Faith and Social Capital After the Debt Crisis

This book explores what becomes of faiths when seen as social capital. In the grip of the current debt crisis, where the social and capital seem increasingly unbalanced, this book examines whether faiths can help rebalance society through drawing communities together.

Research in the Social Scientific Study of Religion, Volume 26

This volume includes a wide range of papers from Europe, North America and Australia that explore individual and institutional aspects of religion from a social-science perspective. The special section is on clergy work-related psychological health, stress, burnout and coping strategies.

Society Shaped by Theology

Society Shaped by Theology explores the possibility that theological concepts may sometimes still be influential in the modern world. It follows in the tradition of Max Weber, arguing that theological virtues and debates can at times be transposed, wittingly or unwittingly, into society at large. Gill examines the unusual instance of the public debate about Honest to God in the 1960s, but then turns to the current debate about faith and social capital, adding fresh and unexpected evidence.

Society Shaped by Theology

Over the last thirty years a number of theologians have been using aspects of sociology alongside the more traditional resources of philosophy. In turn, sociologists with an interest in theology have also contributed to an interaction between theology and sociology. The time is right to revisit the dialogue between theologians and sociologists. In his new trilogy on Sociological Theology, Robin Gill makes a renewed contribution to the mapping of three abiding ways of relating theology and sociology, with the three volumes covering: *Theology in a Social Context*; *Theology Shaped by Society*; *Society Shaped by Theology*. *Society Shaped by Theology* explores the possibility that theological concepts may sometimes still be influential in the modern world. It follows in the tradition of Max Weber, arguing that theological virtues and debates can at times be transposed, wittingly or unwittingly, into society at large. Robin Gill examines the unusual instance of the public debate about *Honest to God* in the 1960s, but then turns to the current debate about faith and social capital, adding fresh and unexpected evidence. Finally Gill argues that bioethics in the public domain, especially on global issues such as AIDS, can be enriched and deepened by a judicious use of theological virtues.

Social Work and Faith-based Organizations

Faith-based organizations continue to play a significant role in the provision of social work services in many countries but their role within the welfare state is often contested. This text explores their various roles and relationships to social work practice, includes examples from different countries and a range of religious traditions and identifies challenges and opportunities for the sector. *Social Work and Faith-based Organizations* discusses issues such as the relationship between faith-based organizations and the state, working with an organization's stakeholders, ethical practice and dilemmas, and faith-based organizations as employers. It also addresses areas of debate and controversy, such as providing services within and for multi-faith communities and tensions between professional codes of ethics and religious doctrine. Accessibly written by a well-known social work educator, it is illustrated by numerous case studies from a range of countries including Australia, the UK and the US. Suitable for social work students taking community or administration courses or undertaking placements in faith-based organizations, this innovative book is also a valuable resource for managers and religious personnel who are responsible for the operation of faith-based agencies.

Religion and Belief Literacy

This book presents a crisis of religion and belief literacy to which education at every level is challenged to respond. As understanding different religions, beliefs and influences becomes increasingly important, it fills a gap for a resource in bringing together the debates around religious literacy, from theoretical approaches to teaching and policy. This timely publication provides a clear pathway for engaging well with religion and belief diversity in public and shared settings.

Religion as Social Capital

While Robert Putnam's *Bowling Alone* (2000) highlighted the notion of volunteerism, little attention has been paid to religion's role in generating social capital—an ironic omission since religion constitutes the most common form of voluntary association in America today. Featuring essays by prominent social scientists, this is the first book-length, systematic examination of the relationship between religion and social capital and what effects religious social capital has on democratic life in the United States.

Religion and Welfare in Europe

Religion and Welfare in Europe examines social change in Europe in recent years and how it relates to religion, minority populations, and gender, and their interacting effects on inclusion and conflict. Bringing together international experts in a wide range of fields, the book looks closely at various practices of social service provision in a number of different countries, exploring links between values, welfare, and social change, with particular attention to changes brought about by recent austerity measures.

Modernities, Memory and Mutations

Grace Davie, one of the world's most influential scholars in contemporary sociology of religion, has furthered a tradition developed by David Martin and others in comparative sociology of religion

and modernity in European and international perspective. Davie's writings on belief and belonging, particularly in a context outside active Church participation, have contributed important understandings of the cultural role of religion as memory and practice in contemporary European societies. Through her most recent work on new roles of religion in relation to the political, legal and welfare sectors of society, she has addressed debates on the resurgence of religion and the 'post-secular condition'. *Modernities, Memory and Mutations* presents an overview and critical engagement with contemporary themes in the sociology of religion which will inform current and forthcoming generations of scholars. Reflecting on how Grace Davie's contributions have influenced their own work and wider debates in the field, leading international scholars engage with themes Davie has critically explored across religious studies and mainstream sociology evolving a new research agenda for sociology of religion.

Political Religion, Everyday Religion: Sociological Trends

Distinguished contributors focus on the relationship between politics and religion, and on ordinary people's religious life. These topics are approached through empirical studies and theoretical discussions, and editor Pål Repstad demonstrates the need for a closer relationship between the two topics.

Issues in Religion and Education

Issues in Religion and Education, Whose Religion? is a contribution to the dynamic and evolving global debates about the role of religion in public education. It provides a cross-section of the debates over religion.

Neville Figgis, CR: His Life, Thought and Significance

In this book, eminent scholars expound and critique the thought of the brilliant but neglected Anglican theologian, historian, political thinker and preacher John Neville Figgis, CR (1866-1919) and explore his significance for our times.

