Outfitting and maintaining a shop is something every woodworker wants to know more about. They are always looking for new ways to improve their shops, and this practical book is packed with innovative

ideas and projects. The subjects included in this book cover a wide range of techniques and ideas. Projects include how to make a cabinet maker's tool box, build a chop saw stand and put together an easy-to-build work bench. There is information on buying used hand tools, cutting sheet products, mobile machine bases, computers and repairing and tuning workshop machinery. Advice is also given on wiring a shop, collecting dust, using and maintaining shop equipment and running a small commercial shop. In addition, practical solutions are offered for solving a host of workshop problems.

The Small Wood Shop

The Festool(R) TS 55 EQ & TS 75 EQ have transformed the circular saw into a precision cutting system. When used with the FS/2 Guide Rail System, precision cutting can be accomplished at the work site as well as in the workshop. Together they produce absolutely straight and splinter-free cuts everytime. Whether cutting perpendicularly or at a bevel, the cut line is the same. As a plunge-cut saw, an accurate cut can be made anywhere in the material, and, because the saw blade and riving knife retract into the housing, safety is greatly increased. This user's guide gives a complete, easy-to-understand explanation of the Festool sawing system with step-by-step instructions for its use and applications. The saws are explained in detail, covering settings and adjustments, and the various blades that are available. While the saw works well in the freehand mode, it becomes a precision tool when used with the Festool FS/2 Guide Rail, a well-engineered and versatile system with many applications. The guide rail system, the Festool Multifunction Table and the CT Dust Extraction System are also covered here in detail.

The Islamic Finance Industry

Islamic finance has emerged to meet the financial needs of people who seek a different approach to conventional banking and finance. Due to its late inception, Islamic finance has often been regarded as an "infant industry" compared to its traditional counterparts. Even though the Islamic finance industry is still classified as nascent, it has shown rapid growth in the last decade or so. The primary objective of this book is to highlight the main issues and challenges the Islamic finance industry faces and to offer practical solutions. Firstly, the book classifies the main components of Islamic finance such as money and banking, capital markets, fintech, microfinance, insurance as well as morality and governance. Secondly, all of the chapters are combined according to their relationship and link with each other so as to provide readers with a unique and holistic overview of the subject. The chapters are written by well-renowned experts in the field. As well as offering readers theoretical information about each subject under discussion, it also advances practical solutions that can contribute to the development of each field. The book answers questions such as how money is created by banks; what the business model of Islamic banking should look like; whether Islamic microfinance institutions are sustainable; what the likely framework of takaful should be; what the potential role of fintech could be in reshaping the Islamic financial system, and where and whether morality fits in the financial system. The book will attract the attention of students, researchers, practitioners, regulators and policymakers.

Energy, Trade and Finance in Asia

This study offers a vital reappraisal of the trade relationship between north-east Asia and the Gulf. Writing from a non-western standpoint, Dargin and Lim make a compelling case for how these regions became economically integrated in the wake of the 1973 oil crisis.

Food Science, Production, and Engineering in Contemporary Economies

As the population of the world continues to surge upwards, it is apparent that the global economy is unable to meet the nutritional needs of such a large populace. In an effort to circumvent a deepening food crisis, it is pertinent to develop new sustainability strategies and practices. Food Science, Production, and Engineering in Contemporary Economies features timely and relevant information on food system sustainability and production on a global scale. Highlighting best practices, theoretical concepts, and emergent research in the field, this book is a critical resource for professionals, researchers, practitioners, and academics interested in food science, food economics, and sustainability practices.

Lahore in the 21st Century

Analysing the evolution of Lahore's social organization, culture and ideologies since Pakistan's independence in 1947, this book explores how social and cultural changes affect the social economy, spatial structure and the urban environment. It uncovers the internal dynamics and functional order of the city that sustain everyday life, despite its challenges and seemingly disorderly institutions. The book offers a strategic vision for the city's development that emphasizes equitable policies for public utilities and the built environment. In addition, the author proposes a complementary programme for social development and civic ethos. This book will be a valuable resource for academics and students in the fields of urban planning, geography, urban studies and sociology and those interested in the urbanism of the global south, particularly Pakistan.

