The Oxford Companion to Archaeology

When we think of archaeology, most of us think first of its many spectacular finds: the legendary city of Troy, Tutankhamun's golden tomb, the three-million-year-old footprints at Laetoli, the mile-high city at Machu Picchu, the cave paintings at Lascaux. But as marvelous as these discoveries are, the ultimate goal of archaeology, and of archaeologists, is something far more ambitious. Indeed, it is one of humanity's great quests: to recapture and understand our human past, across vast stretches of time, as it was lived in every corner of the globe. Now, in *The Oxford Companion to Archaeology*, readers have a comprehensive and authoritative overview of this fascinating discipline, in a book that is itself a rare find, a treasure of up-to-date information on virtually every aspect of the field. The range of subjects covered here is breathtaking--everything from the domestication of the camel, to Egyptian hieroglyphics, to luminescence dating, to the Mayan calendar, to Koobi Fora and Olduvai Gorge. Readers will find extensive essays that illuminate the full history of archaeology--from the discovery of Herculaneum in 1783, to the recent finding of the "Ice Man" and the ancient city of Uruk--and engaging biographies of the great figures in the field, from Gertrude Bell, Paul Emile Botta, and Louis and Mary Leakey, to V. Gordon Childe, Li Chi, Heinrich Schliemann, and Max Uhle. The Companion offers extensive coverage of the methods used in archaeological research, revealing how archaeologists find sites (remote sensing, aerial photography, ground survey), how they map excavations and report findings, and how they analyze artifacts (radiocarbon dating, dendrochronology, stratigraphy, mortuary analysis). Of course, archaeology's great subject is humanity and human culture, and there are broad essays that examine human evolution--ranging from our early primate ancestors, to *Australopithecus* and *Cro-Magnon*, to *Homo Erectus* and Neanderthals--and explore the many general facets of culture, from art and architecture, to arms and armor, to beer and brewing, to astronomy and religion. And perhaps most important, the contributors provide insightful coverage of human culture as it has been expressed in every region of the world. Here entries range from broad overviews, to treatments of particular themes, to discussions of peoples, societies, and particular sites. Thus, anyone interested in North America would find articles that cover the continent from the Arctic to the Eastern woodlands to the Northwest Coast, that discuss the Iroquois and Algonquian cultures, the hunters of the North American plains, and the Norse in North America, and that describe sites such as Mesa Verde, Meadowcroft Rockshelter, Serpent Mound, and Poverty Point. Likewise, the coverage of Europe runs from the Paleolithic period, to

the Bronze and Iron Age, to the Post-Roman era, looks at peoples such as the Celts, the Germans, the Vikings, and the Slavs, and describes sites at Altamira, Pompeii, Stonehenge, Terra Amata, and dozens of other locales. The Companion offers equally thorough coverage of Africa, Europe, North America, Mesoamerica, South America, Asia, the Mediterranean, the Near East, Australia and the Pacific. And finally, the editors have included extensive cross-referencing and thorough indexing, enabling the reader to pursue topics of interest with ease; charts and maps providing additional information; and bibliographies after most entries directing readers to the best sources for further study. Every Oxford Companion aspires to be the definitive overview of a field of study at a particular moment of time. This superb volume is no exception. Featuring 700 articles written by hundreds of respected scholars from all over the world, The Oxford Companion to Archaeology provides authoritative, stimulating entries on everything from bog bodies, to underwater archaeology, to the Pyramids of Giza and the Valley of the Kings.

The Oxford Companion to Archaeology

When we think of archaeology, most of us think first of its many spectacular finds: the legendary city of Troy, Tutankhamun's golden tomb, the three-million-year-old footprints at Laetoli, the mile-high city at Machu Picchu, the cave paintings at Lascaux. But as marvelous as these discoveries are, the ultimate goal of archaeology, and of archaeologists, is something far more ambitious. Featuring 700 articles written by hundreds of respected scholars from all over the world, The Oxford Companion to Archaeology provides authoritative, stimulating entries on everything from bog bodies, to underwater archaeology, to the Pyramids of Giza and the Valley of the Kings.

The Oxford Companion to Archaeology

'The Oxford Companion to Archaeology' is an up-to-date reference work on virtually every aspect of this fascinating field. Entries range from the broad overviews, to treatments of particular themes, to discussions of peoples, and societies.

The Oxford Companion to Archaeology

This companion to Scottish history covers subjects including archaeology, architecture, climate, culture, folk belief, geology, and the languages of Scotland. It ranges over 20 centuries of history, and extends from Orkney to the Borders.

