Developing Inquiry for Learning

Developing Inquiry for Learning shows how university tutors can help students to improve their abilities to learn and to become professional inquirers. An increasing proportion of students entering higher education seem to assume that learning is a relatively passive process. This may be the largest single limitation on their achievement. University tutors need to be able to respond creatively to students' learning needs and difficulties. The modern teaching environment in higher education demands a sophisticated approach to teaching, learning and assessment i.e. the curriculum: its planning, its development and tutors' professional development. Tutors need fresh ideas about how to challenge students' spoon-fed approach, to enable them to become collaborative, yet independently motivated learners. In the innovative and practically proven approach developed by the authors of this book, students are guided to implement action research into their learning practices and reflections. Using a rolling programme of cyclical inquiries and whole group 'conferences' on improving learning, students write 'patches' on learning development which are then shared across the year group online. Each student's cumulative set of patches, together with their regular reflective writing, provide the basis for assembling a composite final assignment, a 'Patchwork Text', for assessment. This style of curriculum and assessment organisation encourages regular peer feedback and formative assessment, as part of the whole module process. This is a dynamic approach which builds personal confidence within students, both as learners and as professionals. Providing teaching materials and examples of students' responses, including the use of blogs, wikis and discussion boards, Developing Inquiry for Learning analyses and theorises on the deeper characteristics of the difficulties being addressed. With the provision of relevant frameworks of theory and values, readers are amply equipped to adopt, adapt and experiment within their own developments of teaching and curricula. Tutors, particularly programme leaders, and those who are responsible for the quality of student learning across programmes, are challenged in various ways to re-evaluate current provision and are helped to improve it in ways which can be matched to local situations and priorities. Peter Ovens was Principal Lecturer in Professional and Curriculum Development at Nottingham Trent University and is now a Senior Research Fellow at the University of Cumbria. Frances Wells is a Principal Lecturer in Education at Nottingham Trent University Pat Wallis is a Senior lecturer in Professional Studies at Nottingham Trent University. Cyndy Hawkins is a Senior Lecturer in the School of Education at Nottingham Trent University

Developing Inquiry for Learning

Although emerging technologies are becoming popularised for teaching, learning and research, the relationship between their use and transformative effects on higher education remain largely unexplored. This edited collection seeks to fill this gap by providing a nuanced view, locating higher education pedagogical practices at an intersection of emerging technologies, authentic learning and activity systems. Providing numerous case studies as examples, the book draws from a wide range of contexts to illustrate how such a convergence has the potential to track transformative teaching and learning practices in the higher education sector. Chapters provide the reader with a variety of transformative higher education pedagogical practices in southern contexts, theorised within the framework of Cultural Historical Activity Theory (CHAT) and tool mediation, while using authentic learning as a pedagogical model upon which this theoretical framework is based. The topics covered in the book have global relevance, with research paying particular attention to South Africa, Australia and New Zealand, where the authors are based. The book will be of interest to educators, researchers and practitioners in higher education, as well as those interested in emerging technologies in education more generally.

Activity Theory, Authentic Learning and Emerging Technologies

The first book to offer an in-depth exploration of the topic of problem-based learning with contributions from international experts The Wiley Handbook of Problem-Based Learning is the first book of its kind to present a collection of original essays that integrate the research and practice of problem-based learning in one comprehensive volume. With contributions from an international panel of leading scholars, researchers, practitioners and educational and training communities, the handbook is an authoritative, definitive, and contemporary volume that clearly demonstrates the impact and scope of research-based practice in problem-based learning (PBL). After many years of its successful implementation in medical education curricula, problem-based learning is now being emphasized and practiced more widely in K-12, higher education, and other professional fields. The handbook provides timely and stimulating advice and reflection on the theory, research, and practice of PBL. Throughout the book the contributors address the skills needed to implement PBL in the classroom and the need

for creating learning environments that are active, collaborative, experiential, motivating and engaging. This important resource: Addresses the need for a comprehensive resource to problem-based learning research and implementation Contains contributions from an international panel of experts on the topic Offers a rich collection of scholarly writings that challenge readers to refresh their knowledge and rethink their assumptions Takes an inclusive approach that addresses the theory, design, and practice of problem-based learning Includes guidelines for instructional designers, and implementation and assessment strategies for practitioners Written for academics, students, and practitioners in education, The Wiley Handbook of Problem-Based Learning offers a key resource to the most recent information on the research and practice of problem-based learning.