Beyond Establishment

The Church of England finds itself colliding with society at large on regular occasion. Has the time come, therefore, where the advantages of being the established church are at last outweighed by the disadvantages? Is there a case for disestablishment, and if so, what might a fresh vision of the church's relationship with wider society be? Separating the question of establishment, from the question of presence in the community, Jonathan Chaplin argues that the time has come for the ending of privileged constitutional ties between the Church of England the British state. Rather than offering a smaller place for the Church of England within society, he suggests, such a separation would in fact enhance its ability to maintain an embedded presence in local parishes, and allow it the room to speak out about the deeper, bigger challenges which face society today.

Religion and Higher Education in Europe and North America

Religion and Higher Education in Europe and North America illuminates the experiences of staff and students in higher education as they negotiate the university environment. Religious extremism has been rising across Europe, whilst recent attacks have thrown public debate around the place of religion on campus, the role of universities in recognising and managing religious fundamentalism and freedom of speech on campus into sharper focus. Despite these debates, research exploring religion on campus has been largely absent from discourse on higher education outside of America, with policy and practices designed to deal with religion on campus largely founded on supposition rather than evidence. This book speaks into that void, including results from recent studies in the field which form an empirically grounded base from a broad variety of perspectives on religion at universities. Aiming to offer a deeper perspective, more dialogue, and engagement on the experiences of students, *Religion and Higher Education in Europe and North America* presents us not only with an opportunity to counter growing trends of intolerance, but for people to connect with the humanity of others. Focusing on what research reveals about staff and students' experiences, it incorporates research from different academic disciplines including sociology, education, social policy, theology and religious studies, and across different faith and belief groups. This thought-provoking and challenging volume features chapters written by researchers involved in informing policy and practice relating to religion and belief in higher education in the UK, US, Canada, France and the Netherlands. Spanning the academic-practitioner divide, students and academics interested in the sociology of religion and of

higher education, as well as those responsible for the practical management of campus life, will find this text of particular importance.

A Companion to Public Theology

The Companion to Public Theology offers a collection of cutting-edge essays by an international group of scholars that provides a foundation for public theology as well as engagement with a wide range of public issues in dialogue with other disciplines.

Apologetics without Apology

Against many expectations, religion has not vanished from Western culture. People are troubled and fascinated in equal measure by this new visibility and are unsure whether it is right to (re)incorporate the vocabulary of faith into our common life. This unprecedented co-existence of religion and secularism is sometimes termed the “postsecular,” and in this book Elaine Graham considers some of its implications for the public witness of Christianity. She argues that everyone, from church leaders, theologians, local activists, and campaigners, needs to learn again how to “speak Christian” in these contexts. They need to articulate credible theological justifications for their involvement in public life and to justify the very relevance of their faith to a culture that no longer grants automatic privilege or credence. This entails a retrieval of the ancient practice of apologetics, in order to encourage and equip Christians to defend and commend their core principles and convictions in public. This “new apologetics” involves discerning the actions of God in the world, participating in the praxis of God’s mission and bearing witness in word and deed. Rather than being an adversarial or argumentative process, this is an invitation to dialogue and to the rejuvenation of our public life.

A Handbook of Chaplaincy Studies

A Handbook of Chaplaincy Studies explores fundamental issues and critical questions in chaplaincy, spanning key areas of health care, the prison service, education and military chaplaincy. Leading authors and practitioners in the field present critical insight into the challenges and opportunities facing those providing professional spiritual care. From young men and women in the military and in custody, to the bedside of those experiencing life’s greatest traumas, this critical examination of the role played by the chaplain offers a fresh and informed understanding about faith and diversity in an increasingly secular society. An invaluable compendium of case-studies, academic reflection and critical enquiry, this handbook offers a fresh understanding of traditional, contemporary and innovative forms of spiritual practice as they are witnessed in the public sphere. Providing a wide-ranging appraisal of chaplaincy in an era of religious complexity and emergent spiritualities, this pioneering book is a major contribution to a relatively underdeveloped field and sets out how the phenomenon of chaplaincy can be better understood and its practice more robust and informed.

Between a Rock and a Hard Place

Public theology is an increasingly important area of theological discourse with strong global networks of institutions and academics involved in it. Elaine Graham is one of the UK’s leading theologians and an established SCM author. In this book, Elaine Graham argues that Western society is entering an unprecedented political and cultural era, in which many of the assumptions of classic sociological theory and of mainstream public theology are being overturned. Whilst many of the features of the trajectory of religious decline, typical of Western modernity, are still apparent, there are compelling and vibrant signs of religious revival, not least in public life and politics - local, national and global. This requires a revision of the classic secularization thesis, as well as much Western liberal political theory, which set out separate or at least demarcated terms of engagement between religion and the public domain. Elaine Graham examines claims that Western societies are moving from ‘secular’ to ‘post-secular’ conditions and traces the contours of the ‘post-secular’: the revival of faith-based engagement in public sphere alongside the continuing - perhaps intensifying - questioning of the legitimacy of religion in public life. She argues that public theology must rethink its theological and strategic priorities in order to be convincing in this new ‘post-secular’ world and makes the case for the renewed prospects for public theology as a form of Christian apologetics, drawing from Biblical, classical and contemporary sources.

Religious Literacy in Policy and Practice

Although we often assume religion is in decline in the West, it continues to have an important yet contested role in individual lives and in society at large. And after half a century in which religion and belief were barely talked about in the public sphere, we face a pressing lack of religious literacy. Many are now ill-equipped to engage with religion and belief when they encounter them in their daily lives--in relationships, law, media, professions, business, and politics, among other venues. This valuable book is the first to bring together theory and policy with analysis and expertise to explore what religious literacy is, why it is needed, and what might be done about it. Its contributors make the case for a public realm that is well-equipped to engage with the plurality and pervasiveness of religion and belief, whatever an individual participant's own stance. It will be of great importance to academics, policy makers, and practitioners interested in the manifold implications of the continued presence of religion and belief in the public sphere.