The Oxford Companion to Archaeology

Illustrated with full-color plates and 140 black-and-white pictures, an encyclopedic, exhaustive, and up-to-date guide contains finely detailed articles and short reference notes on the people, places, and events that shaped ancient Western civilization. UP.

The Oxford companion to archaeology. 1. Ache-Hoho

Real understanding of past societies is not possible without including children, and yet they have been strangely invisible in the archaeological record. Compelling explanation about past societies cannot be achieved without including and investigating children and childhood. However marginal the traces of children's bodies and bricolage may seem compared to adults, archaeological evidence of children and childhood can be found in the most astonishing places and spaces. The archaeology of childhood is one of the most exciting and challenging areas for new discovery about past societies. Children are part of every human society, but childhood is a cultural construct. Each society develops its own idea about what a childhood should be, what children can or should do, and how they are trained to take their place in the world. Children also play a part in creating the archaeological record itself. In this volume, experts from around the world ask questions about childhood - thresholds of age and growth, childhood in the material culture, the death of children, and the intersection of the childhood and the social, economic, religious, and political worlds of societies in the past.

The Oxford Companion to Scottish History

The Middle Ages are all around us in Britain. The Tower of London and the castles of Scotland and Wales are mainstays of cultural tourism and an inspiring cross-section of later medieval finds can now be seen on display in museums across England, Scotland, and Wales. Medieval institutions from Parliament and monarchy to universities are familiar to us and we come into contact with the later Middle Ages every day when we drive through a village or town, look up at the castle on the hill, visit a local church or wonder about the earthworks in the fields we see from the window of a train. The Oxford Handbook of Later Medieval Archaeology in Britain provides an overview of the archaeology of the later Middle Ages in Britain between AD 1066 and 1550. 61 entries, divided into 10 thematic sections, cover topics ranging from later medieval objects, human remains, archaeological science, standing buildings, and sites such as castles and monasteries, to the well-preserved relict landscapes which still survive. This is a rich and exciting period of the past and most of what we have learnt about the material culture of our medieval past has been discovered in the past two generations. This volume provides comprehensive coverage of the latest research and describes the major projects and concepts that are changing our understanding of our medieval heritage.

The Oxford Companion to Classical Civilization

This Handbook is the first comprehensive survey of a rapidly expanding sub-field in archaeology, the study of the present and recent past. It seeks to explore the boundaries of this emerging area, to develop a tool-kit of concepts and methods, which are applicable to this new sub-field, and to suggest important future trajectories for research.

The Oxford Handbook of the Archaeology of Childhood

Here is the essential reference book for anyone with an interest in British history. Drawing on the latest scholarship, over 100 contributors describe and analyse people and events that have shaped and defined life in Britain over 2000 years. This edition is revised and updated to extend the coverage.

The Oxford Handbook of Later Medieval Archaeology in Britain

Covers such topics as plant products, cooking terms, national and regional cuisines, food preservation, food science, diet, and cookbooks and their authors.

The Oxford Handbook of the Archaeology of the Contemporary World

The Oxford Handbook of Public Archaeology seeks to reappraise the place of archaeology in the contemporary world by providing a series of essays that critically engage with both old and current debates in the field of public archaeology. Divided into four distinct sections and drawing across disciplines in this dynamic field, the volume aims to evaluate the range of research strategies and methods used in archaeological heritage and museum studies, identify and contribute to key contemporary debates, critically explore the history of archaeological resource management, and question the fundamental principles and practices through which the archaeological past is understood and used today.

The Oxford Companion to British History

This authoritative work, the first comprehensive study of its kind, traces the evolving archaeological scenario of the Indian subcontinent, area by area, phase by phase, from prehistory to the thirteenth century AD. Using a wide variety of sources, distinguished scholar Dilip K. Chakrabarti provides an in-depth multi-layered archaeological chronicle of the subcontinent.

The Oxford Companion to Food

'The Oxford Handbook of Neolithic Europe' provides a comprehensive, geographically extensive, thematic overview of the European Neolithic - from Iberia to Russia and from Norway to Malta - offering both a general introduction and a clear exploration of key issues and current debates surrounding evidence and interpretation.

The Oxford Handbook of Public Archaeology

Written by a team of experts and presenting the results of the most up-to-date research, The Handbook of Anglo-Saxon Archaeology will both stimulate and support further investigation into a society poised at the interface between prehistory and history.

