À partir de données probantes tirées de ces études, les auteures démontrent que l'allaitement diffère de l'alimentation avec une préparation commerciale, et ce, sous presque tous les aspects examinés. Elles souhaitent inciter les professionnels de la santé, qui continuent de considérer l'allaitement et l'alimentation avec des préparations commerciales comme des pratiques équivalentes ou permutable sans grande conséquence, à prendre conscience de l'immense potentiel du lait humain et de l'allaitement pour le mieux-être de nos sociétés.

Biologie de l'allaitement : le sein, le lait, le geste

While much has been written about the concept of terroir as it relates to wine, this book expands the concept into cuisine and culture more broadly. Bringing together stories of people farming, cooking and eating, the author focuses on a series of examples ranging from shagbark hickory nuts in Wisconsin to wines from northern California

The Taste of Place

Across the globe, people are challenging the agro-industrial food system and its exploitation of people and resources, reduction of local food varieties, and negative health consequences. In this collection leading international anthropologists explore food activism across the globe to show how people speak to, negotiate, or cope with power through food. Who are the actors of food activism and what forms of agency do they enact? What kinds of economy, exchanges, and market relations do they practice and promote? How are they organized and what are their scales of political action and power relations? Each chapter explores why and how people choose food as a means of forging social and economic justice, covering diverse forms of food activism from individual acts by consumers or producers to organized social groups or movements. The case studies embrace a wide geographical spectrum including Cuba, Sri Lanka, Egypt, Mexico, Italy, Canada, France, Colombia, Japan, and the USA. This is the first book to examine food activism in diverse local, national, and transnational settings, making it essential reading for students and scholars in anthropology and other fields interested in food, economy, politics and social change.

Food Activism

Cet ouvrage collectif se penche sur les repas préparés et distribués en établissement de santé. Dans une première partie, les auteurs s'intéressent à ce qui nous pousse, physiologiquement, à manger. Dans un second temps, les EHPAD seront plus spécifiquement étudiés, alors que la troisième partie s'intéresse au suivi des publics hors de l'institution. Il s'agit ici de ne pas opposer le soin et le prendre soin, mais de penser conjointement les besoins nutritionnels et les plaisirs alimentaires.

Se nourrir ou manger ?

Manger de la viande : un risque ou un plaisir ? Une enquête approfondie sur un sujet encore largement tabou... Depuis la crise de la vache folle, notre pays se targue d'avoir l'une des meilleures viandes au monde et d'être à la pointe de la sécurité alimentaire. Le message des industriels de la viande se veut clair et rassurant : " La viande est tracée et contrôlée de la fourche à la fourchette. " Les Français peuvent savourer en paix. Cela tombe bien, nous consommons en moyenne 84 kilos de viande par personne et par an. L'envers du décor est beaucoup moins idyllique. Depuis quelques années, plusieurs rapports des inspecteurs vétérinaires européens, du ministère de l'Agriculture ou encore de la Cour des comptes tirent la sonnette d'alarme. Abattoirs non conformes, carcasses contaminées, prédominance de l'abattage halal et casher pour des raisons économiques, diminution du nombre d'inspections vétérinaires, absence de sanctions. Conséquences ? Des tromperies à répétition, des intoxications alimentaires et des maladies qui peuvent affecter gravement jeunes enfants et personnes âgées. Bon appétit ! dresse un bilan sans concession et vous donne les clés pour mieux choisir votre alimentation.

Bon appétit !

Is the restaurant an ideal total social phenomenon for the contemporary world? Restaurants are key sites for practices of social distinction, where chefs struggle for recognition as stars and patrons insist on seeing and being seen. This text brings together anthropological insights into these postmodern places.

The Restaurants Book

This book explores changes in eating habits in African, Latin American and Asian cities. It reveals—through studies on city dwellers' food practices and representations—the inadequacy of an analytical approach to these changes in terms of Westernization, standardization, transition or convergence towards a widely applicable model. Surveys conducted in cities of the Global South revealed that city dwellers are inventing new forms of eating based on a multitude of local and/or exogenous sources.

Eating in the city

Créé dans l'urgence alimentaire des lendemains de la Seconde Guerre mondiale, l'Institut national de la recherche agronomique (INRA) a été porté par l'idée qu'une recherche scientifique publique sur le pilotage du vivant sous toutes ses déclinaisons était d'une importance majeure pour la reconstruction de la position française dans le monde. Cet ouvrage, fondé sur une documentation originale et des

témoignages d'acteurs, explore les soixante-dix années d'existence de l'institut et met en perspective les interactions entre le scientifique et le politique.

