Surgery and Diseases of the Mouth and Jaws

Excerpt from *Surgery and Diseases of the Mouth and Jaws: A Practical Treatise on the Surgery and Diseases of the Mouth and Allied Structures* In spite of all of the special work that has been done in the study of the teeth and allied structures, the ordinary standard of surgical treatment given to diseases and deformities of the mouth does not equal that attained in other regions. This is due largely to a rather general lack of reciprocity of ideas and observations between constructive workers in the medical, with those of the dental professions. It was with the hope of presenting their more pertinent observations and deductions in a coordinated scheme that the present work was undertaken. This attempt has been made-possible by the untiring efforts that the author's many associates in the dental profession have always made to help him solve cases that contained dental problems. For the benefit of his dental students certain chapters on surgical pathology and surgical principles have been included. As hemorrhage is often a serious matter in mouth operations, this has been considered at some length. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. This is a reproduction of a book published before 1923. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. We appreciate your understanding of the imperfections in the preservation process, and hope you enjoy this valuable book.

Surgery and Diseases of the Mouth and Jaws

Excerpt from *Surgery and Diseases of the Mouth and Jaws: A Practical Treatise on the Surgery and Diseases of the Mouth and Allied Structures* No surgical truth has received greater emphasis in this war than the necessity of correlating the skill and the knowledge of the general and the dental surgeons in the treatment of the combined injuries of the face and the jaw bones. An eminent authority on military surgery said, after the war of 1870-71: "I should not care to go through another campaign without having obtained competent technical assistance for those who have sustained injury of the face and fractured jaw." The present revision is mostly confined to the parts related to injury and sepsis and their treatment, and was done by the Section of Surgery of the Head, Subsection of Plastic and Oral Surgery, as an expeditious method of giving, in a correlated form, the sum of the observations of the many workers abroad, to whose reports and recommendations, published, written and verbal, this section had access. These were put forth in this form because, on the one hand, time did not permit of a full exposition of the subject in a special manual: while on the other, it would be of less utility and somewhat awkward to attempt to present these observations while disregarding the well-established principles upon which they are based. The subject of periodontal infections has been rewritten by Dr. Arthur D. Black, of Chicago, and read by Dr. Thomas L. Gilmer, Most of the illustrations were furnished by Dr. Black. The chapter on local anesthesia has been revised by the original author, and that on general anesthesia by Dr. Ellis Fischel. Because of insufficient time, the other chapters, not referred to in this preface, were not revised. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. SURGERY & DISEASES OF THE MOUT

Excerpt from A Treatise on the Diseases and Surgery of the Mouth, Jaws and Associate Parts In the fulfillment of many promises made from time to time to his students and other friends, the author has prepared the following pages, as embodying the results of his observations and experiences during a somewhat extended practice in that branch of the profession to which it specially relates. With the hope that the volume will be a useful text-book in assisting the student to prepare for the responsible duties of the profession, and a reliable guide to the intelligent practitioner, it is herewith offered to the attention both of those who are about to enter the field of their labors and of those who, though more familiar with the practical duties thereof, may desire to acquaint themselves more fully with the latest methods of practice. A Treatise on the Diseases and Surgery of the Mouth, Jaws and Associate Parts

Excerpt from A System of Oral Surgery: Being a Consideration of the Diseases and Surgery of the Mouth, Jaws, and Associate Parts Since the issue of the previous work - a period of rather more than two years having elapsed - the author has devoted himself somewhat exclusively to investigation and Observation in the-direction of the specialty herein discussed. Favored happily with opportunities not commonly enjoyed both in the direction of hospital and of private practice, he may not but feel satisfied of the value and solidity of the experiences and teachings here recorded. The present volume has been entitled A system: a system the author has exerted himself to make it; step by step, from the elements of the subject - from the first departures from normal life - attempt has been made to follow the various conditions to and through their profoundest complications. A Treatise on the Diseases and Surgery of the Mouth, Jaws and Associate Parts (Classic Reprint)

Excerpt from A Text-Book of Surgical Principles and Surgical Diseases of the Face, Mouth, and Jaws, for Dental Students It is the object of this work to present to the student of dentistry a text-book that will succinctly explain the principles of dental surgery applicable to all operative procedures, and also to discuss such surgical lesions as are likely to require diagnosis and perhaps treatment by the dentist. It is believed that only such details as belong to a technical understanding of the subject are in place in a book of this scope. An exhaustive analysis of the phenomena of inflammation and repair, as well as of the pathology of the essential processes of acute surgical diseases, is not desired by the student of dentistry during his college days, and the majority make no effort to acquire more than a clear understanding of these subjects. Again, very few doctors of dentistry expect to practice even minor surgery, and those who do would seek to perfect their knowledge in another theater, and take

as a book of reference some of the more pretentious works on surgery. Hence it is unprofitable for the dental student, during his college course, to purchase a work: that is so prolific in detail as to be bulky, or that is in large part devoted to subjects in which he has no practical interest. A System of Oral Surgery

Within the book, the pathology of surgically-treated conditions of the mouth and jaws is covered in systematic fashion, this information being supported by details of epidemiology, aetiology, classification, plus clinical and radiological features. In addition, surgical and non-surgical aspects of management are discussed, as are follow-up considerations and prognosis.

TREATISE ON THE DISEASES & SUR

Excerpt from A d104-Book of Surgical Principles and Surgical Diseases of the Face, Mouth, and Jaws, for Dental Students Further, that bacteria grow best amid moist, warm surroundings, as near the temperature of the human body as possible. That they are susceptible of destruction by heat, cold, and chemicals; and that some special forms produce constantly the same special diseases or effects. Introductie

The dental treatment can be painful for the horses. That's why they are sedated.

First she feels where, for example, there are sharp edges.

Rinse the mouth with water.

is not the case with humans.

the teeth wear out. That way they stay short enough.
She grinds the molars straight again with special tools.
Do you see the difference?
This is how a horse grinds the food.
In this way, the front teeth to be sharpened.
She wakes up!