The Oxford Companion to Indian Archaeology

Twenty years in the making, the first edition of Alan Davidson's magnum opus appeared in 1999 to worldwide acclaim. Its combination of serious food history, culinary expertise, and entertaining serendipity was recognized as utterly unique. Including both an exhaustive catalogue of the foods that nourish humankind-fruit from tropical forests, mosses scraped from adamantine granite in Siberian wastes, or ears, eyeballs and testicles from a menagerie of animals-and a richly allusive commentary on the culture of food, whether expressed in literature and cookbooks, or as dishes peculiar to a country or community, the Oxford Companion to Food immediately found distinction. The study of food and food history was a new discipline at the time, but one that has developed exponentially in the years since. There are now university departments, international societies, and academic journals, in addition to a wide range of popular literature exploring the meaning of food in the daily lives of people around the world. Alan Davidson famously wrote eighty percent of the first edition, which was praised for its wit as well as its wisdom. Tom Jaine, the editor of the second edition, worked closely with Jane Davidson and Helen Saberi to ensure that new contributions continue in the same style. The result is an expanded volume that remains faithful to Davidson's peerless work. The text has been updated where necessary to keep pace with a rapidly changing subject, and Jaine assiduously alerts readers to new avenues in food studies. Agriculture; archaeology; food in art, film, literature, and music; globalization; neuroanatomy; and the Silk Road are covered for the first time, and absorbing new articles on confetti; cutlery; doggy bags; elephant; myrrh; and potluck have also found their way into the Companion.

The Oxford Handbook of Neolithic Europe

This is the most authoritative and engaging philosophical reference work in English. It gives clear and reliable guidance to all areas of philosophy and to the ideas of all notable philosophers from antiquity to the present day. The scope of the volume is not limited to English-language philosophy: it surveys the foremost philosophy from all parts of the world. A distinguished international assembly of more than two hundred contributors provide almost 2,000 alphabetically arranged entries which

are not only instructive but also entertaining: they combine learning, lucidity, elegance, and wit. There are more than fifty extended entries of 3,000 words on the main areas of philosophy and the great philosophers: these include essays by Alasdair MacIntyre on the history of moral philosophy, Paul Feyerabend on the history of the philosophy of science, Jaegwon Kim on problems of the philosophy of mind, Richard Swinburne on problems of the philosophy of religion, David Charles on Aristotle, Peter Singer on Hegel, Anthony Kenny on Frege, and Anthony Quinton on philosophy itself. Short entries deal with key concepts (for instance, personal identity, time) doctrines (utilitarianism, holism), problems (the mind-body problem, the meaning of life), schools of thought (Marxist philosophy, the Vienna Circle), and practical issues (abortion, vegetarianism). Individual thinkers past (Pythagoras, Confucius, Galileo, Goethe, Burke, Santayana, de Beauvoir, Radhakrishnan) and present (over 150 contemporary figures, such as Chomsky, Derrida, and Popper) are profiled, and eighty of them are depicted in black-and-white portraits. Interspersed throughout are short explanations of particular philosophical terms (qualia, supervenience, iff), puzzles (the Achilles paradox, the prisoner's dilemma), and curiosities (the philosopher's stone, slime). Every entry is accompanied by suggestions for further reading. A chronological chart of the history of philosophy is located at the end of the book, together with fourteen diagrams showing the structure of philosophy and the relations between its subjects and doctrines. This book will be an indispensable guide and a constant source of stimulation and enlightenment for anyone interested in abstract thought, the eternal questions, and the foundations of human understanding.

The Oxford Handbook of Anglo-Saxon Archaeology

This book provides a twenty-first century perspective on Roman Britain, combining current approaches with the wealth of archaeological material from the province. This volume introduces the history of research into the province and the cultural changes at the beginning and end of the Roman period. The majority of the chapters are thematic, dealing with issues relating to the people of the province, their identities and ways of life. Further chapters consider the characteristics of the province they lived in, such as the economy, and settlement patterns. This Handbook reflects the new approaches being developed in Roman archaeology, and demonstrates why the study of Roman Britain has become one of the most dynamic areas of archaeology. The book will be useful for academics and students interested in Roman Britain.

The Oxford Companion to Food

This volume draws together topics and methodologies essential for the socio-cultural, mineralogical, and geochemical analysis of archaeological ceramic, one of the most complex and ubiquitous archaeomaterials in the archaeological record. It provides an invaluable resource for archaeologists, anthropologists, and archaeological materials scientists.