Konzeptionelle Grundlagen eines marktorientierten strategischen Krankenhauscontrollings

Sowohl aus praktischer als auch aus theoretischer Perspektive ergibt sich im (marktorientierten) strategischen Krankenhauscontrolling eine Forschungslücke. Mit dieser Arbeit wird ein Beitrag zur Schließung dieser Lücke geleistet. Die generelle Zielsetzung besteht darin, den Stand und die Perspektiven eines marktorientierten strategischen Krankenhauscontrollings aufzuzeigen. Um dieses Ziel zu erreichen, erfolgt sowohl eine theoretische als auch eine empirische Untersuchung dieses Themengebietes aus funktionellem, instrumentellem sowie institutionellem Blickwinkel. Die Herausforderung besteht für Krankenhäuser darin, ein professionelles marktorientiertes strategisches Controlling zu implementieren, das seiner Unterstützungsfunktion bei der Schaffung/Sicherstellung zukünftiger Erfolgspotentiale gerecht werden kann. Dafür sind geeignete Instrumente auszuwählen und einzusetzen. Deshalb werden Aufgaben und Instrumente eines marktorientierten strategischen Krankenhauscontrollings näher dargestellt, das wichtige Informationen zu Chancen und Risiken aus den Umsystemen (v.a. dem Markt) generiert und analysiert, um das Krankenhaus (und seine Potentiale) langfristig marktorientiert auszurichten. Der Schwerpunkt liegt auf dem bisher im Krankenhaus eher unterrepräsentierten strategischen Bereich.

Familienformen im sozialen Wandel

Das Buch zeigt für West- und Ostdeutschland und für die Länder der Europäischen Union vergleichend auf, dass der Anteil der Bevölkerung, der nach konventionellen Mustern lebt, stark rückläufig ist und im Zuge eines allgemeinen gesellschaftlichen Modernisierungsprozesses die Zahl derer ansteigt, die nicht-traditionale Lebens- und Beziehungsformen praktizieren. Informationen der amtlichen Statistik werden ergänzt durch Ergebnisse empirischer Untersuchungen, die die Selbstwahrnehmung der Befragten in den Mittelpunkt stellen und differenzierte Einblicke in die komplexen Beziehungskonstellationen erlauben.

Onmisbaar openbaar. Een blik op de rol, het belang, de werking en de toekomst van de openbare sector

De vele besturen en organisaties die instaan voor de publieke dienstverlening zijn de afgelopen jaren geëvolueerd naar moderne organisaties. Dat moet wel, want de openbare sector is een cruciale hefboom voor de toekomst van onze samenleving. Het maatschappelijk belang en de meerwaarde van de overheid en van collectieve voorzieningen wordt vaak te weinig benadrukt. Daartegenover staat dat mensen moeten kunnen rekenen op een overheid die goed werkt, en die beschikbare middelen op de juiste manier inzet. Daarom kijken wij met een open blik naar openbare diensten: Wat doen ze? Waarom? Wat hebben we eraan? In welke mate slagen ze in hun opdracht? Wat kan er verbeteren? In "Onmisbaar openbaar" kijkt het ACV-Openbare Diensten onbevangen, welwillend maar ook kritisch, naar het belang, de werking en de toekomst van de openbare diensten in België.

Risk Management in Crisis

Risk management is a domain of management which comes to the fore in crisis. This book looks at risk management under crisis conditions in the COVID-19 pandemic context. The book synthesizes existing concepts, strategies, approaches and methods of risk management and provides the results of empirical research on risk and risk management during the COVID-19 pandemic. The research outcome was based on the authors' study on 42 enterprises of different sizes in various sectors, and these firms have either been negatively affected by COVID-19 or have thrived successfully under the new conditions of conducting business activities. The analysis looks at both the impact of the COVID-19 pandemic on the selected enterprises and the risk management measures these enterprises had taken in response to the emerging global trends. The book puts together key factors which could have determined the enterprises' failures and successes. The final part of the book reflects on how firms can build resilience in challenging times and suggests a model for business resilience. The comparative analysis will provide useful insights into key strategic approaches of risk management. A Theory of Enclaves