L'histoire de l'Inra, entre science et politique

This electronic version has been made available under a Creative Commons (BY-NC-ND) open access license. In this book, the complexity and the significance of the foods we eat are analysed from a variety of perspectives, by sociologists, economists, geographers and anthropologists. Chapters address a number of intriguing questions: how do people make judgments about taste? How do such judgments come to be shared by groups of people?; what social and organisational processes result in foods being certified as of decent or proper quality? How has dissatisfaction with the food system been expressed? What alternatives are thought to be possible? The multi-disciplinary analysis of this book explores many different answers to such questions. The first part of the book focuses on theoretical and conceptual issues, the second part considers processes of formal and informal regulation, while the third part examines social and political responses to industrialised food production and mass consumption. Qualities of food will be of interest to researchers and students in all the social science disciplines that are concerned with food, whether marketing, sociology, cultural studies, anthropology, human nutrition or economics.

Education for Sustainable Development Goals

Increasingly, consumers in North America and Europe see their purchasing as a way to express to the commercial world their concerns about trade justice, the environment and similar issues. This ethical consumption has attracted growing attention in the press and among academics. Extending beyond the growing body of scholarly work on the topic in several ways, this volume focuses primarily on consumers rather than producers and commodity chains. It presents cases from a variety of European countries and is concerned with a wide range of objects and types of ethical consumption, not simply the usual tropical foodstuffs, trade justice and the system of fair trade. Contributors situate ethical consumption within different contexts, from common Western assumptions about economy and society, to the operation of ethical-consumption commerce, to the ways that people's ethical consumption can affect and be affected by their social situation. By locating consumers and their practices in the social and economic contexts in which they exist and that their ethical consumption affects, this volume presents a compelling interrogation of the rhetoric and assumptions of ethical consumption.

Ethical Consumption

Notre assiette se remplit facilement. D'aliments, de conseils, de recommandations et de tendances. Nous vivons dans une singulière abondance. Les aliments sont partout, mais rarement avons-nous l'occasion d'apprendre ce qu'ils représentent de travail et de sens. La chaîne qui nous relie à la terre s'est allongée, étirée jusqu'à ce qu'il soit impossible d'en voir le début. Même chose pour la mer ; ce qui se pêche dans nos eaux prend la route de l'étranger et des espèces qui croissent ailleurs reviennent dans nos assiettes. Curieux échanges commerciaux faisant voyager vitamines et protéines dans toutes les directions. Nous avons oublié qu'il y a moins de 100 ans, on savait engranger, empoter, conserver. Aurons-nous encore longtemps le luxe de consommer les fruits de l'autre hémisphère toute l'année ? Saurons-nous remettre en valeur terroirs et territoires pour enfin cesser de penser que l'Abitibi ou la Gaspésie sont des « régions éloignées » alors que le Chili et l'Afrique du Sud nous semblent à côté ? Ce livre questionne toutes ces saveurs planétaires standardisées. Il nous dit que l'herbe n'est pas toujours plus verte dans le pré voisin et propose de considérer l'aliment pour ce qu'il est : un lien avec la terre, la mer, et les êtres humains qui capturent, cultivent, transforment... pêchent, jardinent et cuisinent. Il nous invite à nous réconcilier avec les saisons, à nous serrer les coudes autour de la table pour retrouver le plaisir d'être bien... dans nos assiettes. Il se termine par les témoignages de personnalités d'ici sur l'alimentation : Normand Bourgault, Guy Debailleul, Françoise Kayler, Marie Marquis, Ghislain Picard, Claude Villeneuve et Laure Waridel.

Les Livres disponibles

Using a cross-cultural model, the author explores mystifications of economic life, and explains how capital and derivatives can control an economy. The book offers a different conception of economic welfare, development, and freedom.

Goût du monde ou saveurs locales?