The Oxford Companion to Philosophy

'With its appearance in 1998 the Oxford Companion set a benchmark among reference works on Irish history for accuracy, comprehensiveness, and scholarly detail. Since then Irish history, politics, and culture have continued to develop and transform themselves, and the new edition admirably extends its team of contributors to broaden the coverage of art, literature, archaeology, and material culture as well as contemporary writing and current politics. It re-emerges more indispensable than ever.' Roy Foster, Carroll Professor of Irish History, University of Oxford, and author of the acclaimed biography of W. B. Yeats 'A companion to be cherished', 'judicious and authoritative', 'excellent work', 'informative and entertaining', these are just some of the phrases used by reviewers describing the first edition of The Oxford Companion to Irish History, published in hardback in 1998. 'A rewarding read', 'marvellous companion', and 'invaluable work of reference' echo the reviewers of the second edition. The history of Ireland has long been a topic at the forefront of debate and one that continues to raise emotions and be the cause of much dispute. It is astonishing that such a small area of land has had one of the most controversial yet fascinating histories of any country in the world. Interest in Irish culture, politics, and society, both ancient and modern, never seems to falter, not only in scholarly circles but also among the general public. With over 1,800 entries, the Companion offers a comprehensive and authoritative guide to all aspects of the Irish past from earliest times to the present day. There is coverage not only of leading political figures, organizations, and events but also of subjects such as dress, music, sport, and diet. Traditional topics such as the rebellion of 1798 and the Irish Civil War sit alongside entries on newly developing areas such as women's history and popular culture. The editor, Sean Connolly, with the help

of the existing 87 contributors and a small number of new contributors, has updated and revised the text for this second edition to take into account recent research and events. The coverage has been expanded to offer a fuller treatment of prehistoric and early historic Ireland and more comprehensive information on literary history. There are also new entries on individuals who have died since the first edition was published. In addition the sections dealing with politics in the Irish Republic and in Northern Ireland have been rewritten to take full account of developments up to the end of the 20th century. New / rewritten entries include: Visual Arts (art schools, ceramics, furniture, history painting, painting, sculpture) Politics / Religion (Brendan Corish, James Dillon, Sean MacDermott, Alfred O'Rahilly, peace process, Progressive Democrats, Michael Tierney, Workers' Party) Literature (Dun Emer Press, Lady Augusta Gregory, James Joyce, George Bernard Shaw, Lady Jane ('Speranza') Wilde) Prehistoric and Early Ireland (Bronze Age Ireland, Celtic Ireland, crannog, La Tene in Ireland, Mesolithic Ireland, Neolithic Ireland, rath) Medieval Ireland (fuidir, MacCarthy, O'Brien, O'Donnell, sencheithe, sept) Other (agriculture, Devon Commission, John Henry Newman, Ulster Scots) In addition to A-Z entries the Companion includes a section of maps showing the shape of modern Ireland, post-reformation ecclesiastical divisions in Ireland, political divisions circa 800, Ireland circa 1350, Ireland in the late 15th century, and the pattern of transport and communications in Ireland. There is also a subject index, which groups headwords into thematic batches to provide an alternative way to access the entries. This second edition of the Companion, continuing on from the original, will be valuable to different people for different uses. It will be of particular use to students as a work of general reference and to the general public with an interest in the history and culture of Ireland. But it should also have appeal to academics, both for the longer analytical entries and as a source of reference for topics outside of their immediate area of expertise.

The Oxford Handbook of Roman Britain

This handbook provides an authoritative guide to the full range of archaeological activities past and present. It will give the reader a sense of the history of the subject and of the main theoretical debates, as well as a taste of the excitement generated by archaeological exploration.

The Oxford Handbook of Archaeological Ceramic Analysis

A comprehensive overview, by period and region, of the archaeology of ritual and religion. The coverage is global, and extends from the earliest prehistory to modern times. Written by over sixty renowned specialists, the Handbook presents the very best in current scholarship, and will also stimulate further research.

The Oxford Companion to Irish History

Archaeology is a vast subject - it is the study of human society everywhere in the world, from distant human origins 3-4 million years ago up to the present day. The Oxford Handbook of Archaeology brings together 35 authors - all specialists in their own fields - to explain what archaeology is really about. This is one of the most comprehensive treatments of the subject and of the key debates ever attempted. It is designed to open up the world of archaeology to non-specialists and to provide an essential starting point for those who want to pursue particular topics in more depth.