Attempting to provide a fully-fledged theory of enclaves and exclaves, A Theory of Enclaves covers a wide scope of regions and territories throughout the world and satisfies the need for a systematic view on enclaves. This book covers 282 enclaves, with a combined population total of approximately three million, but the importance of enclaves is much higher because of their specific status and issues raised for both the mainland states and the surrounding states: Gibraltar was disproportionately large for British-Spanish relations throughout the last three centuries, Kaliningrad managed to cause a major crisis in the EU-Russian relations in 2002-03, Tiny Ceuta and Melilla have caused tensions in Spanish-Moroccan relations for more than three centuries and have recently become visible as conflict points at the EU level, German Buesingen was subject to several complex international treaties between Germany and Switzerland. Rather than viewing each enclave as a unique case, or even as an anomaly, A Theory of Enclaves provides a systematic investigation of enclave-related political and economic issues. Rich on maps and illustrations, A Theory of Enclaves strives to comprise three facets of enclaves' existence: political, economic, and social life.

The Shadow Economy

This book presents new data to give an overview of shadow economies from OECD countries and propose solutions to prevent illicit work.

History of Universities

In this special issue, the contributors examine the institutional and intellectual history of the Collège de Montaigu, from the fourteenth to the eighteenth century.

Nonlinear Time Series

Useful in the theoretical and empirical analysis of nonlinear time series data, semiparametric methods have received extensive attention in the economics and statistics communities over the past twenty years. Recent studies show that semiparametric methods and models may be applied to solve dimensionality reduction problems arising from using fully nonparametric models and methods. Answering the call for an up-to-date overview of the latest developments in the field, Nonlinear Time Series: Semiparametric and Nonparametric Methods focuses on various semiparametric methods in model estimation, specification testing, and selection of time series data. After a brief introduction, the book examines semiparametric estimation and specification methods and then applies these approaches to a class of nonlinear continuous-time models with real-world data. It also assesses some newly proposed semiparametric estimation procedures for time series data with long-range dependence. Even though the book only deals with climatological and financial data, the estimation and specifications methods discussed can be applied to models with real-world data in many disciplines. This resource covers key methods in time series analysis and provides the necessary theoretical details. The latest applied finance and financial econometrics results and applications presented in the book enable researchers and graduate students to keep abreast of developments in the field.

Foreign Aid and Development

Peter Hjertholm, Editorial Assistant Aid has worked in the past but can be made to work better in the future. In this important new book, leading economists and political scientists, including experienced aid practitioners, re-examine foreign aid. The evolution of development doctrine over the past fifty years is critically investigated, and conventional wisdom and current practice is challenged. As well as offering important new research material, the book opens up new directions for future practice and policy. It will be of vital interest to those working in economics, politics and development studies, as well as to governmental and aid professionals.

Danish Reactions to German Occupation

For five years during World War II, Denmark was occupied by Germany. While the Danish reaction to this period of its history has been extensively discussed in Danish-language publications, it has not until now received a thorough treatment in English. Set in the context of modern Danish foreign relations, and tracing the country's responses to successive crises and wars in the region, *Danish Reactions to German Occupation* brings a full overview of the occupation to an English-speaking audience. Holbraad carefully dissects the motivations and ideologies driving conduct during the occupation, and his authoritative coverage of the preceding century provides a crucial link to understanding the forces behind Danish foreign policy divisions. Analysing the conduct of a traumatised and strategically exposed small state bordering on an aggressive great power, the book traces a development from reluctant cooperation to active resistance. In doing so, Holbraad surveys and examines the subsequent, and not yet quite finished, debate among Danish historians about this contested period, which takes place between those siding with the resistance and those more inclined to justify limited cooperation with the occupiers – and who sometimes even condone various acts of collaboration.

Exile and migration played a critical role in the diffusion and development of modernism around the globe, yet have long remained largely understudied phenomena within art historiography. Focusing on the intersections of exile, artistic practice and urban space, this volume brings together contributions by international researchers committed to revising the historiography of modern art. It pays particular attention to metropolitan areas that were settled by migrant artists in the first half of the 20th century. These arrival cities developed into hubs of artistic activities and transcultural contact zones where ideas circulated, collaborations emerged, and concepts developed. Taking six major cities as a starting point – Bombay (now Mumbai), Buenos Aires, Istanbul, London, New York, and Shanghai – the authors explore how urban topographies and landscapes were modified by exiled artists re-establishing their practices in metropolises across the world. Questioning the established canon of Western modernism, *Arrival Cities* investigates how the migration of artists to different urban spaces impacted their work and the historiography of art. In doing so, it aims to encourage the discussion between international scholars from different research fields, such as exile studies, art history, social history, architectural history, architecture, and urban studies.