Making Space for Queer-Identifying Religious Youth

Making Space for Queer-Identifying Religious Youth charts young people's understanding of religion, investigating the experiences, choices and identities of queer - lesbian, gay, bisexual, transgender - youth involved in inclusive churches. Rather than assume that sexuality and religion, and in this case Christianity, are separate and divergent paths, this book explores how they might mutually and complexly construct one another in times of religious-sexual citizenship. Taylor presents a methodological discussion on the 'public sociology' of religion and sexuality studies, and provides an illustrative focus on substantive fields often separated in disciplinary dis-orientations. These examples illustrate how participation shapes identifications; how marginalization and discrimination are managed; and how religion and sexuality serve as vehicles for various forms of belonging, identification and expression. 'Religion' and 'sexuality' are mutually constructed through gendered spaces, online spaces, and sensory spaces.

Perfecting Human Futures

Humans have always imagined better futures. From the desire to overcome death to the aspiration to dominion over the world, imaginations of the technological future reveal the commitments, values, and norms of those who construct them. Today, the human future is thrown into question by emerging technologies that promise radical control over human life and elicit corollary imaginations of human perfectibility. This interdisciplinary volume assembles scholars of science and technology studies, sociology, philosophy, theology, ethics, and history to examine imaginations of technological progress that promises to transcend the constraints of human body and being. Attending in particular to transhumanist and posthumanist visions, the volume breaks new ground by exploring their utopian and eschatological dimensions and situating them within a broader context of ideas, institutions, and practices of innovation. The volume invites specialists and general readers to explore the stakes of contemporary imaginations of technological innovation as a source of progress, a force of social and historical transformation, and as the defining essence of human life.

The Well-Connected Community

There is growing recognition in practice and policy of how networking contributes to the vitality and cohesion of community life and civil society. The Well-Connected Community provides theoretical insights and practical guidance for people working with and for communities. This updated edition takes account of the changing political and economic context, including rising social inequalities and community tensions. It considers new approaches to well being, such as social prescribing and the use of social media for local and global organising. This model of community development explains and promotes networking as a skilled and strategic intervention and provides recommendations for good practice.

Crucible

This study explores the motivations for planned teenage pregnancy in England, based on 51 in-depth interviews undertaken in disadvantaged areas.

Faith as Social Capital

In Economic Theology, Goodchild offers a philosophical analysis of the contemporary economy in terms of the way it structures credit and faith. The Great Financial Crisis of 2007 and onwards has exposed

the extent to which the economy functions as a network of credits and debts. Credit and debt may now be understood as the driving force of economic behaviour. In this analysis, economic theories of markets and money are also ways of ordering trust. Similarly, the institutions of money, finance and banking provide the framework enabling trust and cooperation. Goodchild explores how reliance on such theories and institutions produces disequilibrium dynamics, growing inequalities, increasing enclosure, resource depletion and breakdown. Nevertheless, the failures of the system only intensify efforts to extend the system itself. Building on and extending Goodchild's Theology of Money, the author exposes the extent to which humanity has become enslaved within theories and institutions of its own making. As the second volume in his Credit and Faith trilogy, Goodchild explains how the economy itself is a way of shaping time and attention, care and evaluation, trust and cooperation, so directly assuming a theological role. This volume extends the theological critique of the dynamics of financial capitalism.

Economic Theology

Theology of Money is a philosophical inquiry into the nature and role of money in the contemporary world. Philip Goodchild reveals the significance of money as a dynamic social force by arguing that under its influence, moral evaluation is subordinated to economic valuation, which is essentially abstract and anarchic. His rigorous inquiry opens into a complex analysis of political economy, encompassing markets and capital, banks and the state, class divisions, accounting practices, and the ecological crisis awaiting capitalism. Engaging with Christian theology and the thought of Carl Schmitt, Georg Simmel, Karl Marx, Adam Smith, and many others, Goodchild develops a theology of money based on four contentions, which he elaborates in depth. First, money has no intrinsic value; it is a promise of value, a crystallization of future hopes. Second, money is the supreme value in contemporary society. Third, the value of assets measured by money is always future-oriented, dependent on expectations about how much might be obtained for those assets at a later date. Since this value, when realized, will again depend on future expectations, the future is forever deferred. Financial value is essentially a degree of hope, expectation, trust, or credit. Fourth, money is created as debt, which involves a social obligation to work or make profits to repay the loan. As a system of debts, money imposes an immense and irresistible system of social control on individuals, corporations, and governments, each of whom are threatened by economic failure if they refuse their obligations to the money system. This system of debt has progressively tightened its hold on all sectors and regions of global society. With Theology of Money, Goodchild aims to make conscious our collective faith and its dire implications.

Theology of Money

A fundamental belief in personal liberty and in the ability of free markets to realise the good lies at the heart of the neoliberal economic orthodoxy that has now shaped public policy for a generation. Confidence in orthodox economics has, however, been badly shaken by the financial crisis of 2008 and, in the years following, by the effects of the Great Recession. The era of casino banking was not only an era of de-industrialisation and under-employment, but also of iniquitous tax avoidance schemes, and of grotesquely inflated levels of social inequality. Such factors, we now realise, have reduced the life-prospects of millions of our fellow-citizens. This interdisciplinary volume of essays, with wide-ranging contributions by theologians and social scientists, explores the theological, economic, and moral implications of these developments. Its central claim is that neoliberalism's failure to appreciate the limitations of its fiduciary commitments contributed massively to the economic crisis. A more honest appraisal of the relation between the language of belief and the sphere of economic behaviour is therefore required. This must also result in appropriate policy changes, to harness the power of the economy to serve a more generous vision of the human good.