The Oxford Handbook of Archaeology

This Handbook sets out the key issues and debates in the theory and practice of wetland archaeology which has played a crucial role in studies of our past. Due to the high quantity of preserved organic materials found in humid environments, the study of wetlands has allowed archaeologists to reconstruct people's everyday lives in great detail.

The Oxford Handbook of the Archaeology of Ritual and Religion

This handbook is currently in development, with individual articles publishing online in advance of print publication. At this time, we cannot add information about unpublished articles in this handbook, however the table of contents will continue to grow as additional articles pass through the review process and are added to the site. Please note that the online publication date for this handbook is the date that the first article in the title was published online.

The Oxford Handbook of Archaeology

Light plays a crucial role in mediating relationships between people, things, and spaces, yet lightscares have been largely neglected in archaeology study. This volume offers a full consideration of light in archaeology and beyond, exploring diverse aspects of illumination in different spatial and temporal contexts from prehistory to the present.

The Oxford Handbook of Wetland Archaeology

This title provides comprehensive overviews on archaeological philological, linguistic, and historical issues at the forefront of Anatolian scholarship in the 21st century.

The Oxford Handbook of the Archaeology of Roman Germany

"The past has left a huge variety of traces in material form. If historians could figure out how to make use of them to create accounts of the past, a far greater range of histories would be available than if historians were to rely on written sources alone. People who do not appear in writings could come into focus; as could the concerns of people that have escaped writing but whose material things belie their desires and actions. This book explores various ways in which aspects of the past of peoples in many times and places otherwise inaccessible can come alive to the material culture historian. It is divided into five thematic sections that address history, material culture, and-respectively-cognition, technology, symbolism, social distinction, and memory. It does so by means of six individually authored case studies in each section that range from pins to pearls, Paleolithic to Punk"--

The Oxford Handbook of Light in Archaeology

"Essays cover major historical trends and figures, discuss jazz in different countries, review the role of most instruments and consider the place of jazz in other arts, like dance, literature and film." N.Y. Times Book Rev. "This work is an effective single-volume device, leading current listeners to the music while including enough newer scholarship to retain the interest of connoisseurs." Libr J.

The Oxford Handbook of Ancient Anatolia

The Oxford Handbook of the European Bronze Age is a wide-ranging survey of a crucial period in prehistory during which many social, economic, and technological changes took place. Written by expert specialists in the field, the book provides coverage both of the themes that characterize the period, and of the specific developments that took place in the various countries of Europe. After an introduction and a discussion of chronology, successive chapters deal with settlement studies, burial analysis, hoards and hoarding, monumentality, rock art, cosmology, gender, and trade, as well as a series of articles on specific technologies and crafts (such as transport, metals, glass, salt, textiles, and weighing). The second half of the book covers each country in turn. From Ireland to Russia, Scandinavia to Sicily, every area is considered, and up to date information on important recent finds is discussed in detail. The book is the first to consider the whole of the European Bronze Age in both geographical and thematic terms, and will be the standard book on the subject for the foreseeable future.

The Oxford Handbook of History and Material Culture

This Oxford handbook provides a comprehensive overview of our current understanding of the Bronze Age Aegean (ca. 3000-1000 BC) and describes the most important debates and discussions within the discipline. 66 articles in 4 sections cover topics ranging from chronological and geographical to thematic to site-specific.

The Oxford Companion to Jazz

This Handbook offers an overview of the archaeology of the Levant. Written by leading scholars in the field, it integrates the treatment of the archaeology of the region within its larger cultural and social context and focuses chronologically on the Neolithic through to the Persian periods.

The Oxford Handbook of the European Bronze Age

The Bible has had an immeasurable influence on Western culture, touching on virtually every aspect of our lives. It is one of the great wellsprings of Western religious, ethical, and philosophical traditions. It has been an endless source of inspiration to artists, from classic works such as Michaelangelo's Last Judgment, Handel's Messiah, or Milton's Paradise Lost, to modern works such as Thomas Mann's