The Wiley Handbook of Problem-Based Learning

This book provides a comprehensive conceptual framework, case studies, workshop processes and designs for academic development programs supported by two key concepts: Participatory Action Learning and Action Research (PALAR)—a conceptual integration of action learning and participatory action research—and action leadership.

A Participatory Paradigm for an Engaged Scholarship in Higher Education

This book highlights the importance of academic staff having focused conversations about teaching. The emphasis is on using this approach to build individual and team capacity and to bring about institutional change. It emphasises the distributed nature of expertise in teaching which exists at all levels in universities and how conversation can be harnessed to develop and share this. Drawing on research related to dialogue, coaching, communities of practice and building learning organisations, the text identifies simple yet effective ways to engage in learning conversations, develop educational practice, and achieve institutional goals. Critical Practice in Higher Education provides a scholarly and practical entry point for academics into key areas of higher education practice. Each book in the series explores an individual topic in depth, providing an overview in relation to current thinking and practice, informed by recent research. The series will be of interest to those engaged in the study of higher education, those involved in leading learning and teaching or working in academic development, and individuals seeking to explore particular topics of professional interest. Through critical engagement, this series aims to promote an expanded notion of being an academic – connecting research, teaching, scholarship, community engagement and leadership – while developing confidence and authority.

Conversations to Change Teaching

How do you develop students' capacities as independent learners, build their confidence and motivation to identify their own research agendas, and facilitate their critical thinking and research skills for effectively exploring their chosen topic? Inquiry-based learning (IBL) offers a proven means to achieve these outcomes. IBL is a scaffolded learner-centered, student-led approach to inquiry whereby students progressively design and lead their own inquiry process, with support from the instructor. It's a powerful pedagogical approach that you can progressively adopt, first adopting it as an activity in a course to develop you and your students' comfort with the practice, right up to developing an entire course or program utilizing IBL. It offers varying levels of engagement as you and your students gain familiarity with the practice, from the instructor providing structured support, to formative guidance as students gain confidence, to a point where students become increasingly self-directed and independent and are supported by the review of student peers and validated by presentations of their work to the class. This pedagogy shifts the student/instructor relationship, with the former leading and the latter supporting. IBL is a flexible teaching and learning approach that can be progressively adopted and developed without a specific formula, and that positions students as co-constructors of knowledge, rather than passive recipients. It is student-driven, creates engagement, develops a curiosity mindset, promotes group learning that is collaborative rather than competitive, fosters metacognition, and builds confidence as students learn to deal with ambiguity and risk. Each chapter offers personal stories, vignettes, examples of practice, and discussions of issues. This book offers higher education instructors at any career stage and in any discipline, a realistic guide to incorporating curiosity and inquiry-based learning into their classrooms to promote long term knowledge creation and retention and life-wide learning. IBL is being increasingly adopted across the English-speaking world. Beyond its inherent capacity to promote independent learning, it offers a perfect foundation for preparing students for Signature Work and capstone courses; and is adaptable to small and large classes.

Reigniting Curiosity and Inquiry in Higher Education

Offering interdisciplinary, evidence-informed discussion and practical resources for using observation as a tool of educational inquiry to enhance understanding and the quality of teaching and learning in higher education, this book draws on forward-thinking, contemporary research. Illustrated with real examples and case studies of collaborative observation from a range of subject areas, it provides a conceptual and practical guide for harnessing observation to better understand the relationship between teaching and learning. This is a must-read book for all those interested and involved in using observation to understand, develop and improve the quality of teaching and learning in higher education.

Developing Excellence in Teaching and Learning in Higher Education through Observation

