, informative, and in many cases moving, these stories address deep-seated notions about gender, self-worth, and the cultural ideal of biological parenthood. Becker moves beyond people's personal experiences to examine contemporary meanings of technology and the role of consumption in modern life. What emerges is a clear view of technology as culture, with technology the template on which issues such as gender, nature, and the body are being rewritten and continuously altered. *The Elusive Embryo* chronicles the history and development of reproductive technology, and shows how global forces in consumer culture have contributed to the industry's growth. Becker examines how increasing use of reproductive technology has changed ideas about "natural" pregnancy and birth. Discussing topics such as in vitro fertilization, how men and women "naturalize" the use of a donor, and what happens when new reproductive technologies don't work, Becker shows how the experience of infertility has become increasingly politicized as potential parents confront the powerful forces that shape this industry. *The Elusive Embryo* is accessible, well written, and well documented. It will be an invaluable resource for people using or considering new reproductive technologies as well as for social scientists and health professionals.

The Elusive Embryo

Millions of children have been born in the United States with the help of cutting-edge reproductive technologies, much to the delight of their parents. But alarmingly, scarce attention has been paid to the lax regulations that have made the U.S. a major fertility tourism destination. And without clear protections, the unique rights and needs of the children of assisted reproduction are often ignored. This book is the first to consider the voice of the child in discussions about regulating the fertility industry. The controversies are many. Donor anonymity is preventing millions of children from knowing their genetic origins. Fertility clinics are marketing genetically enhanced babies. Career women are saving their eggs for later in life. And Third World women are renting their wombs to the rich. Meanwhile, the unregulated fertility market charges forward as a multi-billion-dollar industry. This deeply-considered book offers answers to the urgent question: Who will protect our babies of technology?

Babies of Technology

The word "mother" traditionally meant a woman who bears and nurtures a child. In recent decades, changes in social norms and public policy as well as advances in reproductive technologies and the development of markets for procreation and care have radically expanded definitions of motherhood. But while maternity has become a matter of choice for more women, the freedom to make reproductive decisions is unevenly distributed. Restrictive policies, socioeconomic disadvantages, cultural mores, and discrimination force some women into motherhood and prevent others from caring for their children. *Reassembling Motherhood* brings together contributors from across the disciplines to consider the transformation of motherhood as both an identity and a role. It examines how the processes of bearing and rearing a child are being restructured as reproductive labor and care work change around the globe. The authors examine issues such as artificial reproductive technologies, surrogacy, fetal ultrasounds, adoption, nonparental care, and the legal status of kinship, showing how complex chains of procreation and childcare have simultaneously generated greater liberty and new forms of constraint. Emphasizing the tension between the liberalization of procreation and care on the one hand, and the limits to their democratization due to race, class, and global inequality on the other, the book highlights debates that have emerged as these multifaceted changes have led to both the fragmentation and reassembling of motherhood.

The British National Bibliography

Since the first "test tube baby" was born over 40 years ago, In Vitro Fertilization and other Assisted Reproductive Technologies (ARTs) have advanced in extraordinary ways, producing millions of babies. An estimated 20% of American couples use infertility services to help them conceive, and that number is growing. Such technologies permit thousands of people, including gay and lesbian couples and single parents, to have offspring. Couples can now transmit or avoid passing on certain genes to their children, including those for chronic disease and, probably sometime soon, height and eye color as well. Prospective parents routinely choose even the sex of their future child and whether or not to have twins. The possibilities of this rapidly developing technology are astounding—especially in the United States, where the procedures are practically unregulated and a large commercial market for buying and selling human eggs is swiftly growing. New gene-editing technology, known as CRISPR, allows for even more direct manipulation of embryos' genes. As these possibilities are increasingly realized, potential parents, doctors, and policy-makers face complex and critical questions about the use—or possible misuse—of ARTs. *Designing Babies* confronts these questions, examining the ethical, social, and policy concerns surrounding reproductive technology. Based on in-depth interviews with providers and patients, Robert Klitzman explores how individuals and couples are facing quandaries of whether, when, and how to use ARTs. He articulates the full range of these crucial issues, from the economic pressures patients face to the moral and social challenges they encounter as they make decisions which will profoundly shape the life of their offspring. In doing so, he reveals the broader social and biological implications of controlling genetics, ultimately arguing for closer regulation of procedures which affect the lives of generations to come and the future of our species as a whole.