God and the Financial Crisis

This two volume work examines the role of spiritual and religious traditions as a balancing force during times of crisis in organizational settings. Elucidating the varied ways in which spiritual/religious traditions provide new ways of coping in unprecedented times, the chapters provide an integrative review and critical analysis of recent research in the field. Bringing together an extraordinary compendium of religious/ spiritual traditions through a combination of Eastern and Western approaches, this comprehensive work provides a new perspective and highlights alternative mechanisms to deal with current socio-economic dilemmas and workplace crisis facing humanity. Weaving together various strands in a systematic manner, Volume 1 focuses on the faith traditions and practices including

Hinduism Sikhism, Quakerism, Catholicism, Presbyterianism, Abraham religions, while Volume 2 focuses on spiritual traditions including Buddhism and Confucianism. Within the chapters of Volume 1, the authors offer critical explorations of a wide range of topics ranging from crisis management, community responses to Covid-19, environmental degradation and inclusive economic growth.

Faith Traditions and Practices in the Workplace Volume I

This book explores the contributions that research, with refugees and with faith-based organizations for example, makes to strengthen community development and consequently promote active citizenship and social justice.

Community Research for Community Development

The development community is increasingly aware of tensions and challenges inherent in relief work – and the need for sustainable solutions for communities experiencing poverty and crisis. How can the local church help to create and maintain such resilient communities? Boan and Ayers utilize their extensive experience working within the humanitarian sector, and in cooperation with local churches, to examine the evidence for effective partnerships between development agencies and local faith communities. The authors provide practical guidance on how church leaders can forge stronger relationships with NGOs, donors, and government while reinforcing, rather than compromising, the unique calling of the church. They explore resilience as an inherently communal characteristic and one located at the heart of the church's historic calling to build community, strengthen faith, and shelter those in need. This is an excellent resource for anyone desiring to understand the value of local faith communities in battling poverty and helping communities survive and thrive amidst the impact of climate change and natural disasters.

Creating Shared Resilience

President Obama has signaled a sharp break from many Bush Administration policies, but he remains committed to federal support for religious social service providers. Like George W. Bush's faith-based initiative, though, Obama's version of the policy has generated loud criticism - from both sides of the aisle - even as the communities that stand to benefit suffer through an ailing economy. God's Economy reveals that virtually all of the critics, as well as many supporters, have long misunderstood both the true implications of faith-based partnerships and their unique potential for advancing social justice. Unearthing the intellectual history of the faith-based initiative, Lew Daly locates its roots in the pluralist tradition of Europe's Christian democracies, in which the state shares sovereignty with social institutions. He argues that Catholic and Dutch Calvinist ideas played a crucial role in the evolution of this tradition, as churches across nineteenth-century Europe developed philosophical and legal defenses to protect their education and social programs against ascendant governments. Tracing the influence of this heritage on the past three decades of American social policy and church-state law, Daly finally untangles the radical beginnings of the faith-based initiative. In the process, he frees it from the narrow culture-war framework that has limited debate on the subject since Bush opened the White House Office for Faith-Based and Community Initiatives in 2001. A major contribution from an important new voice at the intersection of religion and politics, God's Economy points the way toward policymaking that combines strong social support with a new moral focus on the protection of families and communities.

God's Economy

In the past decade community groups have been portrayed as the solution to many social problems. Yet the role of 'below the regulatory radar' community action has received little research attention and thus is poorly understood in terms of both policy and practice. Focusing on self-organised community activity, this book offers the first collection of papers developing theoretical and empirically grounded knowledge of the informal, unregistered, yet largest, part of the voluntary sector. The collection includes work from leading academics, activists, policy makers and practitioners offering a new and coherent understanding of community action 'below the radar'. The book is part of the Third Sector Research Series which is informed by research undertaken at the Third Sector Research Centre, funded by the Economic and Social Research Council and Barrow Cadbury Trust.

Community groups in context

The Christian belief that God became incarnate in Jesus Christ to share the human condition with us challenges any absolute division between the spiritual and the material. To pray for daily bread and forgiveness of debts is to recognize that economics cannot be separated from faith. Yet this link is not an easy one to maintain. While the suffering of the poor and the devastation of the environment may anger us, the bewildering complexity of the global economy tempts us to conclude that economics must finally be left to the experts. This "primer for Christians" addresses the paralysis created by seeking simple answers to today's complex economic issues. Drawing on his experience in banking and economics as well as the ecumenical movement, the author provides lucid explanations of the major ideas, forces and realities of the global economy today.

Faith in a Global Economy

It is increasingly clear that there is a close interrelationship between the chronic debt of developing countries and imbalances in the global trading system. This collection of papers, from a conference organized by the Jesuit Centre for Faith and J

Debt and Trade

This is the first book to explore how religion, belief and spirituality are negotiated in hospice care. Specifically, it considers the significant place that spiritual care has in hospice care and claims that the changing role of religion and belief in society highlights the need to re-examine how such identities are integrated in professional practice. Using religious literacy as a framework, the author explores how healthcare professionals in hospice care respond to religion, belief and spiritual identities of service users. Part 1 provides a comprehensive account of the content and history of the place of religion, belief and spirituality in hospice care. Part 2 examines how these topics are negotiated in hospice care by looking at three key areas: environment, professional practice and organisation. Part 3 proposes a religious literacy model applicable to hospice care and explores implications for practice and policy. Lastly, the author identifies future trends in research, policy and practice. Drawing on a range of theories and concepts and proposing a working model that can impact the training of future and current professionals, *Religious Literacy in Hospice Care* should be considered essential reading for students, researchers and practitioners.