This book provides teachers in higher education with what they need - a compelling framework for improving student learning. It combines a comprehensive synthesis of the latest research on learning and teaching with practical strategies for implementing it in their classrooms² - Professor Ken Bain, Author of *What the Best College Teachers Do*, Vice Provost for Instruction, Montclair State University Praise for the First Edition: 'For too long we have waited for a book that brings together the best contemporary thinking about learning and teaching and that connects with academics² everyday teaching practice in an engaging way. At last, in this book, we have it² - Ronald Barnett, Institute of Education, University of London Worldwide, higher and professional education services are challenged by increased student numbers and diversity, tougher demands for professional accountability, increasing calls for educational relevance and thinning resources. This new edition addresses key issues in the practice and theory of teaching and learning in the sector and includes fully updated discussions of: - the professional in academic practice - mentoring - teaching with technology - the relationship between learning objectives, outcomes and assessment - the novice teacher The authors draw on theory, practice and current research to provide a new way of thinking about the many aspects of learning and teaching in higher education, enabling readers to reflect critically on their teaching. They also propose a model for continuous professional development appropriate to the higher education academic community. *Learning & Teaching in Higher Education: The Reflective Professional* is for lecturers, researchers, staff developers and others involved in teaching in higher and professional education. Greg Light is Director of the Searle Center for Teaching Excellence and an associate professor in the School of Education and Social Policy at Northwestern University, Chicago. Roy Cox was a visiting academic at the University of London where he helped establish one of the first centres for learning and teaching in higher education in the world. Susanna Calkins is Associate Director for Faculty development at the Searle Center for Teaching Excellence.

Learning and Teaching in Higher Education

Full of practical advice, this book will stimulate thoughtful, reflective practice, and a good understanding of teaching, learning and assessing in higher education.

Learning, Teaching and Assessing in Higher Education

Understanding the art of academic conversations requires a building of trust, willingness to share, and a mind for critical thinking. Guidance for holding conversations with meaning and doing philosophy with learners is modeled, as well as how implementing classroom and collegial discourse benefits our society.

The Value of Academic Discourse

Philosophers have warned of the perils of a life spent without reflection, but what constitutes reflective inquiry - and why it's necessary in our lives - can be an elusive concept. Synthesizing ideas from minds as diverse as John Dewey and Paulo Freire, the *Handbook of Reflection and Reflective Inquiry* presents reflective thought in its most vital aspects, not as a fanciful or nostalgic exercise, but as a powerful means of seeing familiar events anew, encouraging critical thinking and crucial insight, teaching and learning. In its opening pages, two seasoned educators, Maxine Greene and Lee Shulman, discuss reflective inquiry as a form of active attention (Thoreau's "wide-awakeness"), an act of consciousness, and a process by which people can understand themselves, their work (particularly in the form of life projects), and others. Building on this foundation, the *Handbook* analyzes through the work of 40 internationally oriented authors: - Definitional issues concerning reflection, what it is and is not;

- Worldwide social and moral conditions contributing to the growing interest in reflective inquiry in professional education; - Reflection as promoted across professional educational domains, including K-12 education, teacher education, occupational therapy, and the law; - Methods of facilitating and scaffolding reflective engagement; - Current pedagogical and research practices in reflection; - Approaches to assessing reflective inquiry. Educators across the professions as well as adult educators, counselors and psychologists, and curriculum developers concerned with adult learning will find the Handbook of Reflection and Reflective Inquiry an invaluable teaching tool for challenging times.

Handbook of Reflection and Reflective Inquiry

The book is divided into five parts representing five key issues discussed at the workshop, with the call for contributions to this book framed around the following topic areas: 1. Organisation - team size and composition, supporting with sessions such as lectures and tutorials, sourcing projects, ways in which tutors monitor progress and provide guidance. 2. Management – strategies and tools for teams to use for project management, and ways in which students manage their project progress. 3. Assessment - issues of individual participation, how to assess learning, skills and personal development. Assessment of process and/or product, and fairness in group assessing. 4. Development of skills - using team projects to provide opportunities, getting students to recognise them, and reflection on learning and self development. 5. Differences from the workplace – preparing students for global team working.

Teaching with Team Projects in Higher Education

Edited collection featuring essays from exceptional National Teaching Fellows. Presents the cutting-edge of pedagogical thinking on the most important topics in higher education today, including student engagement, assessment, internationalisation and employability. Destined to become a 'must-read' guide for anyone involved in higher education.

For the Love of Learning

This study argues that there is little hope of maintaining quality in higher and further education unless those in academia share common goals. It demonstrates how results can be achieved if the principles of high quality learning are applied along with total quality management-type strategies.