Owing to climate change related uncertainties and anticipated population growth, different parts of the developing and the developed world (particularly urban areas) are experiencing water shortages or flooding and security of fit-for-purpose supplies is becoming a major issue. The emphasis on decentralized alternative water supply systems has increased considerably. Most of the information on such systems is either scattered or focuses on large scale reuse with little consideration given to decentralized small to medium scale systems. *Alternative Water Supply Systems* brings together recent research into the available and innovative options and additionally shares experiences from a wide range of contexts from both developed and developing countries. *Alternative Water Supply Systems* covers technical, social, financial and institutional aspects associated with decentralized alternative water supply systems. These include systems for greywater recycling, rainwater harvesting, recovery of water through condensation and sewer mining. A number of case studies from the UK, the USA, Australia and the developing world are presented to discuss associated environmental and health implications. The book provides insights into a range of aspects associated with alternative water supply systems and an evidence base (through case studies) on potential water savings and trade-offs. The information organized in the book is aimed at facilitating wider uptake of context specific alternatives at a decentralized scale mainly in urban areas. This book is a key reference for postgraduate level students and researchers interested in environmental engineering, water resources management, urban planning and resource efficiency, water demand management, building service engineering and sustainable architecture. It provides practical insights for water professionals such as systems designers, operators, and decision makers responsible for planning and delivering sustainable water management in urban areas through the implementation of decentralized water recycling. Authors: Fayyaz Ali Memon, Centre for Water Systems, University of Exeter, UK and Sarah Ward, Centre for Water Systems, University of Exeter, UK

Economy's Tension

Je m'appelle Juan Diego, je suis un Indien aztèque, je suis mort en 1548 et depuis, j'attends. Je m'appelle Nathalie, je vis aujourd'hui, je suis médecin, j'ai quarante ans et je ne crois en rien. Deux personnes peuvent-elles s'entendre, se rejoindre et s'aider à quatre siècles de distance ?

Repère

Things which we regard as the everyday objects of consumption (and hence re-purchase), and essential to any decent, civilised lifestyle, have not always been so: in former times, everyday objects would have passed from one generation to another, without anyone dreaming of acquiring new ones. How, therefore, have people in the modern world become 'prisoners of objects', as Rousseau put it? The celebrated French cultural historian Daniel Roche answers this fundamental question using insights from economics, politics, demography and geography, as well as his own extensive historical knowledge. Professor Roche places familiar objects and commodities - houses, clothes, water - in their wider historical and anthropological contexts, and explores the origins of some of the daily furnishings of modern life. *A History of Everyday Things* is a pioneering essay that sheds light on the origins of the consumer society and its social and political repercussions, and thereby the birth of the modern world.

Alternative Water Supply Systems

Short Creek, Arizona, 1974. Loretta, quinze ans, vit au sein d'une communauté de mormons fondamentalistes et polygames. Le jour, elle se plie à l'austérité des siens, la nuit, elle fait le mur et retrouve son petit ami. Pour mettre un terme à ses escapades nocturnes, ses parents la marient de force à Dean Harder, qui a trente ans de plus qu'elle, une première femme et déjà sept enfants... Loretta se glisse tant bien que mal dans son rôle d'« épouse-sœur », mais continue à rêver d'une autre vie, qu'elle ne connaît qu'à travers les magazines. La chance se présente finalement sous les traits de Jason, le neveu de Dean, fan de Led Zeppelin et du Seigneur des anneaux, qui voue un culte au cascadeur Evel Knievel. C'est le début d'une aventure mémorable aux allures de road trip vers la liberté qui va vite se heurter à la réalité... Un superbe roman, profond et drôle à la fois, qui nous plonge au cœur de la mythologie de l'Ouest américain, tant sacrée que profane.

L'Apparition

How and why did experience and knowledge become separated? Is it possible to talk of an infancy of experience, a "dumb" experience? For Walter Benjamin, the "poverty of experience" was a characteristic of modernity, originating in the catastrophe of the First World War. For Giorgio Agamben, the Italian editor of Benjamin's complete works, the destruction of experience no longer needs catastrophes: daily life in any modern city will suffice. Agamben's profound and radical exploration of language, infancy, and everyday life traces concepts of experience through Kant, Hegel, Husserl and Benveniste. In doing so he elaborates a theory of infancy that throws new light on a number of major themes in contemporary thought: the anthropological opposition between nature and culture; the linguistic opposition between speech and language; the birth of the subject and the appearance of the unconscious. Agamben goes on to consider time and history; the Marxist notion of base and superstructure (via a careful reading of the famous Adorno-Benjamin correspondence on Baudelaire's Paris); and the difference between rituals and games. Beautifully written, erudite and provocative, these essays will be of great interest to students of philosophy, linguistics, anthropology and politics.