Reassembling Motherhood

You probably know the adult viewpoints on marriage, infertility, reproductive technologies, same-sex parenting, divorce, and adoption. But have you ever considered the kids' perspective? *Them Before Us* has flipped the script on adult-centric attitudes toward marriage, parenthood, and reproductive technologies by framing these issues around a child's right to be raised by both their mother and father. Set against a backdrop of sound research, the compelling stories throughout each chapter confirm that a child's mental, physical, and emotional well-being depends on being loved by the two people responsible for their existence. It's a paradigm shift that will impact the personal and the political, and reframe every marriage and family conversation across the globe. *Them Before Us* dispels many prevalent, harmful myths concerning children's rights, such as: • Kids need only love and safety—moms and dads are optional. • Love makes a family—biology is irrelevant. • Marriage is about adults—it has nothing to do with kids. • Children are resilient and will "get over" divorce. • Studies show "no difference" in outcomes for kids with same-sex parents. • Sperm and egg donor kids are fortunate because they are so wanted. • Surrogacy is a great way to help wannabe parents have a baby. • Reproductive technologies are just like adoption. Are you tired of a culture that views adults as victims in family matters, when it's clear that kids are the ones who truly pay the price? If so, we are your people, and this is your movement.

La importancia de las rutinas

Tabla de Rutinas Montessori

Los adultos aceptan cambios repentinos SIN NINGÚN problema.

Estos cambios pueden ser pequeños para UN adulto pero para UN NIÑO NO.

Para evitar lagrimas y confusión del NIÑO es importante mantener una rutina.

El adulto debe entender los cambios que pueden ser molestos para el NIÑO.

1. Fotografías del Niño realizando sus actividades diarias.

Gives advice to young babysitters on getting jobs, keeping a business going, and safe handling of babies and children.

Children's Business

Gives advice to young babysitters on getting jobs, keeping a business going, and safe handling of babies and children.

Be a Super Sitter

In the vein of his bestseller, *Four Arguments for the Elimination of Television*, nationally recognized social critic Jerry Mander researches, discusses, and exposes the momentous and unsolvable environmental and social problem of capitalism. Mander argues that capitalism is no longer a viable system: "What may have worked in 1900 is calamitous in 2010." Capitalism, utterly dependent on never-ending economic growth, is an impossible absurdity on a finite planet with limited resources. Climate change, together with global food, water, and resource shortages, are only the start. Mander draws attention to capitalism's obsessive need to dominate and undermine democracy, as well as to diminish social and economic equity. Designed to operate free of "morality," the system promotes "permanent war" as a key economic strategy. Worst of all, the problems of capitalism are intrinsic to the form. Many organizations are already anticipating the breakdown of the system and are working to define new hierarchies of democratic values that respect the carrying capacities of the planet.

Glamour

Part genealogy, part history, and part personal memoir, rooted in an amazing amount of research, and written with grace and flair, this book brings to light a rich past that had almost been lost. James M. McPherson, author of *Battle Cry of Freedom: The Civil War Era*

Bowker's Directory of Videocassettes for Children 1999

Content analysis is a complex research methodology. This book provides an accessible text for upper level undergraduates and graduate students, comprising step-by-step instructions and practical advice.

How to be a Super Sitter

This is the second volume in the series 'Trends in language acquisition research'. The unusual combination in one volume of reports on various different sign languages in acquisition makes this book quite unique.

The Elementary School Library Collection, Phases 1-2-3

'Pirate Nation' is the remarkable story of modern-day digital piracy, and how it affects business, society, creativity and culture, now and in the future. It traces the origins, methods and motivations of modern-day digital pirates, focusing not just on copyright law or file sharing music, but also game, movie, literary and software piracy.

Consumers Digest

Documents the story of twelve young American soldiers deployed to Iraq in the summer of 2006 who were assigned to guard Saddam Hussein in the months before his execution, a responsibility that raised life-changing questions about their beliefs and Hussein's character.

The Elementary School Library Collection

Now a major motion picture nominated for nine Academy Awards. Narrative of Solomon Northup, a Citizen of New-York, Kidnapped in Washington City in 1841, and Rescued in 1853. *Twelve Years a Slave* by Solomon Northup is a memoir of a black man who was born free in New York state but kidnapped, sold into slavery and kept in bondage for 12 years in Louisiana before the American Civil War. He provided details of slave markets in Washington, DC, as well as describing at length cotton cultivation on major plantations in Louisiana.

