The Little Manger Mouse

What does this short story animated by tiny jungle creatures teach us? In this book you will find a story that will help kids to learn some fundamentals of finance, while having fun. Money or technical elements won't be mentioned, since we will introduce a mental approach, that will be useful for the resolution of problems. We will also teach how personal enrichment can be used to help people around us. "Everyone knows that ants are extraordinary animals. They work tirelessly, they can spend hours and hours, even days, hunting, transporting and storing food supplies for the whole community. They are fast rescuers, that never leave a wounded companion behind, but they rather rush to aid and quickly transport them to safety. They are also experienced builders. They can build a completely safe den, full of galleries and secret rooms, in no time. And they're so strong! They can easily lift up to fifty times their weight." We will show how the fundamentals of finance are more common than we think, even in the animal world! Concepts like investment, income, marketing and more will become easily understandable, thanks to the stories of our little friends. FREQUENTLY ASKED QUESTIONS: Who is this book for? This book is perfect for kids in a pre-school age, for which it will be an important experience, if read by a parent. It's also perfect for elementary school children, that will learn useful lessons for everyday occasions, while exploring the short stories. Why should I choose this book? The concepts of this book won't be taught at school, and it's rare to find them in other children's books. Furthermore, they fit very well with the

notions of logic, maths and science that will be studied at school. When should it be read? It's perfect to be read as a bedtime story. Surely the child will ask for more reading, precisely because it's written in a cheerful and involving way, that will keep the little readers and listener's attention up. What will happen when the children will grow? The book will remain modern. We advice to keep it within reach into the library, because parents will notice that the concepts are useful for them as well. Now, with just some clicks, make a gift that will be able to improve the life of your little reader.

How is academia portrayed in children's literature? This Element ambitiously surveys fictional professors in texts marketed towards children, who are overwhelmingly white and male, tending to be elderly scientists. Professors fall into three stereotypes: the vehicle to explain scientific facts, the baffled genius, and the evil madman. By the late twentieth century, the stereotype of the male, mad, muddlehead, called Professor SomethingDumb, is formed in humorous yet pejorative fashion. This Element provides a publishing history of the role of academics in children's literature, questioning the book culture which promotes the enforcement of stereotypes regarding intellectual expertise in children's media. This title is also available, with additional material, as Open Access.

Living God's Way

The United Nations' designation of 1979 as the International Year of the Child marked the first global effort undertaken to heighten awareness of the special needs of children. Activities initiated during this special year were designed to promote purposive and collaborative actions for the benefit of children throughout the world. Michigan State University's celebration of the International Year of the Child was held from September 1979 through June 1980. A variety of activities focused attention on the multiplicity of factors affecting the welfare of today's children as well as the children of the future. Many people involved with the university were concerned that benefits to children continue beyond the official time allocated to the celebration. The series Child Nurturance is one response to this concern. The first five volumes of Child Nurturance reflect directly the activities held on the Michigan State

University campus and consist of original contributions from guest speakers and invited contributors. Subsequent biennial volumes will present original contributions from individuals representing such fields as anthropology, biology, education, human ecology, psychology, philosophy, sociology, and medicine. We hope the material presented in these volumes will promote greater understanding of children and encourage interdisciplinary inquiry into the individual, family, societal and cultural variables which influence their welfare and development. We would like to express both our thanks and our admiration for who not only typed the camera-ready copy for each of Margaret Burritt the volumes, but also served as general manager of the entire project.

John 3:16

This book presents some highlights from the deliberations of the 2003 conference of the International Study Association on Teachers and Teaching (ISATT). Part 1 presents the five keynote addresses of the conference, while Parts 2 through 4 present selected papers related to each of three sub-themes: knowledge construction and learning to teach, perspectives on teachers' personal and professional lives, and teachers' workplace as context for learning. The chapters in this book provide an array of approaches to understanding the process of teacher learning within the current context of the changing workplace environment. They also provide an important international perspective on the complex issues revolving around the international educational reform movement. Basically, they show how teachers' workplace (inside and outside schools) are more than ever subject to continuous change and that, subsequently, standards for teaching must be flexible to these changing conditions. This asks for a redefinition of teacher professionalism in which the role of context in teacher learning is emphasized as well as the improvement of the quality of teacher thinking and learning. Related to the ever-changing context of teaching, a dynamic approach to teaching and teacher learning is required, in which identity development is crucial. Researchers have an important role to play in revealing and explaining how teachers can build their professional identity, through self-awareness and reflection, in the ever-changing educational contexts throughout the world.

Clever Cub Learns about Love

Cuddle up with Nicholas the bunny in Richard Scarry's beloved classic. I am a bunny. My name is Nicholas. I live in a hollow tree. When winter comes, Nicholas watches the snow falling from the sky, then curls up in his hollow tree and dreams about spring. In print for well over 50 years, this beautifully illustrated, gentle story has been a favorite Golden Book for generations.