Resources in Education

This book offers a comprehensive, up-to-date review of the recent professional developments of teachers of English in the western region of China in the context of English language teaching reform and teacher education reform. It discusses a wealth of theories, frameworks, qualitative case studies and quantitative investigations, while also covering a range of key practices that are indispensable. It equips readers with an in-depth understanding of the impact of the current curriculum reform on the promotion of teachers' cognition, emotions, attitudes and awareness of their self-development, as well as teachers' corresponding efforts to update their educational concepts, reassess their teacher roles, enhance their teaching skills, and implement new approaches to their professional development. It is a valuable resource for anyone pursuing research in this field as well as in-service teachers, teacher educators and education administrators. And as it offers practical help for the potential difficulties and challenges they might encounter, it is also a must-read for the student teachers of English.

Achieving Quality Learning in Higher Education

Is it possible to bring university research and student education into a more connected, more symbiotic relationship? If so, can we develop programmes of study that enable faculty, students and 'real world' communities to connect in new ways? In this accessible book, Dilly Fung argues that it is not only possible but also potentially transformational to develop new forms of research-based education. Presenting the Connected Curriculum framework already adopted by UCL, she opens windows onto new initiatives related to, for example, research-based education, internationalisation, the global classroom, interdisciplinarity and public engagement. A Connected Curriculum for Higher Education is, however, not just about developing engaging programmes of study. Drawing on the field of philosophical hermeneutics, Fung argues how the Connected Curriculum framework can help to create spaces for critical dialogue about educational values, both within and across existing research groups, teaching departments and learning communities. Drawing on vignettes of practice from around the world, she

argues that developing the synergies between research and education can empower faculty members and students from all backgrounds to contribute to the global common good.

A Study on Professional Development of Teachers of English as a Foreign Language in Institutions of Higher Education in Western China

This volume covers the many issues and concepts of how inquiry-based learning (IBL) can be applied to faculty and institutional development. This volume serves as a conceptual and practical resource and guide for educators and offers practical examples of IBL in action and diverse strategies for how to implement IBL in different contexts.

A Connected Curriculum for Higher Education

When the Scholarship of Teaching and Learning (SoTL) emerged, it often concentrated on individual faculty practice in one classroom; it is now, however, increasingly common to find work in SoTL focused more broadly. SoTL studies may engage with a cluster of courses, a program, a particular population of students, a pedagogical approach, or a field—all of which are represented in the essays collected here by authors from a diverse array of institutions and nations. This volume features examples of SoTL research conducted in, and applied to, a variety of contexts and disciplines, offering a theoretical framework for an expanded vision of SoTL—one that moves beyond the individual classroom.

Inquiry-Based Learning for Faculty and Institutional Development

Teacher Collaboration for Professional Learning contains the essential information, tools, and examples teachers and school leaders need to create, manage, and sustain successful collaborative groups. Designed to be a hands-on resource, this practical guide shows you how to: Advocate for collaborative teacher learning Develop and sustain collaborative research groups Organize and conduct productive research projects Address issues of ethics, leadership, and group dynamics Evaluate and sustain collaborative learning activities Based on data from a major survey, Teacher Collaboration for Professional Learning features extensive case examples from model research communities collaborating within schools, across districts, in partnership with universities, and as online networks. The book also offers a wealth of reproducible templates as well as reflection questions and exercises?invaluable tools for organizing study groups.

Applying the Scholarship of Teaching and Learning beyond the Individual Classroom

National efforts have been made to encourage technology integration in teacher preparation with expectations for frequent and successful applications with K-12 learners. While online learning has become pervasive in many fields in education, it has been somewhat slow to catch on in K-12 settings. The Handbook of Research on Emerging Practices and Methods for K-12 Online and Blended Learning is a collection of innovative research on the applications of technology in online and blended learning environments in order to develop quality courses, explore how content is delivered across disciplines and settings, and support the formation of relationships and enrichment opportunities. While highlighting topics including learning initiatives, institutional policies, and program structures, this book is ideally designed for teachers, principals, early childhood development centers, university faculty, administrators, policymakers, researchers, and practitioners.

Generic skills in higher education

"This research publication accommodates in-depth studies that elucidate both the prospects and problems of learning assessment in higher education"--Provided by publisher.

Teacher Collaboration for Professional Learning

The International Handbook on Self-study of Teaching and Teacher Education Practices is of interest to teacher educators, teacher researchers and practitioner researchers. This volume: -offers an encyclopaedic review of the field of self-study; -examines in detail self-study in a range of teaching and teacher education contexts; -outlines a full understanding of the nature and development of self-study; -explores the development of a professional knowledge base for teaching through self-study; -purposefully represents self-study through research and practice; -illustrates examples of self-study in teaching and teacher education.