The Video Source Book

'This is a welcome book. The issues of public understanding of science open many questions. What does "understanding" mean? How does understanding translate into attitudes towards science and trust in scientists? What is the role of the mass media? The essays in this book shed light on such questions bringing insights from several disciplines. They help to define a meaningful research agenda for the future. - Professor Dorothy Nelkin, New York University

Science Books & Films

Rewind: Once upon a time in Ohio there lived an elderly recluse, 'the man from Primrose Lane'. He had no friends or family. He wore mittens all year round. And one summers day, he was murdered. Fast-Forward: Bestselling author David Neff is a broken man, lonely, desolate and lost ever since his wife's suicide. But something about the man from Primrose Lane grabs his attention and he decides to investigate the mystery - only to be dragged back into a world he thought he had left behind forever. Replay: As David gets closer to uncovering the true identity of the man from Primrose Lane, he begins to understand the terrible power of his own obsessions and how they may be connected to the deaths of both the hermit and his beloved wife.

The Elementary School Library Collection

From the industrial revolution to the railway age, through the era of electrification, the advent of mass production, and finally to the information age, the same pattern keeps repeating itself. An exciting, vibrant phase of innovation and financial speculation is followed by a crash, after which begins a longer, more stately period during which the technology is actually deployed properly. This collection of surveys and articles from The Economist examines how far technology has come and where it is heading. Part one looks at topics such as the "greying" (maturing) of IT, the growing importance of security, the rise of outsourcing, and the challenge of complexity, all of which have more to do with implementation than innovation. Part two looks at the shift from corporate computing towards consumer technology, whereby new technologies now appear first in consumer gadgets such as mobile phones. Topics covered will include the emergence of the mobile phone as the "digital Swiss Army knife"; the rise of digital cameras, which now outsell film-based ones; the growing size and importance of the games industry and its ever-closer links with other more traditional parts of the entertainment industry; and the social impact of technologies such as text messaging, Wi-Fi, and camera phones. Part three considers which technology will lead the next great phase of technological disruption and focuses on biotechnology, energy technology, and nanotechnology.

Elementary School Library Collection

Number Games | 9/11 to Coronavirus was written for the purpose of educating the people of the world about the agendas that are being carried out against us, and the very clear plan that went into motion in 1968, when coronavirus was coined, World Trade Center construction in New York began, and 9-1-1 was made the United States' national emergency dialing code. As the reader will learn, these agendas, as well as many others that are related, have been executed by a numerical code, known as Gematria, and they are for the sake of building a surveillance state across the world, so that powerful interests can peer into and keep tabs on the lives of the masses, for the sake of continued power and control. Number Games | 9/11 to Coronavirus also names the parties responsible, with definitive evidence. To put it mildly, this is the type of book that the Vatican wishes was locked away in one of their vaults, but fortunately for the reader, it is not.

The Capitalism Papers

The creator of YouTube's ColdFusion explores the development of technology from Industrial Revolution to Artificial Intelligence to figure out what's next. As each new stage of technology builds on the last, advancements start to progress at an exponential rate. In order to know where we're headed, it's essential to know how we got here. What hidden stories lie behind the technology we use today? What drove the men and women who invented it? What were those special moments that changed the world forever? Dagogo Altraide explores these questions in a history of human innovation that reveals how new technologies influence each other, how our modern world came to be, and what future innovations might look like. From the electric world of Tesla and the steam engine revolution to the first computers,

the invention of the internet, and the rise of artificial intelligence, New Thinking tells the stories of the men and women who changed our world with the power of new thought.

If These Stones Could Talk

As Alan Rosenthal states in the preface to this new edition of his acclaimed resource for filmmakers, *Writing, Directing, and Producing Documentary Films and Videos* is “a book about storytelling—how to tell great and moving stories about fascinating people, whether they be villains or heroes.” In response to technological advances and the growth of the documentary hybrid in the past five years, Rosenthal reconsiders how one approaches documentary filmmaking in the twenty-first century. Simply and clearly, he explains how to tackle day-to-day problems, from initial concept through distribution. He demonstrates his ideas throughout the book with examples from key filmmakers’ work. New aspects of this fourth edition include a vital new chapter titled “Making Your First Film,” and a considerable enlargement of the section for producers, “Staying Alive,” which includes an extensive discussion of financing, marketing, festivals, and distribution. This new edition offers a revised chapter on nonlinear editing, more examples of precise and exacting proposals, and the addition of a complex budget example with explanation of the budgeting process. Discussion of documentary hybrids, with suggestions for mastering changes and challenges, has also been expanded, while the “Family Films” chapter includes updated information that addresses rapid expansion in this genre.