A History of Everyday Things

Farmers' markets, veggie boxes, local foods, organic products and Fair Trade goods – how have these once novel, "alternative" foods, and the people and networks supporting them, become increasingly familiar features of everyday consumption? Are the visions of "alternative worlds" built on ethics of sustainability, social justice, animal welfare and the aesthetic values of local food cultures and traditional crafts still credible now that these foods crowd supermarket shelves and other "mainstream" shopping outlets? This timely book provides a critical review of the growth of alternative food networks and their struggle to defend their ethical and aesthetic values against the standardizing pressures of the corporate mainstream with its "placeless and nameless" global supply networks. It explores how these alternative movements are "making a difference" and their possible role as fears of global climate change and food insecurity intensify. It assesses the different experiences of these networks in three major arenas of food activism and politics: Britain and Western Europe, the United States, and the global Fair Trade economy. This comparative perspective runs throughout the book to fully explore the progressive erosion of the interface between alternative and mainstream food provisioning. As the era of "cheap food" draws to a close, analysis of the limitations of market-based social change and the future of alternative food economies and localist food politics place this book at the cutting-edge of the field. The book is thoroughly informed by contemporary social theory and interdisciplinary social scientific scholarship, formulates an integrative social practice framework to understand alternative food production-consumption, and offers a unique geographical reach in its case studies.

Goodbye, Loretta

The value of Winnicott's work has become more and more widely recognized not only among psychoanalysts but also psychologists, educators, social workers, and men and women in every branch of medicine; indeed, all whose work or practice involves the care of children in health or sickness. An important part of the value of these writings lies in the uniquely binocular view with which the author regards the subjects of his investigation. With him, pediatrics informs psycho-analysis; psycho-analysis illuminates pediatrics. This book is not concerned with innovation in basic psychoanalytic concepts or techniques, but with the formulation and testing-out of ideas whose origin was in the challenge of day-to-day clinical work that was the staple of Winnicott's medical experience throughout his

professional life. This book is arranged in three sections. The first represents Winnicott's attitudes as a pediatrician prior to training in psycho-analysis, and demonstrates the degree to which a purely formal pediatric approach requires as an effective complement a deeper understanding of the emotional problems of child development.

Infancy and History

Janet Carsten offers an original and very personal investigation of the nature of kinship in Malaysia, based upon her own experience as a foster daughter in a family on the island of Langkawi. She shows that Malay kinship is a process, not a state: it is determined partly by birth, but also throughout life by living together and sharing food. Carsten gives the reader a fascinating "anthropology of everyday life," including a compelling view of gender relations; she urges reassessment of recent anthropological work on gender, and a new approach to the study of kinship.

Alternative Food Networks

Includes, 1982-1995: *Les Livres du mois*, also published separately.

Real Men Don't Eat Quiche

Political Consumerism captures the creative ways in which consumers and citizens turn to the market as their arena for politics. This book theorizes, describes, analyzes, compares, and evaluates how political consumers target corporations to solve globalized problems. It demonstrates the reconfiguration of civic engagement, political participation, and citizenship. Unlike other studies, this book also evaluates if and how consumer actions are or can become effective mechanisms of global change.

Through Paediatrics to Psychoanalysis

This publication offers a framework for the empowerment of people living in poverty throughout the world that concentrates on increasing people's freedom of choice and action to shape their own lives. Based on analysis of practical experiences, the book identifies four key elements to support empowerment: information, inclusion and participation, improved accountability and local organisational capacity. This framework is then applied to five areas of action to improve development effectiveness: provision of basic services, improved local governance, improved national governance, pro-poor market development, and access to justice and legal aid. It also offers twenty 'tools and practices' which concentrate on a wide-range of topics to support the empowerment of the poor.

The Heat of the Hearth

This edited volume presents and reflects upon empirical evidence of 'sustainability'-induced and -related transition in food practices. The material collected in the various chapters contributes to our understanding of the ways in which ideas and preferences, sociotechnological developments and changes in the governance of food interact and become visible in practices of consumption, retail and production.

Livres de France

The powerful new novel from the award-winning author of 'Eve Green' and 'Oystercatchers' is a tale of love and the lore of the sea.