Religious Literacy in Hospice Care

This book is about what Mark Carney has called 'the social licence for financial markets' and how it can point us towards a more sustainable future. Author David Rouch argues that what it reveals contrasts sharply with the usual portrayals of markets as places of unrestrained financial self-interest. Drawing attention to a more complex reality and the presence of justice-focused aspirations in finance can positively impact individual, institutional, and systemic behaviour: change, not imposed by regulators, but emerging from the very substance of market relationships. The finance sector should have a key role in addressing humanity's increasingly pressing sustainability challenges. Yet the relationship between finance and society has not recovered from the 2008 crisis and the scandals and austerity that followed. The Covid-19 pandemic and its economic fallout is sharpening some of the issues and creating new ones. Recognising that financial markets operate subject to a social licence has the potential to galvanise market participants in tackling these challenges, strengthening social solidarity on which markets also depend, and to provide coordinates for navigating a way through the post-pandemic social, political and economic landscape.

The Social Licence for Financial Markets

This original book makes a timely and potentially controversial contribution both to the teaching of social policy and the wider debates surrounding it in Britain today. It offers a critical and theoretically sensitive overview of the role of religious values, actors and institutions in the development of state and non-state social welfare provision in Britain, combining historical discussion of the relationship between religion and social policy in Britain with a comparative theoretical discussion that covers continental Europe and North America. Grounded in new empirical research on religious welfare organisations from the nine major faiths in the UK, the book brings together all of these perspectives to argue for an analytical shift in the definition of wellbeing through a new concept called 'ways of being'. This reflects the moral, ideational and cultural underpinnings of social welfare. Written in a readable style, the book will appeal to students and tutors of social policy, as well as policy-makers seeking to inform themselves about the key issues surrounding faith-based welfare in modern Britain.

Religion and Faith-based Welfare

The current global financial crisis has raised awareness of the impact the world of finance has on the economy and the future of democracy. Following the crisis, this book aims at a deep understanding of the human psycho-social dynamics beneath the surface of the financial industry, its markets and institutions. It seeks to understand why the seemingly rational world of economic behavior, with its calculated models and predictions, at times goes horribly wrong. This book uses the discipline of socio-analysis to explore the meaning of money, markets and the broad financial world that so strongly affects our daily lives. Socio-analysis contributes to an awareness and understanding of underlying unconscious desires, fantasies and illusions that bring about the irrational inflation of faith and trust in the world of money, finance and capital(ism). The insight that the financial crisis 'was essentially psychological in origin' (Robert Shiller) and that the world of finance is broadly shaped if not determined by irrational often unconscious factors is not yet broadly shared. This book appears to be one of the first, if not the first contribution that explicitly focuses on what is beneath the surface of money, finance and capital. It invites the reader to explore the financial world in depth. The aim of this book is to provide businesses, organizational consultants, students, researchers and interested persons more broadly with a detailed exploration of the psycho-social dynamics of the financial industry as it exists currently within the capitalist system. The contributors to this book come from Australia, Denmark, France, Germany, Hungary, Sweden, The Netherlands, UK, and USA.

Towards a Socioanalysis of Money, Finance and Capitalism

With the departure of European Muslims to the "Islamic State" and a wave of terrorist attacks in Europe in recent years, the questions of why and how individuals radicalize to Jihadi extremism attracted keen interest. This thesis examines how individuals radicalize by applying a theoretical framework that primarily refers to social capital theory, the economics of religion, and social movement theory. The analysis of the biographical backgrounds, pathways of radicalization, and network connections of more than 1,300 Jihadi extremists from Germany, Austria, and Switzerland shows that radicalization primarily need to be considered as a social process of isolation from former social contacts and affiliation with a new religious group. Radicalization is characterized by the transformation of social capital and often channeled through so-called "strong ties" to friends and family members. These peer networks constitute the social fundament of radical clusters on the local level which are usually linked to a broader milieu through exclusive mosque communities and religious authorities. Bonding social capital within these radical groups minimizes the risk of betrayal and promotes trust essential for clandestine and risky activities.

The Dark Social Capital of Religious Radicals

An interdisciplinary study of the nature of money and its impact on our economic, social, political, legal and spiritual lives.

Capitalism, Socialism, and Democracy Revisited

Capitalism, Socialism and Democracy remains one of the greatest works of social theory written this century. When it first appeared the New English Weekly predicted that `for the next five to ten years it will certainly remain a work with which no one who professes any degree of information on sociology

or economics can afford to be unacquainted.' Fifty years on, this prediction seems a little understated. Why has the work endured so well? Schumpeter's contention that the seeds of capitalism's decline were internal, and his equal and opposite hostility to centralist socialism have perplexed, engaged and infuriated readers since the book's publication. By refusing to become an advocate for either position Schumpeter was able both to make his own great and original contribution and to clear the way for a more balanced consideration of the most important social movements of his and our time.

Capitalism and Democracy

Characteristically readable, controversial and full of insights, Alec Nove's new book is essential reading for anyone concerned with evaluating the relevance of Marxism to contemporary social and economic problems.

