put in how many samples

heat the sample to 95 degrees for five minutes

take a picture of the fluorescence

make a standard curve by doing a dilution series of a plasmid

use this in a dilution series

put 45 microliters of salmon sperm dna into each of the dilution

rinse the tip

balance the microfuge

rinsing the tip

put your dilution series on ice

using the platinum qpcr super mix

purchase an aliquot into small tubes

wicking down the side of the tube

pushed my thumb down to the first stop

dispense into very small tubes

invert the tube a few times

add your five microliters of template to your reactions

get the tip wet by measuring up and down a few times

put your wetted tip into the reaction mix

dispensing five microliters of our template into each of these wells

cover up parts of the plate

rip off a strip of cellophane tape

put the tip just past the surface of the the dna sample

touch the side of the tube of the well with the tip

put the caps on

move on to adding the templates for our standard curves

adding roughly five copies of my target per reaction

place it in the spinner

forces the bubbles up to the top

read at the end of the 58 degree cycles

start to heat the plate up to 95 degrees

label these with the number of copies

put 5 microliters of that into our reaction

ran 45 cycles of the reaction

establishing a limit of detection

switch the scales from logarithmic to linear

export all of the raw data

the notes section