Handbook of Research on Emerging Practices and Methods for K-12 Online and Blended Learning

For teachers in higher education who haven't been able to catch up with developments in teaching and learning, James Davis and Bridget Arend offer an introduction that focuses on seven coherent and proven evidence-based strategies. The underlying rationale is to provide a framework to match teaching goals to distinct ways of learning, based on well-established theories of learning. The authors present approaches that readers can readily and safely experiment with to achieve desired learning outcomes, and build confidence in changing their methods of teaching. Research on learning clearly demonstrates that learning is not one thing, but many. The learning associated with developing a skill is different from the learning associated with understanding and remembering information, which in turn is different from thinking critically and creatively, solving problems, making decisions, or change paradigms in the light of evidence. Differing outcomes involve different ways of learning and teaching strategies. The authors provide the reader with a conceptual approach for selecting appropriate teaching strategies for different types of content, and for achieving specific learning objectives. They demonstrate through examples how a focused and purposeful selection of activities improves student performance, and in the process makes for a more effective and satisfying teaching experience. The core of the book presents a chapter on each of the seven ways of learning. Each chapter offers a full description of the process, illustrates its application with examples from different academic fields and types of institutions, clearly describes the teacher's facilitation role, and covers assessment and online use. The seven ways of learning are: Behavioral Learning; Cognitive Learning; Learning through Inquiry; Learning with Mental Models; Learning through Groups and Teams; Learning through Virtual Realities; and Experiential Learning. Along the way, the authors provide the reader with a basis for evaluating other approaches to teaching and other learning methodologies so that she or he can confidently go beyond the "seven ways" to adapt or adopt further strategies. This is the ideal companion for teachers who are beginning to explore new ways of teaching, and want to do some serious independent thinking about learning. The book can also be used to prepare graduate students for teaching, and will be welcomed by centers for teaching and learning to help continuing faculty re-examine a particular aspect of their teaching.

Handbook of Research on Assessment Technologies, Methods, and Applications in Higher Education

The leading authorities in the field produced this comprehensive resource, which provides strategies and methods for fostering Transformative Learning (TL) practice in a wide variety of higher and adult education settings. The book answers relevant questions such as: What are effective practices for promoting TL in the classroom? What is it about TL that is most helpful in informing practice? How does the teaching setting shape the practice of TL? What are the successes, strengths, and outcomes of fostering TL? What are the risks and challenges when practicing TL in the classroom?

International Handbook of Self-Study of Teaching and Teacher Education Practices

"This book features innovative applications for the integration of technology into everyday teaching practices"--Provided by publisher.

Facilitating Seven Ways of Learning

This book provides a contemporary view of the characteristics of expertise for teaching in higher education, based on the strong foundation of research into expertise, and empirical and practical knowledge of the development of teaching in higher education. Taking key themes related to the characteristics of expertise, this edited collection delivers practical ideas for supporting and enabling professional learning and development in higher education as well as theoretical constructs for the basis of personal reflection on practice. Providing an accessible, evidence-informed theoretical framework designed to support individuals wishing to improve their teaching, *Developing Expertise for Teaching in Higher Education* considers teaching excellence from an expertise perspective and discusses how it might be supported and available to all. It invites a call to action to all policymakers and strategic leaders who make a claim for teaching excellence to consider how professional learning and the development of expertise can be embedded in the culture, environment and ways of working in higher education institutions. Full of practical examples, based on scholarship and experience, to guide individual teachers, educational developers and policymakers in higher education, this book is a must-read text for those new to teaching in higher education and those looking to improve their practice.

Transformative Learning in Practice

Higher education institutions (HEIs) are providers of knowledge and competencies. HEIs are very important to the development of society and the regions they impact geographically. The current uncertainty and challenges require new ways of educating. They require the use of new pedagogical tools that prepare students to deal with real and future problems, train them to deliver solutions, help them to analyze challenges and create future scenarios, and engage them in collaborative work toward the creation of innovation. Collaborative work between small and medium-sized enterprises (SMEs) and HEIs broadens networking, stimulates research, accelerates innovation, and nurtures regional development. *The Impact of HEIs on Regional Development: Facts and Practices of Collaborative Work With SMEs* shares the best practices of implemented co-creation innovation processes by HEIs. It describes the pedagogical processes and tools used to respond to SME challenges. Covering topics such as innovation co-creation networks, sustainable development, and teaching entrepreneurship, this premier reference source is an excellent resource for policymakers, administrators, educators and students of higher education, practitioners, librarians, researchers, and academicians.