Arrival Cities

This is the first comprehensive overview of the exciting field of the 'science of science'. With anecdotes and detailed, easy-to-follow explanations of the research, this book is accessible to all scientists, policy makers, and administrators with an interest in the wider scientific enterprise.

The Serials Directory

Challenging the traditional belief that Hitler's supporters were largely from the lower middle class, Richard F. Hamilton analyzes Nazi electoral successes by turning to previously untapped sources--urban voting records. This examination of data from a series of elections in fourteen of the largest German cities shows that in most of them the vote for the Nazis varied directly with the class level of the district, with the wealthiest districts giving it the strongest support. The Science of Science

Fascism was the major political invention of the twentieth century and the source of much of its pain. How can we try to comprehend its allure and its horror? Is it a philosophy, a movement, an aesthetic experience? What makes states and nations become fascist? Acclaimed historian Robert O. Paxton shows that in order to understand fascism we must look at it in action - at what it did, as much as what it said it was about. He explores its falsehoods and common threads; the social and political base that allowed it to prosper; its leaders and internal struggles; how it manifested itself differently in each country - France, Britain, the low countries, Eastern Europe, even Latin America as well as Italy and Germany; how fascists viewed the Holocaust; and, finally, whether fascism is still possible in today's world. Offering a bold new interpretation of the fascist phenomenon, this groundbreaking book will overturn our understanding of twentieth-century history.

Who Voted for Hitler?

Since the mid-nineteenth century photography has played a central role in cultural encounters within and between migrant communities in the United States. Migrant histories have been mediated through the photographic image, and the cultural practices of photography have themselves been transformed as migrant communities mobilise the photographic image to navigate experiences of cultural dislocation and the forging of new identities. Exploring photographic images and the cultural practices of photography as 'contact zones' through which cultural exchange and transformation takes place, this volume addresses the role of photography in migrant histories in the United States from the mid-nineteenth century to today. Taking as its focal point photography's role in shaping migrant experiences of cultural transformation, and how migrant experiences have re-configured culturally differentiated practices of photography, case studies on migration from Europe, Central America, and North America position photography as entwined with cultural histories of migration and cultural transformation in the United States.

Contact Zones

An invaluable resource for students of law, politics, international relations and technology as well as for diplomats and civil society actors, this publication demonstrates how the Council of Europe contributes to ensuring that everyone's voice online can be heard. This is key to sustainable, human rights oriented and people-centred digitalisation. Human rights matter on the internet. Without freedom of expression, people cannot participate in everything that the information society has to offer. Yet online free speech is in danger. Between state laws, private rules and algorithms, full participation in the online communicative space faces many challenges. This publication explores the profound impact of the internet on free expression and how it can be effectively secured online. The second, updated edition of this introduction into the protection of freedom of expression online answers essential questions regarding the extent and limits of freedom of expression online and the role of social networks, courts, states and organisations in online communication spaces. In clear language, with vivid examples spanning two decades of internet law, the authors answer questions on freedom of expression in cyberspace. Addressing issues from the protection of bloggers to the right to access online information, the publication also shows the importance of the standard-setting, monitoring and promotion activities of international and non-governmental organisations and includes a chapter on relevant national practice. It pays special attention to the role of European human rights law and the Council of Europe as this region's most important human rights organisation.

Measuring Vulnerability to Natural Hazards presents a broad range of current approaches to measuring vulnerability. It provides a comprehensive overview of different concepts at the global, regional, national, and local levels, and explores various schools of thought. More than 40 distinguished academics and practitioners analyse quantitative and qualitative approaches, and examine their strengths and limitations. This book contains concrete experiences and examples from Africa, Asia, the Americas and Europe to illustrate the theoretical analyses. The authors provide answers to some of the key questions on how to measure vulnerability and they draw attention to issues with insufficient coverage, such as the environmental and institutional dimensions of vulnerability and methods to combine different methodologies. This book is a unique compilation of state-of-the-art vulnerability assessment and is essential reading for academics, students, policy makers, practitioners, and anybody else interested in understanding the fundamentals of measuring vulnerability. It is a critical review that provides important conclusions which can serve as an orientation for future research towards more disaster resilient communities.