The Content Analysis Guidebook

One of the Best Health and Wellness Books of 2017 — *Sports Illustrated Deep Nutrition* cuts through today’s culture of conflicting nutritional ideologies, showing how the habits of our ancestors can help us lead longer, healthier, more vital lives. Physician and biochemist Catherine Shanahan, M.D. examined diets around the world known to help people live longer, healthier lives—diets like the Mediterranean, Okinawa, and “Blue Zone”—and identified the four common nutritional habits, developed over millennia, that unfailingly produce strong, healthy, intelligent children, and active, vital elders, generation after generation. These four nutritional strategies—fresh food, fermented and sprouted foods, meat cooked on the bone, and organ meats—form the basis of what Dr. Cate calls “The Human Diet.” Rooted in her experience as an elite athlete who used traditional foods to cure her own debilitating injuries, and combining her research with the latest discoveries in the field of epigenetics, Dr. Cate shows how all calories are not created equal; food is information that directs our cellular growth. Our family history does not determine our destiny: what you eat and how you live can alter your DNA in ways that affect your health and the health of your future children. *Deep Nutrition* offers a prescriptive plan for how anyone can begin eating The Human Diet to:

- *Improve mood
- *Eliminate cravings and the need to snack
- *Boost fertility and have healthier children
- *Sharpen cognition and memory
- *Eliminate allergies and disease
- *Build stronger bones and joints
- *Get younger, smoother skin

The books listed in this annotated bibliography, selected to provide pleasurable reading for high school students, are arranged alphabetically by author under 35 main categories: (1) adventure and adventurers; (2) animals; (3) art and architecture; (4) biography; (5) careers and people on the job; (6) cars and airplanes; (7) great books that are unusual; (8) drama; (9) ecology; (10) essays; (11) ethnic experiences; (12) fantasy; (13) history; (14) historical fiction; (15) hobbies and crafts; (16) horror, witchcraft, and the occult; (17) humor; (18) improving yourself; (19) languages; (20) love and romance; (21) music and musicians; (22) mystery and crime; (23) myths and legends; (24) philosophies and philosophers; (25) poetry and poets; (26) social and personal problems; (27) religion and religious leaders; (28) science and scientists; (29) science fiction; (30) short stories; (31) sports and sports figures; (32) television, movies, and entertainment; (33) wars, soldiers, spying, and spies; (34) westerns and people of the west; and (35) women. A directory of publishers and indexes of authors and titles conclude the book. (EL)

Pirate Nation

During that time he photographed all of the greatest personalities, at Metro-Goldwyn-Mayer, Warner Brothers, and Columbia as well as independently.

The Prisoner in His Palace

Transhumanism is a recent movement that extols man's right to shape his own evolution, by maximizing the use of scientific technologies, to enhance human physical and intellectual potential. While the name is new, the idea has long been a popular theme of science fiction, featured in such films as 2001: A Space Odyssey, Blade Runner, the Terminator series, and more recently, The Matrix, Limitless, Her and Transcendence. However, as its adherents hint at in their own publications, transhumanism is an occult project, rooted in Rosicrucianism and Freemasonry, and derived from the Kabbalah, which asserts that humanity is evolving intellectually, towards a point in time when man will become God. Modeled on the medieval legend of the Golem and Frankenstein, they believe man will be able to create life itself, in the form of living machines, or artificial intelligence. Spearheaded by the Cybernetics Group, the project resulted in both the development of the modern computer and MK-Ultra, the CIA's "mind-control" program. MK-Ultra promoted the "mind-expanding" potential of psychedelic drugs, to shape the counterculture of the 1960s, based on the notion that the shamans of ancient times used psychoactive substances, equated with the "apple" of the Tree of Knowledge. And, as revealed in the movie Lucy, through the use of "smart drugs," and what transhumanists call "mind uploading," man will be able to merge with the Internet, which is envisioned as the end-point of Kabbalistic evolution, the formation of a collective consciousness, or Global Brain. That awaited moment is what Ray Kurzweil, a director of engineering at Google, refers to as The Singularity. By accumulating the total of human knowledge, and providing access to every aspect of human activity, the Internet will supposedly achieve omniscience, becoming the "God" of occultism, or the Masonic All-Seeing Eye of the reverse side of the American dollar bill.

