This book is about digital soil morphometrics which is defined as the application of tools and techniques for measuring, mapping and quantifying soil profile properties, and deriving depth functions of soil properties. The book is structured along four research topics: (i) Soil profile properties, (ii) Soil profile imaging, (iii) Soil depth functions, and (iv) Use and applications. The pedon is at the heart of digital soil morphometrics. The use of digital soil morphometrics exceeds the pedology and soil classification purpose that it currently serves – it is used in rapid soil assessment that are needed in a range of biophysical studies. Digital soil morphometrics has the potential to enhance our understanding of soils and how we view them. The book presents highlights from The IUSS Inaugural Global Workshop on Digital Soil Morphometrics held in June 2015 in Madison, USA.

We live in an aging world. Illnesses that are prevalent and cause significant morbidity and mortality in older people will consume an increasing share of health care resources. One such illness is depression. This illness has a particularly devastating impact in the elderly because it is often undiagnosed or inadequately treated. Depression not only has a profound impact on quality of life but it is associated with an increased risk of mortality from suicide and vascular disease. In fact for every medical illness studied, e.g. heart disease, diabetes, cancer, individuals who are depressed have a worse prognosis. Research has illuminated the physiological and behavioral effects of depression that accounts for these poor outcomes. The deleterious relationship between depression and other illnesses has changed the concept of late-life depression from a "psychiatric disorder" that is diagnosed and treated by a psychiatrist to a common and serious disorder that is the responsibility of all physicians who care for patients over the age of 60. This is the first volume devoted to the epidemiology, phenomenology, psychobiology, treatment and consequences of late-life depression. Although much has been written about depressive disorders, the focus has been primarily on the illness as experienced in younger

adults. The effects of aging on the brain, the physiological and behavioral consequences of recurrent depression, and the impact of other diseases common in the elderly, make late-life depression a distinct entity. There is a compelling need for a separate research program, specialized treatments, and a book dedicated to this disorder. This book will be invaluable to psychiatrists, gerontologists, clinical psychologists, social workers, students, trainees, and others who care for individuals over the age of sixty.

Predictive Soil Mapping (PSM) is based on applying statistical and/or machine learning techniques to fit models for the purpose of producing spatial and/or spatiotemporal predictions of soil variables i.e. maps of soil properties and classes at different resolutions. It is a multidisciplinary field combining statistics, data science, soil science, physical geography, remote sensing, geoinformation science and a number of other sciences. Predictive Soil Mapping with R is about understanding the main concepts behind soil mapping, mastering R packages that can be used to produce high quality soil maps, and about optimizing all processes involved so that also the production costs can be reduced. The online version of the book is available at: <https://envirometrix.github.io/PredictiveSoilMapping/> Pull requests and general comments are welcome. What is the prevalence of insomnia in a particular age group, in men and women, or in Caucasians and African Americans? What is the average total sleep time among normal sleepers among these groups? How does the sleep of Caucasians and African Americans differ? These are just some of the questions addressed in *The Epidemiology of Sleep*. This new book presents the most detailed and comprehensive archive of normal and abnormal sleep patterns. Based on a landmark study supported by the National Institute on Aging, 772 subjects from a host of populations including men, women, and various age and ethnic groups, prepared detailed sleep diaries for a two-week period. The use of these sleep diaries yielded a plethora of data on such characteristics as normal sleep patterns, various forms of insomnia, fatigue, depression, anxiety, and daytime sleepiness differentiated by age, sex, and ethnicity. The results generated by these data, charted in the book's numerous tables and graphs, provide a critical methodological advance in the sleep literature. *The Epidemiology of Sleep* opens with an overview of the rationale and unique characteristics of the study. This is followed by a comprehensive review of the existing epidemiological literature on sleep. Chapter three presents a detailed description of the methods used in the survey followed by meticulous information on the epidemiology of normal and insomnia sleep, that is unparalleled in the literature. Chapter six provides an archive of sleep patterns among African Americans. The book concludes with a discussion and interpretation of the most interesting findings. This insightful study, coupled with the comprehensive review of the existing literature on the epidemiology of sleep, make this volume an invaluable resource for sleep researchers, clinicians, health and clinical psychologists, gerontologists, epidemiologists, and advanced students.

Geriatric dentistry, or gerodontology, is the branch of dental care dealing with older adults involving the diagnosis, prevention, and treatment of problems associated with normal aging and age-related diseases as part of an interdisciplinary team with other healthcare professionals. Prosthodontics is the dental specialty pertaining to the diagnosis, treatment planning, rehabilitation, and maintenance of the oral function, comfort, appearance, and health of patients with clinical conditions associated with missing or deficient teeth and/or oral and maxillofacial tissues using biocompatible materials. Periodontology, or Periodontics, is the specialty of oral healthcare that concerns supporting structures of teeth, diseases, and conditions that affect them. The supporting tissues are known as the periodontium, which includes the gingiva (gums), alveolar bone, cementum, and the periodontal ligament. Oral biology deals with the microbiota and their interaction within the oral region. Research in oral health and systemic conditions concerns the effect of various systemic conditions on the oral cavity and conversely helps to diagnose various systemic conditions.