Capitalism, Socialism and Democracy

An expansive and ambitious intellectual history of democratic socialism from one of the world's leading intellectual historians and social ethicists The fallout from twenty years of neoliberal economic globalism has sparked a surge of interest in the old idea of democratic socialism--a democracy in which the people control the economy and government, no group dominates any other, and every citizen is free, equal, and included. With a focus on the intertwined legacies of Christian socialism and Social Democratic politics in Britain and Germany, this book traces the story of democratic socialism from its birth in the nineteenth century through the mid-1960s. Examining the tenets on which the movement was founded and how it adapted to different cultural, religious, and economic contexts from its beginnings through the social and political traumas of the twentieth century, Gary Dorrien reminds us that Christian socialism paved the way for all liberation theologies that make the struggles of oppressed peoples the subject of redemption. He argues for a decentralized economic democracy and anti-imperial internationalism.

The Real World of Democracy Revisited, and Other Essays on Democracy and Socialism

Capitalism is under attack. Defenders say that capitalism has raised billions of people from poverty. But a central activity of capitalism today, Wall Street style, is speculation (gambling), using other people's money, and privatizing the profits while socializing the debts. Skeptics argue that capitalism has redistributed the wealth of the planet in favor of a very few, meanwhile leaving the planet in bad shape and leaving billions of people out in the cold. Wealth is now extremely mal-distributed, opportunity is far from equal, and upward social mobility has declined significantly in recent decades. This book reviews the evidence and arguments pro and con in considerable detail. The evidence is mixed. The main virtue of capitalism is its emphasis on competition as a driver of innovation and, thus, of economic growth. It is true that economic growth has accelerated in recent centuries, and it is true that billions of people have been lifted from poverty. But it is not necessarily true that intense "winner take all" competition in the marketplace is the explanation for growth. Neoclassical economic theory posits that self-interest is the primary motive for all economic decisions, leaving little room for cooperation and even less for altruism. The theory applies to an unrealistic "model" of human behavior, known as Homo economicus or "economic man", whose characteristic activity is buying or selling. The reason for using the adjective word "social" -- as in socialism" or "social service" or "social democracy" -- is, essentially, to deny those postulates of standard economic theory. Real humans are not rational utility maximizers (whatever that is) and very often do things that are not in their own personal best interests. This can happen because other interests, such as family loyalty, professional, religious, or patriotic duty, may take precedence. Real people rarely behave like Homo economicus, who has rivals but no friends. He (or she) does not trust anyone, hence cannot cooperate with others, and can never create, or live in, a viable social system (or marriage). Yet social systems, ranging from families and tribes to firms, cities, and nations do (and must) exist or civilization cannot exist. A viable social system must not allow "winner takes all". It must reallocate some of the societal wealth being created by competitive activities to support the young, the old and the weak, because all of those people have equal rights, if not the same luck or the same skills. Both competition and cooperation have important roles to play. A hybrid capitalism involving both is the only viable solution. The book ends with a specific suggestion, namely Universal Basic Income, or UBI.

The Economics of Feasible Socialism Revisited

"Capitalism, Socialism, and Democracy Revisited is must reading for anyone who considers him- or herself a political economist, and it should also appeal to those probing the uncertainties of contemporary democratization." -- Philippe C. Schmitter, Stanford University.

Social Democracy in the Making

At the core of this book is the argument that, though the word "socialism" is widely held in disdain in the current discourse about the world's past and its future, the idea of socialism as collective rationality and popular democracy is far from dead.

Socialism and the Market: The natural economy

Not to repeat past mistakes: the sudden resurgence of a sympathetic interest in social democracy is a response to the urgent need to draw lessons from the history of the socialist movement. After several decades of analyses worthy of an ostrich, some rudimentary facts are being finally admitted. Social democracy has been the prevalent manner of organization of workers under democratic capitalism. Reformist parties have enjoyed the support of workers.

On Capitalism and Inequality

Combining a two volume work in one book, this edition deals with the theories of democracy which have developed during the past ten years as well as the theories which have their roots in Ancient Greece.

Capitalism, Socialism, and Democracy Revisited

The book 'Everything with Capitalism is not bad' is perhaps the first of its kind ever. Usually this has been a fashion for the intellectuals to counter capitalism at all levels especially by the influence of communism. But this book argues that there are a lot of good points in capitalism such as entrepreneurship, innovation and competition all of which may produce an energetic and intelligent community if it is practiced at social levels and thus these features can open the route of horizontal capitalism throughout the world. In spite of some critical estimates, this book throws light on its positive social and cultural implications as a result of which vertical capitalism and crony capitalism will come to an end and world will prosper at large. If I am asked as to what problems am I setting out to solve I can answer that I am presenting many good points of capitalism and thus pleading that capitalism, if somewhat reorganized, can be the alternative doctrine of the day. If one asks me as to what confusions do I wish to clarify, I want to clear that capitalism is not all-out bad; it has some good points as well that can economically and culturally benefit the human society. In the question of what previously unknown or unfortunately neglected story am I planning to tell, I must argue that positive cultural implications of capitalism are perhaps the untold story here. For the question as to how can be this book different from all other denominations of this topic I must say that all other books are absolutely critical about capitalism but this book has offered a mixed perception with special emphasis on its good points. This book matters to everyone from common people to statesman.