Twelve Years a Slave

Throughout the recent culture and science "wars," the radically new conceptions of knowledge and science emerging from such fields as the history and sociology of science have been denounced by various journalists, scientists, and academics as irresponsible attacks on science, absurd denials of objective reality, or a cynical abandonment of truth itself. In *Scandalous Knowledge*, Barbara Herrnstein Smith explores and illuminates the intellectual contexts of these crude denunciations. A preeminent scholar, theorist, and analyst of intellectual history, Smith begins by looking closely at the epistemological developments at issue. She presents a clear, historically informed, and philosophically sophisticated overview of important twentieth-century critiques of traditional--rationalist, realist, positivist--accounts of human knowledge and scientific truth, and discusses in detail the alternative accounts produced by Ludwik Fleck, Thomas Kuhn, Michel Foucault, Bruno Latour, and others. With keen wit, Smith demonstrates that the familiar charges involved in these scandals--including the recurrent invocation of "postmodern relativism"--protect intellectual orthodoxy by falsely associating important intellectual developments with logically absurd and morally or politically disabling positions. She goes on to offer bold, original, and insightful perspectives on the currently strained relations between the natural sciences and the humanities; on the grandiose but dubious claims of evolutionary psychology to explain human behavior, cognition, and culture; and on contemporary controversies over the psychology, biology, and ethics of animal-human relations. *Scandalous Knowledge* is a provocative and compelling intervention into controversies that continue to roil through journalism, pulpits, laboratories, and classrooms throughout the United States and Europe.

Between Understanding and Trust

This New York Times bestseller recounts the true story of the touching gift bestowed on the US by the Maasai people in the wake of the September 11 attacks. In June of 2002, a mere nine months since the September 11 attacks, a very unusual ceremony begins in a far-flung village in western Kenya. An American diplomat is surrounded by hundreds of Maasai people. A gift is about to be bestowed upon the American men, women, and children, and he is there to accept it. The gift is as unexpected as it is extraordinary. Hearts are raw as these legendary Maasai warriors offer their gift to a grieving people half a world away. Word of the gift will travel newswires around the globe, and for the heartsick American nation, the gift of fourteen cows emerges from the choking dust and darkness as a soft light of hope and friendship. With stunning paintings from Thomas Gonzalez, master storyteller Carmen Agra Deedy (in collaboration with Naiyomah) hits all the right notes in this elegant story of generosity that crosses boundaries, nations, and cultures.

The Man from Primrose Lane

The Rollercoaster of life is book of poems that were written from different thoughts that crossed my mind. All the poems were written from different experiences in my life, some good, some bad, and some spiritual. Life can go up and down like a rollercoaster, but you have to keep faith in God to keep moving forward and to never give up, and that is the main thing I want people to get from this book.

The Future of Technology

Explores the question: How do poems end? This work examines numerous individual poems and examples of common poetic forms in order to reveal the relationship between closure and the overall structure and integrity of a poem.

Number Games

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

ColdFusion Presents: New Thinking

MSIA, the Movement of Spiritual Inner Awareness, has been called the Cadillac of cults. Those interested in new religions may only know of MSIA from these kinds of labels. However, when looked at from a qualitative sociological perspective, a more complex story of religious innovation and cultural change can be told.

Writing, Directing, and Producing Documentary Films and Videos, Fourth Edition

This award-winning grammar course book provides the basis for linguistic courses and projects on translation, contrastive linguistics, stylistics, reading and discourse studies. Accessible and reader-friendly throughout, key features include: chapters divided into modules of class-length materials each new concept clearly explained and highlighted authentic texts from a wide range of sources, both spoken and written, to illustrate grammatical usage clear chapter and module summaries enabling efficient class preparation and student revision.

Deep Nutrition

There are over a million different species of insects, and individually they 8 outnumber humans by more than 10 to 1. Moreover, some insects live in close association with both plants and higher animals and naturally exchange viruses with them. It has even been speculated that viruses in general may have radiated through the plant and animal kingdoms from common insect origins. Be that as it may, since insects play pivotal roles in the biosphere, both to the benefit and detriment of mankind, they and the viruses that infect them are important subjects for study. Insects are infected by a diverse medley of viruses, and this volume focuses on those insect virus families that are found primarily or exclusively in insects. All major families of insect-selective viruses are covered except for the baculo viruses, which were described in a separate volume of The Viruses series. Included in this volume are the established families of insect viruses, the newly recognized ascovirus family, and the nudiviruses, which probably represent a separate family but currently remain unclassified. The coverage of arboviruses is limited to a single chapter that focuses on their potential utility as vectors and in insect control. Omitted for practical reasons are several individual insect viruses that have been described sporadically in the literature and probably represent novel virus families.