Joseph and His Brothers or Martin Scorsese's controversial *Last Temptation of Christ*. For countless generations, it has been a comfort in suffering, a place to reflect on the mysteries of birth, death, and immortality. Its stories and characters are an integral part of the repertoire of every educated adult, forming an enduring bond that spans thousands of years and embraces a vast community of believers and nonbelievers. The *Oxford Companion to the Bible* provides an authoritative one-volume reference to the people, places, events, books, institutions, religious belief, and secular influence of the Bible. Written by more than 250 scholars from some 20 nations and embracing a wide variety of perspectives, the Companion offers over seven hundred entries, ranging from brief identifications--who is Dives? where is Pisgah?--to extensive interpretive essays on topics such as the influence of the Bible on music or law. Ranging far beyond the scope of a traditional Bible dictionary, the Companion features, in addition to its many informative, factual entries, an abundance of interpretive essays. Here are extended entries on religious concepts from immortality, sin, and grace, to baptism, ethics, and the Holy Spirit. The contributors also explore biblical views of modern issues such as homosexuality, marriage, and anti-Semitism, and the impact of the Bible on the secular world (including a four-part article on the Bible's influence on literature). Of course, the Companion can also serve as a handy reference, the first place to turn to find factual information on the Bible. Readers will find fascinating, informative articles on all the books of the Bible--including the Apocrypha and many other ancient texts, such as the Dead Sea Scrolls, Pseudepigrapha, and the Mishnah. Virtually every figure who walked across the biblical stage is identified here, ranging from Rebekah, Rachel, and Mary, to Joseph, Barabbas, and Jesus. The Companion also offers entries that shed light on daily life in ancient Israel and the earliest Christian communities, with fascinating articles on feasts and festivals, clothing, medicine, units of time, houses, and furniture. Finally, there are twenty-eight pages of full-color maps, providing an accurate, detailed portrait of the biblical world. A vast compendium of information related to scriptures, here is an ideal complement to the Bible, an essential volume for every home and library, the first place to turn for information on the central book of Western culture.

The Oxford Handbook of the Bronze Age Aegean

In this volume that is as big and as varied as the nation it portrays are over 1,400 entries written by some 900 historians and other scholars, illuminating not only America's political, diplomatic, and military history, but also social, cultural, and intellectual trends; science, technology, and medicine; the arts; and religion.

The Oxford Handbook of the Archaeology of the Levant

The Oxford Handbook of North American Archaeology reviews the continent's first and last foragers, farmers, and great pre-Columbian civic and ceremonial centers, from Chaco Canyon to Moundville and beyond.

The Oxford Companion to the Bible

The Oxford Handbook of Prehistoric Figurines is the first text to offer a comparative survey of figurines from across the globe, bringing together myriad contemporary research approaches to provide invaluable insights into their function, context, meaning, and use, as well as past thinking on the human body, gender, and identity.

The Oxford Companion to United States History

The Oxford Handbook of the European Iron Age presents a broad overview of current understanding of the archaeology of Europe from 1000 BC through to the early historic periods, exploiting the large quantities of new evidence yielded by the upsurge in archaeological research and excavation on this period over the last thirty years. Three introductory chapters situate the reader in the times and the environments of Iron Age Europe. Fourteen regional chapters provide accessible syntheses of developments in different parts of the continent, from Ireland and Spain in the west to the borders with Asia in the east, from Scandinavia in the north to the Mediterranean shores in the south. Twenty-six thematic chapters examine different aspects of Iron Age archaeology in greater depth, from lifeways, economy, and complexity to identity, ritual, and expression. Among the many topics explored are agricultural systems, settlements, landscape monuments, iron smelting and forging, production of textiles, politics, demography, gender, migration, funerary practices, social and religious rituals, coinage and literacy, and art and design.

Let's Learn 14,867 views 3 years ago 32 minutes - This demonstration shows how to create a Ethernet

based application on **Microblaze**, processor using FreeRTOS operating ...

adding in the ip integrator during the hardware definition stage

developing the application software for running on the microblaze processor

using the ac701 evaluation board

configure a maximum of 128 k of ram

configuring your memory interface generator

fill the pin numbers of the fpga

create the memory interface

add our microplace processor

run the application from the local memory within the fpga

add our peripherals

connect the axi signals to the axi interconnect

add the rest of the peripherals

add the ethernet controller

add the dma controller

connect the interrupt outputs of each of the peripheral

connect each of these interrupt lines

connect the timer

need to create a stl wrapper for your entire hardware
create the stl wrappers
added all the peripherals
include the bitstream
create the application program for running on the microplace processor
assign a static ip address
select the lwip library
connect the ethernet connection of the evaluation board to your pc
configuring the the ip address of the evaluation board
assign an ip address to your pc's ethernet port
select the usb to serial converter of the ac701 board
configured the link with 1gbps speed