Capitalism, Socialism, and Democracy

"Raymond Williams: A Short Counter-Revolution amply demonstrates the continuing relevance of Williams's analysis, from the early 1980s, to our current situation. After thirty years of neoliberalism his insights still read as freshly and as incisively as they first did. Jim McGuigan's new chapter explicitly extends the lines of continuity from then to now, in a persuasive and at times appropriately critical way. Williams's concluding chapter, Resources for a Journey of Hope remains as inspiring, and as necessary, as ever." - Simon Dentith, University of Reading "It's great that Towards 2000 is revisited. Jim McGuigan's preface to this edition and his remarkable up-dating chapter A Short Counter Revolution draw upon a formidable range of references to illustrate why this work is as fresh and insightful today as it was 30 years ago." - Derek Tatton, www.raymondwilliamsfoundation.org.uk 'Culture,' wrote Raymond Williams, 'is one of the most complicated words in the English language.' Ironically, the most important British writer on culture in the post-war period is also one of the most poorly digested among today's readers. Originally conceived as the sequel to his 1961 The Long Revolution, Williams' 1983 title Towards 2000 has been unfairly classified as a period piece. With the permission of the Williams Estate, the book has been re-entitled A Short Counter-Revolution – Towards 2000 Revisited, with noted Williams expert Jim McGuigan adding a chapter that updates the original with a survey of developments since its publication, particularly concerning the impact of neoliberalism, a phenomenon sighted early

by Raymond Williams and named 'Plan X'. In this new edition, Jim McGuigan makes a totally convincing case to read the book as a contemporary classic. It remains an indispensable guide to: Power and inequality Class politics Post-industrial society Globalization The crisis in democracy

The Spiral of Capitalism and Socialism

Thoroughly revised, this new edition of *Critical Theory of Technology* rethinks the relationships between technology, rationality, and democracy, arguing that the degradation of labor--as well as of many environmental, educational, and political systems--is rooted in the social values that preside over technological development. It contains materials on political theory, but the emphasis has shifted to reflect a growing interest in the fields of technology and cultural studies.

Capitalism and Social Democracy

The "great dichotomy" between left and right has been a feature of pluralist politics since its emergence in modern times. Left and right are also central to the understanding of the political history of the twentieth century and may be gaining renewed visibility in the context of the current economic crisis, both in Europe and beyond. Should scholars think, once again, with and within the dichotomy, or can they think better beyond its strictures? The contributions to this volume provide answers to these and other questions in ways that are theoretically sound and empirically informed.

The Theory of Democracy Revisited

The last will and testament from America's preeminent social critic, the late Michael Harrington. The fascinating book encapsulates two centuries of American socialist tradition and addresses the future of democracy.

Everything with Capitalism is not Bad

"A blend of history, analysis, and theory, *Understanding Socialism* is an honest and approachable text that knocks down false narratives, confronts failures and challenges of various socialist experiments throughout history, and offers a path to a new socialism based on workplace democracy."--Amazon.com

Capitalism and Social Democracy

The rejection of Marxism by many theorists of the radical democratic project is dangerous, according to Hill, because it negates any insight into the place of practical reasoning in democratic struggle. She defends the notion of practical reasoning (or "praxis") primarily through a clarification of the Gramscian concept of hegemony, which offers a far better explanation of the formation of identity and the social than the post-Marxism of such theorists as Ernesto Laclau and Chantal Mouffe, a post-Marxism that wrongly detaches Gramscian insight from its Marxist materialist base.

Raymond Williams: A Short Counter Revolution

The myth of Prometheus has long served as a symbol of the industrialization and individualism of the modern world, yet Arthur Mitzman aims to demonstrate an alternative conception emphasizing creativity over productivity, and a harmonious union with nature rather than its technocratic conquest.

Transforming Technology

This is part two of a two-volume set. "Democracy is, in part, a debate about what democracy is. With *The Theory of Democracy Revisited*, Sartori offers an overview of classical and contemporary issues. All students of politics will find his arguments provocative, whether or not they agree with his conclusions." – Jean Bethke Eishtain, University of Massachusetts, Amherst

Left and Right

This electronic version has been made available under a Creative Commons (BY-NC-ND) open access license. The search for social democracy has not been an easy one over the last three decades. The economic crisis of the 1970s, and the consequent rise of neo-liberalism, confronted social democrats with difficult new circumstances: tax-resistant electorates, the globalisation of capital and Western deindustrialisation. In response, a new bout of ideological revisionism consumed social democratic parties. But did this revisionism simply amount to a neo-liberalisation of the Left or did it propose a

recognisably social democratic agenda? Were these ideological adaptations the only feasible ones or were there other forms of modernisation that might have yielded greater strategic dividends for the Left? Why did some social democratic parties feel it necessary to take their revisionism much further than others? In search of social democracy brings together prominent scholars of social democracy to address these questions. Focusing on the social democratic heartland of Western Europe (although Australia and the United States also figure in the analysis), it gives the first detailed assessment of how the new social democratic revisionism has fared in government. The book begins by considering the underlying causes of the end of social democracy's golden age and the magnitude of the challenges faced by social democratic parties after the 1970s. It then proceeds to examine detailed case studies of how particular social democratic parties responded to this changed political terrain. Finally, it contributes to a broader conversation about the future of social democracy by considering ways in which the political thought of 'third way' social democracy might be radicalised for the twenty-first century. The contributors offer a variety of perspectives – some are sceptical of social democracy's prospects, others more sanguine; some supportive of the performance of social democratic parties in government, others bitingly critical. But they are united by the conviction that the themes addressed in this book are crucial to understanding the current politics of the industrialised world and, in particular, to determining the feasibility of more egalitarian and democratic social outcomes than have been possible so far in the era of neo-liberalism.

The Politics of Democratic Socialism

"Capitalism and COVID-19: Time to Make a Democratic New World Order proposes the deepening of democracy in a post-capitalist world. It suggests that humans should be placed back in nature and nature back in humans and argues for a global environmental movement. The book maintains that the free market should serve people and planet - instead of people and planet serving the free market. It motivates for enabling the state in leading the transition to a post-capitalist world. A post-capitalist society should ensure planetary and peoples' well-being together with economic well-being. Economic science in its current ideological form should be revisited. Exiting capitalism requires the unity of workers of all countries. Capitalism and COVID-19: Time to Make a Democratic New World Order calls for reimagining and recreating the best of all possible worlds for present and future generations. In the final analysis Noel Chellam predicts and maintains that capitalism too shall pass!"--

CAPITALISM SOCIALISM AND DEMOCRACY.