Online Learning Communities and Teacher Professional Development: Methods for Improved Education Delivery

Teachers spend much of their time on assessment, yet many higher education teachers have received minimal guidance on assessment design and marking. This means assessment can often be a source of stress and frustration. *Assessment and Feedback in Higher Education* aims to solve these problems. Offering a concise overview of assessment theory and practice, this guide provides teachers with the help they need.

Developing Expertise for Teaching in Higher Education

Members of today's online educational settings are often isolated which can prohibit the sharing of ideas and best practices among individuals working and learning as a collective group. Promoting collaboration across various disciplines and departments fosters professional development activities, as well as creates strong connections to the entire online community. *Building Online Communities in Higher Education Institutions: Creating Collaborative Experience* cultivates knowledge on topics pertaining to the improvement of communication and collaboration in online learning communities. Advancing the current scope of research in this field, this book is designed for use by faculty, students, researchers, practitioners, and college administrators interested in strengthening communication and collaboration in virtual settings.

The Impact of HEIs on Regional Development: Facts and Practices of Collaborative Work With SMEs

This book focuses on learning and pedagogy around inquiry using technology as a cognitive tool. Specific inferences and applications of learning through an inquiry approach are explored and illustrations are drawn from educational settings.

Assessment and Feedback in Higher Education: A Guide for Teachers

With the increased interest in study abroad from government, educators, employers and students, the question is: is study abroad engendering the desired intercultural competencies and intellectual development? To achieve this goal, this book proposes two strategies: structure study abroad to bridge the separation of academic learning from experiential and intercultural learning; and integrate study abroad with the undergraduate curriculum. In proposing this integration, the editors take into account the need for institutional change, and recognize faculty members' concerns about maintaining the integrity of the curriculum, teaching in areas outside their expertise, and keeping up with ever-evolving institutional missions. This book opens with two chapters presenting different theoretical perspectives relevant to the integration of study abroad into the curriculum. The following nine chapters provide examples from a variety of disciplines – from anthropology and religious studies, to literature, urban studies, biology and public health – and within such contexts as distance learning, service learning, and the senior thesis. The concluding chapter considers faculty development activities and institutional structures and policies that support curriculum integration. While the examples are drawn from Beloit College and Kalamazoo College – liberal arts colleges with substantial study abroad enrollments, and nationally recognized for their innovative practices – readers will recognize they are easily adaptable to their own institutions. The two colleges achieved their curricular innovations with limited financial resources, and in the context that most of their students are dependent on financial aid. The transformational ideas and practices

described here provide material for reflection and campus conversations for anyone concerned with developing global citizens and well-educated students, and offer a blueprint for implementation.

Building Online Communities in Higher Education Institutions: Creating Collaborative Experience

The capacity to reflect – individually and with others – is considered valuable in teacher professional development internationally. In the field of Teaching English as a Second or Foreign Language, reflective practice has been deemed to be a precious tool at the pre-service level and in the ongoing development of teachers. Despite the importance of teacher reflection, the field of Teaching English as a Foreign Language in Higher Education has tended to overlook this topic and especially its collaborative and emotional elements. This book proposes a new and practical model for engaging teachers in transformational learning through an 'emotionalized' version of reflection. More specifically, the Collaborative, Appreciative, Reflective Enquiry (CARE) model represents a guide for teachers who wish to engage in reflective practice alone and with others in an appreciative context. As such, this book will be invaluable to in-service language teachers and teacher educators who are committed to realizing their potential as educators and human beings through growth that only emancipatory reflection and positive emotionality can bring.