Néo

There are hundreds of empirical studies finding evidence of tax-motivated profit shifting, using different data sources and estimation strategies. While measuring the scope of BEPS is challenging given its complexity and existing data limitations, a number of recent studies suggest that BEPS is responsible for significant global corporate income tax (CIT) revenue losses. This report assesses currently available data and concludes that significant limitations severely constrain economic analyses of the scale and economic impact of BEPS and improved data and methodologies are required. Noting these data limitations, a dashboard of six BEPS indicators has been constructed, using different data sources and assessing different BEPS channels. These indicators provide evidence that BEPS exists and has been increasing over time. New empirical analysis estimates that the scale of global CIT revenue losses could be between USD 100 and 240 billion annually at 2014 levels. The report also presents

a toolkit to assist countries evaluate the fiscal effects of BEPS countermeasures. The research also finds significant non-fiscal economic distortions arising from BEPS. The report concludes by making recommendations regarding data and monitoring tools to improve the analysis of BEPS in the future

Political Consumerism

This book equips readers with the knowledge required to improve diagnosis and treatment and to implement integrated prevention programs in patients with eating and weight disorders. It does so by providing a comprehensive, up-to-date review of research findings and theoretical assumptions concerning the interface and interactions between body image and such disorders as anorexia nervosa, bulimia nervosa, binge eating disorder, other specified feeding and eating disorders, orthorexia nervosa, overweight, and obesity. After consideration of issues of definition and classification, the opening part of the book examines the concept of body image from a variety of viewpoints. A series of chapters are then devoted to the assessment of the multidimensional construct "body image", to dysmorphophobia/body dysmorphic disorder, and to muscle dysmorphia. The third part discusses body image in people suffering from different eating disorders and/or overweight or obesity, and two final chapters focus on body image in the integrated prevention of eating disorders and obesity, and cultural differences regarding body image. The book will be of interest to all health professionals who work in the fields of psychiatry, clinical psychology, eating disorders, obesity, body image, adolescence, public health, and prevention.

Point de repère

This provocative book stands our sixties' liberation on its head, taking an inventory of its unintended side-effects.--Le Nouvel Quotidien. (Philosophy)

Coffee with a Cause

The epic history of consumption, and the goods that have transformed our lives over the past 600 years. What we consume has become the defining feature of our lives: our economies live or die by spending, we are treated more as consumers than workers, and even public services are presented to us as products in a supermarket. In this monumental study, acclaimed historian Frank Trentmann unfolds the extraordinary history that has shaped our material world, from late Ming China, Renaissance Italy and the British Empire to the present. Astonishingly wide-ranging and richly detailed, *Empire of Things* explores how we have come to live with so much more, how this changed the course of history, and the global challenges we face as a result.

Empowerment and Poverty Reduction

Music criticism has played a fundamental and influential role throughout music history, with numerous composers such as Berlioz, Schumann, and Wagner, as well as many contemporary musicians, also maintaining careers as writers and critics. The *Cambridge History of Music Criticism* goes beyond these better-known accounts, reaching back to medieval times, expanding the geographical reach both within and beyond Europe, and including key issues such as women and criticism of recordings, as well as the story of criticism in jazz, popular music and world music. Drawing on a blend of established and talented young scholars, this is the first substantial historical survey of music criticism and critics, bringing unprecedented scope to a rapidly expanding area of musicological research. An indispensable point of reference, *The Cambridge History of Music Criticism* provides a broad historical overview of the field while also addressing specific issues and events.

Food Practices in Transition

In contemporary life, the marketplace has emerged as an important arena for the practice of politics. Concerns about personal and family well-being as well as ethical or political assessment of favorable and unfavorable business and government practices become part and parcel of the marketplace of politics. This volume describes this phenomenon as political consumerism, reflecting an understanding of politics as a product embedded in a complex social and normative context. *Politics, Products, and Markets* is the first general study of political consumerism. It asks fundamental questions, including what is new and what is old about the phenomenon. The authors discuss the mediating role of political consumerism in the problematic relationship between markets and morality. They explore whether institutional arrangements have been developed to permit consumers and producers to assume ethical

responsibility for their choices and behavior. They ask why political consumerism is presently on the rise. And they investigate the relationship between globalization and political consumerism. Part 1, "Making Money Morally," discusses how political consumerism challenges the perceived division between private interests pursued by private actors in the market and public interests pursued through political means. Part 2, "Consumer Choices and Setting of the Agenda of Politics," contains examples of how political consumerism sets the agenda of politics and discusses its democratic quality. Part 3, "Building Responsible Institutions in Multi-Risk Society," has as its central theme the development of new political consumer institutions. Part 4, "Politicizing Consumers and Change in Politics," studies the characteristics of political consumers and raises the question of whether political consumerism really is politics. This volume will be of interest to social scientists, social activists, and policy institutes.
