Critical thinking for Students 4th Edition

Critical thinking—every scholar in the literature has defined it, but there is no clearly agreed upon definition. No wonder polls and surveys reveal that few college-level faculty can define critical thinking or know how to teach it. Still, critical thinking keeps appearing in accreditation standards and surveys of the skills employers seek in college graduates. The good news is that we do know that critical thinking can be taught. But the concept cries out for the simplification, translation into discipline-relevant course outcomes, tangible teaching strategies, and concrete assessment techniques that this book will provide. Like a course or a workshop, this book proposes learning outcomes for the reader—promises of what the reader will be able to do after reading it. These include:

- explain what critical thinking is in simple terms;
- convincingly explain to students why it is important for them to learn critical thinking, and, if they tune out, what they stand to lose;
- overcome the challenges that teaching critical thinking presents;
- identify the type of course content to which critical thinking can be applied and, therefore, that readers can use to teach critical thinking;
- integrate critical thinking into the design of a new or existing course in any discipline;
- write assessable critical thinking learning outcomes that are compatible with and make sense in any discipline;
- select and adapt activities and assignments that will give students no- or low-stakes practice with feedback in critical thinking using a variety of questions, tasks, and teaching methods.

At the same time, she stresses that students must adapt how they read and how they study to suit the characteristics of each unique academic discipline. This text aligns closely with the ways students read, study, learn, think, and network in the twenty-first century. Critical Thinking Skills For Dummies

Thinking is not a spectator sport. Research has shown that the skills of critical thinking must be practiced with a wide variety of problems in many different contexts in order to be learned and retained. The exercises, questions, and reviews in this workbook are designed to provide the systematic practice needed to help readers become more critical thinkers. By reading and responding to the questions before reading the accompanying chapter in the text, readers will develop a framework that will help them to comprehend, anticipate, and organize the information in the accompanying chapter. Based on principles of active learning with authentic tasks, all of the exercises were written to be similar to problems and situations readers are likely to encounter in real life -- and they provide numerous examples for both short and extended writing assignments. Problems include topics such as saving money; understanding a research report that appears in a newspaper; recognizing propaganda; reaching reasoned conclusions; avoiding common biases; and deciding when a risk is "too risky." These exercises also work well for cooperative learning projects and are designed to help adult learners develop the skills and the habits of mind essential for life-long learning. Designed to be used in conjunction with Halpern's text, *Thought & Knowledge*, this workbook could also be used with other texts or as a stand-alone enhancement in courses on thinking skills and cognitive psychology. All exercises along with syllabus suggestions and self assessments are available in the Instructor's Manual.

Thinking Critically in College

This study used an iterative Delphi survey process of about 600 faculty, employers, and policymakers to identify writing, speech and listening, and critical thinking skills that college graduates should achieve to become effective employees and citizens (National Education Goal 6). Participants reached a consensus about the importance in critical thinking of the ability to detect: indirect persuasion including the use of leading questions that are biased towards eliciting a preferred response, use of misleading language, use of slanted definitions or comparisons, and instances where irrelevant topics or considerations are brought into an argument to divert attention from the original issue. With regard to effective writing respondents thought that graduates should be able to use active or passive voice where appropriate, use correct grammar, use specific language conventions of their academic discipline, and use language that their audience understands. With regard to speech communication skills respondents reached agreement about the importance of information exchange, conversation management, group communication, and using and understanding spoken English and non-verbal signs. Extensive tables detail the Delphi survey results. (Contains 168 references.) (JB)