Inquiry-Based Learning

Active learning occurs when a learning task can be related in a non-arbitrary manner to what the learner already knows and when there is a personal recognition of the links between concepts. The most important element of active learning is not so much in how information is presented, but how new information is integrated into an existing knowledge base. In order to successfully implement active learning into higher education, its effect on student engagement must be studied and considered. The Handbook of Research on Active Learning and Student Engagement in Higher Education focuses on assessing the effectiveness of active learning and constructivist teaching to promote student engagement and provides a wide range of strategies and frameworks to help educators and other practitioners examine the benefits, challenges, and opportunities for using active learning approaches to maximize student learning. Covering topics such as online learning environments and engagement approaches, this major reference work is ideal for academicians, practitioners, researchers, librarians, industry professionals, educators, and students.

Integrating Study Abroad Into the Curriculum

This encyclopaedia is a dynamic and living reference that student teachers, teacher educators, researchers and professionals in the field of education with an accent on all aspects of teacher education, including: teaching practice; initial teacher education; teacher induction; teacher development; professional learning; teacher education policies; quality assurance; professional knowledge, standards and organisations; teacher ethics; and research on teacher education, among other issues. The Encyclopedia is an authoritative work by a collective of leading world scholars representing different cultures and traditions, the global policy convergence and counter-practices relating to the teacher education profession. The accent will be equally on teaching practice and practitioner knowledge, skills and understanding as well as current research, models and approaches to teacher education.

Reflective Development through the Care Model

This book has been primarily written for people who are interested and involved in helping students maximise the learning and development they gain from their higher education experience. The authors contributing to this book hope that their attempt to examine and give practical meaning to the idea of lifewideness makes sense to you and helps you support and facilitate development of people in your professional context. We hope also that it might have meaning for you in your own life. The book is also written for people who are helping higher education institutions develop a better understanding of the ways in which students engage in and are shaped by their whole life experience while they are studying. And for those people who are trying to bring about change in institutional practice, particularly those who are finding it challenging, we hope the contributions in this book will reinforce your conviction that this is a worthwhile thing to do. In recent years, Universities in the UK have been encouraged to evaluate what they do through the lens of the students' experience. This has resulted in an increasing institutional interest and awareness in the way in which students integrate higher education with their life beyond the campus. Student Support Services in some universities have been inspired by the visionary report 'Learning Reconsidered: A Campus-wide Focus on the Student Experience' (NASPA

and ACPA 2004). We hope that this book will encourage and be of value to those who make decisions or who create policies relating to the student experience.

Handbook of Research on Active Learning and Student Engagement in Higher Education

Discourse, Dialogue and Technology Enhanced Learning is invaluable to all those wanting to explore how dialogic processes work and how we facilitate them. Dialogue is an important learning tool and it is by understanding how language affects us and how we use language to encourage, empathise, inquire, argue and persuade that we come closer to understanding processes of change in ourselves and our society. Most researchers in Education will find themselves interpreting some form of data in the form of words; whether these words be explanations, conversations, narrations, reflections, debates or interviews and whether they are conducted through digital media or face-to-face. Discourse, textual or spoken, is therefore central to researching education. Each chapter focuses on the ways in which alternative levels of discourse analysis provide tools for the researcher, enabling insights into the way language works in learning, teaching practice and wider society. Drawing on the author's own 'DISCOUNT' discourse analysis coding scheme and including a wide range of dialogue examples, this book covers: Why Dialogue? The Role of Dialogue in Education. Debate: Learning to Argue and Arguing to Learn Towards Meaning-Making: Inquiry, Narrative and Experience The Role of the Significant Other: Facilitation, Scaffolding and Mediation Inclusion, Collaboration and Community Media, Mode and Digital Literacy Researching Voices and Texts Discourse, Dialogue and Technology Enhanced Learning will be an essential resource for all students, educators and educational researchers who have an interest in the role of discourse in educational contexts.

Encyclopedia of Teacher Education

This book serves as a reference point to inform continuing professional learning and development (CPLD) initiatives at both individual and institutional levels. It serves as a guide for faculty engaged in online teaching within the higher education sector, in universities and vocational education institutions. It moves beyond a technology-driven approach by emphasising pedagogy and design as key issues in online teaching practice. It will highlight challenges to staff engagement and how they may be overcome, drawing on evidence-based examples and models of CPLD from institutions around the world. It is underpinned by a framework that emphasises the need for CPLD that is sustainable and adaptable to a range of contexts, particularly in professional learning and development. This book also highlights practices aimed at sustainable, continuing, learning, and brings together a range of solutions and suggestions to assist educators and institutions with CPLD.
