An opportunity to experience the daily hustle and bustle of life in the late Middle Ages, *A Day in a Medieval City* provides a captivating dawn-to-dark account of medieval life. A visual trek through the thirteenth and fourteenth centuries--with seasoned medieval historian Chiara Frugoni as guide--this book offers a vast array of images and vignettes that depict the everyday hardships and commonplace pleasures of people living in the Middle Ages. *A Day in a Medieval City* breathes life into the activities of city streets, homes, fields, schools, and places of worship. With entertaining anecdotes and gritty details, it engages the modern reader with its discoveries of the religious, economic, and institutional practices of the day. From urban planning and education to child care, hygiene, and the more leisurely pursuits of games, food, books, and superstitions, Frugoni unearths the daily routines of private and public life. Beginning in the countryside and moving to the city and inside private homes, stunning color images throughout offer a visual ramble through medieval Florence, Venice, and Rome. *A Day in a Medieval City* is a charming portal to the Middle Ages that you'll surely want with you on your travels to Europe--or in your armchair.

A harrowing meditation on tyranny, torture, and freedom by one of Chile's most celebrated contemporary poets. Raúl Zurita's *INRI* is a visionary response to the atrocities committed under the dictatorship of General Augusto Pinochet. In this deeply moving elegy for the dead, the whole of Chile, with its

snow-covered cordilleras and fields of wildflowers, its empty spaces and the sparkling sea beyond, is simultaneously transformed into the grave of its lost children and their living and risen body. Zurita's incantatory, unapologetically political work is one of the great prophetic poems of our new century.

Cambridge IGCSE® English as a Second Language Coursebook

Before leaving home he had engaged to send back dispatches to La Stampa; after appearing there, his "letters from India" were collected and issued posthumously as *Verso la cuna del mondo* (1917), now published in English for the first time. The extent of Gozzano's travels - to Ceylon, Goa, Agra, Jaipur - makes one wonder how the writer was able to visit all or even most of the places he so vividly describes.

Al escribir este texto se ha intentado demostrar que las Ciencias físicas no son simplemente una colección o reunión de hechos que hay que recordar de memoria. Aunque estos hechos son necesarios, la memorización de fórmulas aparentemente sin significado no es lo que debería ser la Ciencia. En lugar de ello, deseamos mostrar al alumno que la Ciencia es un modo de conseguir que adquiera significado y coherencia el conocimiento que en gran parte ya posee.

El Diario del imperio. (hisp.)

Provides instructions for fifty nature experiments and activities involving both plants and animals.

Conoce a los científicos que estudiaron los fenómenos físicos. Realiza experimentos y explora los fenómenos físicos de la naturaleza. ¡Descubre si las plantas y los animales saben de física!

La Ciencia y Tú

En este texto se dilucidan varios cuestionamientos relacionados con los modelos usados en ciencia desde una perspectiva filosófica: ¿Qué es un modelo y cómo se clasifican? ¿Cuál es la función del modelo: representar o intervenir la realidad? ¿Los modelos tienen poder explicativo o solo pueden describir los fenómenos? ¿Existen algoritmos computacionales para descubrir relaciones causales? También se hace una defensa del método inductivo y se argumenta que la estadística clásica es deductiva en su axiomatización pero inductiva en su aplicación. Los debates se centran básicamente en las idealizaciones y aproximaciones usadas en la construcción de modelos y se justifica su uso en un contexto pragmático, mostrando que las idealizaciones son la norma y no la excepción en la ciencia, porque a nivel general es reconocido que los modelos son inexactos y por lo tanto, manipulables y mejorables por parte del investigador. No se discute si los modelos son verdaderos o falsos sino más bien si son útiles o inútiles, bajo ciertas condiciones que debe conocer el usuario de estos.

Descubre los insectos

Filosofía y ciencia, humanismo y conocimiento de la naturaleza se aúnan en este manifiesto ideológico dentro de una línea de pensamiento fuerte que busca la verdad sin contemplaciones, sin juegos de palabras, sacando sus garras ante las múltiples voces que desafían sus principios. Trata con rigor, sin llegar a ser un manual para especialistas, temas como el determinismo, el reduccionismo, la flecha del tiempo, el problema mente-cerebro, el azar, la teoría cuántica de la medida, la evolución de las especies, etc. El interés está sobre todo en desmentir algunas proclamaciones esotéricas, cuando no místicas, que se han hecho en nombre de la ciencia o la filosofía. Para ello se propone ir a la raíz, o al menos una de las raíces, de la divergencia entre el pensamiento humanista y el pensamiento científico: el debate que enfrenta el materialismo científico con otras concepciones ontológicas. La idea principal del ensayo es defender que la ciencia del siglo XX no ha abierto nuevas puertas al libre albedrío o al dualismo-mentalismo, en contra de lo que proclaman algunos otros autores contemporáneos. ¿Por qué el tema de la libertad humana? Porque éste es precisamente un punto clave donde divergen las distintas filosofías, es justo el punto que sitúa al ser humano en el Cosmos. Somos fragmentos de Naturaleza arrastrados por sus leyes, en tal fatalismo se desenvuelve esta obra que concluye con un canto al "amor fati". Además, se incluye un gracioso apéndice, "¿Cómo se hizo...?", narrando las desventuras que tuvo que pasar este trabajo para abrirse camino entre los oscuros claustros de las facultades de filosofía.