Freedom of expression and the internet

This open access book presents a topical, comprehensive and differentiated analysis of Germany's public administration and reforms. It provides an overview on key elements of German public administration at the federal, Länder and local levels of government as well as on current reform activities of the public sector. It examines the key institutional features of German public administration; the changing relationships between public administration, society and the private sector; the administrative reforms at different levels of the federal system and numerous sectors; and new challenges and modernization approaches like digitalization, Open Government and Better Regulation. Each chapter offers a combination of descriptive information and problem-oriented analysis, presenting key topical issues in Germany which are relevant to an international readership.

Measuring Vulnerability to Natural Hazards

The book presents an overview of the general aspects of trade uncertainty, a central element in the analysis of economic diplomacy, illustrating that some instruments, such as sanctions (both positive and negative), increase trade uncertainty, whilst others - multilateral trade policy, for instance - aim to reduce this uncertainty. Commercial policy and bilateral economic diplomacy are explored, and economic sanctions analysed. An extensive review of the literature and empirical investigations of 161 sanctions and the commercial relationships of 37 countries provide topical and empirical perspectives on how international diplomacy may both be a cost and a benefit of the key drivers of productivity growth. Finally, policy conclusions are drawn, and a future research agenda presented.

Public Administration in Germany

Primary commodities still account for the bulk of exports in many developing countries. However, real commodity prices have been declining almost continuously since the early 1980s and there is evidence of renewed weakness. The appropriate policy response to a terms of trade shock depends importantly on whether the shock is perceived to be temporary or permanent. Our results indicate that the recent weakness in commodity prices is mostly of a secular nature, stressing the need for commodity exporting countries to concentrate on export diversification and other structural policies. There is, however, scope for stabilization funds and the use of hedging strategies since the evidence also suggests commodity prices have become more volatile.

Economic Diplomacy and the Geography of International Trade

Looks at the operations of the International Space Station from the perspective of the Houston flight control team, under the leadership of NASA's flight directors, who authored the book. The book provides insight into the vast amount of time and energy that these teams devote to the development, planning and integration of a mission before it is executed. The passion and attention to detail of the flight control team members, who are always ready to step up when things do not go well, is a hallmark of NASA human spaceflight operations. With tremendous support from the ISS program office and engineering community, the flight control team has made the International Space Station and the programs before it a success.

In this exploration of new territory between ethics and epistemology, Miranda Fricker argues that there is a distinctively epistemic type of injustice, in which someone is wronged specifically in their capacity as a knower. Justice is one of the oldest and most central themes in philosophy, but in order to reveal the ethical dimension of our epistemic practices the focus must shift to injustice. Fricker adjusts the philosophical lens so that we see through to the negative space that is epistemic injustice. The book explores two different types of epistemic injustice, each driven by a form of prejudice, and from this exploration comes a positive account of two corrective ethical-intellectual virtues. The characterization of these phenomena casts light on many issues, such as social power, prejudice, virtue, and the genealogy of knowledge, and it proposes a virtue epistemological account of testimony. In this ground-breaking book, the entanglements of reason and social power are traced in a new way, to reveal the different forms of epistemic injustice and their place in the broad pattern of social injustice.

Hardbound. State-of-the-art statements in technology-related issues of business policy are presented in this volume. All aspects of technology policy which managers have to cope with are covered, including: R&D management, technological developments as related to corporate strategy, procedures conducive to innovation, matching technological development trends and so on. In order to provide a global world perspective, contributions have been made by authors from Europe, the US and Japan. Each author presents an articulated framework of his/her topic, based on personal research, with due consideration of the analytical tools presently available to managers and strategists. The authors of each single chapter contribute comments to the others. The book will provide useful indications for scholars and professionals, students, R&D managers, strategists and planners, and all general managers who have to deal with technological decisions and issues.