Get from Idea to Product/Market Fit in B2B. The world has changed. Nowadays, there are more companies building B2B products than there's ever been. Products are entering organizations top-down, middle-out, and bottom-up. Teams and managers control their budgets. Buyers have become savvier and more impatient. The case for the value of new innovations no longer needs to be made. Technology products get hired, and fired faster than ever before. The challenges have moved from building and validating products to gaining adoption in increasingly crowded and fragmented markets. This, requires a new playbook. The second edition of Lean B2B is the result of years of research into B2B entrepreneurship. It builds off the unique Lean B2B Methodology, which has already helped thousands of entrepreneurs and innovators around the world build successful businesses. In this new edition, you'll learn: - Why companies seek out new products, and why they agree to buy from unproven vendors like startups - How to find early adopters, establish your credibility, and convince business stakeholders to work with you - What type of opportunities can increase the likelihood of building a product that finds adoption in businesses - How to learn from stakeholders, identify a great opportunity, and create a compelling value proposition - How to get initial validation, create a minimum viable product, and iterate until you're able to find product/market fit This second edition of Lean B2B will show you how to build the products that businesses need, want, buy, and adopt.

Winner of the National Press Club's Arthur Rowse Award for Press Criticism! From Craig Silverman, proprietor of www.RegretTheError.com, comes a lively journey through the history of media mistakes via a chronicle of funny, shocking, and often disturbing journalistic slip-ups. The errors--running the gamut from hilarious to tragic--include "Fuzzy Numbers" (when numbers and math undermine reporting) "Obiticide" (printing the obituary of a living person), and "Unintended Consequences" (typos and misidentifications that create a new, incorrect reality). While some of the errors are laugh-out-loud funny, the book also offers a serious investigation of contemporary journalism's lack of accountability to the public, and a rousing call to arms for all news organizations to mend their ways and reclaim the role of the press as honest voice of the people.

This book provides a hypothetical classification of constitutions through international law and human rights values used in any constitution, which draws connections between the inclusive standards of international law and human rights contained in the constitutions. Consequently, an evaluation method will be available for users to rank any constitution potentiality of analysis for grounds of any commitment and responsibility of the states concerning international law and human rights. "This important study uses novel quantitative and qualitative methods to explore the relationship between constitutional and international law. It is a significant contribution to the literature, and pushes us further toward rigorous analysis of transnational legal regimes." Tom Ginsburg Professor of Political Science, Chicago Law School.

This book discusses synthesis and characterization of sustainable polymers. The book covers opportunities and challenges of using sustainable polymers to replace existing petroleum based feedstock. This volume provides insights into the chemistry of polymerization, and discusses tailoring the properties of the polymers at the source in order fit requirements of specific applications. The book also covers processing of these polymers and their critical assessment. The book will be of use to chemists and engineers in the industry and academia working on sustainable polymers and their commercialization to replace dependence on petroleum-based polymers.

This book introduces recent advances in the deterministic design of photonic structures, which overcome the current limitation in conventional disordered materials. It develops new concepts for disordered photonics inspired by notions in quantum mechanics, solid-state physics, mathematics and network theory, such as isospectrality, supersymmetry, graph network, small-world, de Broglie-Bohm theory, and parity-time symmetry. The multidisciplinary approach based on the core concepts of isospectrality (Chapter 2) and metadisorder (Chapter 3) offers a new perspective on the design methodology in photonics and in general disordered structures toward top-down designs of future photonic applications: perfect bandgap with strong modal localization, switching of random waves for binary and fuzzy logics, photonic analogy of graph networks, interdimensional signal transport, robust wave functions in disordered structures, and a novel method of energy storage and phase trapping based on Bohmian photonics. This book will provide new design criteria for physicists and engineers in photonics, and inspirations for researchers in other fields.

Regret the Error

The segments of this book are based on the official test structure that has been determined to be appropriate for use by the National Board for Certified Counselors. There are more than 300 questions included in the book with full explanations and answers so that the student can be fully prepared before writing the exam. This book is different from other books in the sense that it combines both theory and practical questions into one guide.

One of the most devastating of illnesses, schizophrenia remains something of a mystery for scientists and psychiatrists trying to pinpoint its causes, understand its effects, and find a cure. Although we know that schizophrenia is an inherited disorder, new clues point to the probability that genes are only partly responsible for the disease. A growing body of evidence suggests that schizophrenia is often the result of environmental factors combined with a genetic predisposition. In *Prenatal Exposures in Schizophrenia*, a group of distinguished scientists considers a range of epigenetic elements thought to interact with abnormal genes to produce the onset of illness. The authors pay particular attention to the evidence implicating obstetric complications, prenatal infection, autoimmunity, and prenatal malnutrition in brain disorders. Chapters are arranged within four sections: * Schizophrenia and brain development* Prenatal infectious exposures* Prenatal nutritional exposures* Prenatal immunological exposures The book uses new findings on the effects of environment combined with genetics to shed light not only on the causes of schizophrenia, but also on preventive measures and potential cures. In recent years, evidence has emerged that early and sustained intervention with antipsychotic medication can reduce the duration and severity of schizophrenic symptoms. Now, by identifying events during pregnancy that place the fetus at risk for developing schizophrenia and taking steps to prevent them, the outlook for decreasing the morbidity and perhaps even the incidence of schizophrenia has never been more promising.