The return to public assemblies and direct democratic methods in the wave of the global "squares movements" since 2011 has rejuvenated interest in forms of council organisation and action. The European council movements, which developed in the immediate post-First World War era, were the most impressive of a number of attempts to develop workers' councils throughout the twentieth century. However, in spite of the recent challenges to liberal democracy, the question of council democracy has so far been neglected within democratic theory. This book seeks to interrogate contemporary democratic institutions from the perspective of the resources that can be drawn from a revival and re-evaluation of the forgotten ideal of council democracy. This collection brings together democratic theorists, socialists and labour historians on the question of the relevance of council democracy for contemporary democratic practices. Historical reflection on the councils opens our political imagination to an expanded scope of the possibilities for political transformation by drawing from debates and events at an important historical juncture before the dominance of current forms of liberal democracy. It offers a critical perspective on the limits of current democratic regimes for enabling widespread political participation and holding elites accountable. This timely read provides students and scholars with innovative analyses of the councils on the 100th anniversary of their development. It offers new analytic frameworks for conceptualising the relationship between politics and the economy and contributes to emerging debates within political theory on workplace, economic and council democracy.

Socialism

Put together specially for students of democracy, this invaluable reader gathers key statements from political thinkers, explained and contextualised with editorial commentaries. This new edition includes a new introduction, new sections and 29 new readings published since the first edition. Arranged into four sections 'Traditional Affirmations of Democracy, Key Concepts, Critiques of Democracy and Contemporary Issues' it covers democratic thinking in a remarkably broad way. A general introduction highlights democracy's historical complexity and guides you through the current areas of

controversy. The extensive bibliography follows the same structure as the text to help you deepen your study.

Understanding Socialism

Revisiting Marx's Critique of Liberalism offers a theoretical reconstruction of Karl Marx's new materialist understanding of justice, legality, and rights through the vantage point of his widely invoked but generally misunderstood critique of liberalism. The book begins by reconstructing Marx's conception of justice and rights through close textual interpretation and extrapolation. The central thesis of the book is, firstly, that Marx regards justice as an essential feature of any society, including the emancipated society of the future; and secondly, that standards of justice and right undergo transformation throughout history. The book then tracks the enduring legacy of Marx's critique of liberal justice by examining how leading contemporary political theorists such as John Rawls, Jürgen Habermas, Axel Honneth, and Nancy Fraser have responded to Marx's critique of liberalism in the face of global financial capitalism and the hollowing out of democratically-enacted law. The Marx that emerges from this book is therefore a thoroughly modern thinker whose insights shed valuable light on some of the most pressing challenges confronting liberal democracies today.

Capitalism, Socialism, and Democracy

This book takes stock of the major economic and political challenges advanced capitalist democracies face today. It provides a synthetic view, allowing the reader to grasp the nature of key structural transformations and their consequences in terms of the politics of change, policy outputs, and outcomes.

The Politics of Democratic Socialism

Schraeder Alfred Stepan Mark Tessler Frédéric Volpi Lucan Way Frederic Wehrey Sean L. Yom

Hegemony and Education

The authors offer a fresh and persuasive resolution to the controversy arising out of these contrasting traditions. Focusing on advanced industrial countries, Latin America, and the Caribbean, they find that the rise and persistence of democracy cannot be explained either by an overall structural correspondence between capitalism and democracy or by the role of the bourgeoisie as the agent of democratic reform. Rather, capitalist development is associated with democracy because it transforms the class structure, enlarging the working and middle classes, facilitating their self-organization, and thus making it more difficult for elites to exclude them. Simultaneously, development weakens the landed upper class, democracy's most consistent opponent.

Prometheus Revisited

Leading experts on China offer their enlightening analysis on one of the most crucial and complex questions facing the future of international politics. Moving toward open markets and international trade has brought extraordinary economic success to China, yet its leadership still maintains an authoritarian grip over its massive population. From repressing political movements to controlling internet traffic, China's undemocratic policies present an attractive model for other authoritarian regimes. But can China continue its growth without political reform? In *Will China Democratize?*, Andrew J. Nathan, Larry Diamond, and Marc F. Plattner present valuable analysis for anyone wondering if, when or how China might evolve politically. Since the *Journal of Democracy's* very first issue in January 1990, which featured articles reflecting on the then-recent Tiananmen Square massacre, the *Journal* has regularly published articles about China and its politics. By bringing together the wide spectrum of views that have appeared in the *Journal's* pages—from contributors including Fang Lizhi, Perry Link, Michel Oksenberg, Minxin Pei, Henry S. Rowen, and Nobel laureate Liu Xiaobo—*Will China Democratize?* provides a clear view of the complex forces driving change in China's regime and society.

The Theory of Democracy Revisted - Part Two

Illuminating Social Life has enjoyed increasing popularity with each edition. It is the only book designed for undergraduate teaching that shows today's students how classical and contemporary social theories can be used to shed new light on such topics as the internet, the world of work, fast food restaurants, shopping malls, alcohol use, body building, sales and service, and new religious movements. A perfect complement for the sociological theory course, it offers 13 original essays by leading scholars in the

field who are also experienced undergraduate theory teachers. Substantial introductions by the editor link the applied essays to a complete review of the classical and modern social theories used in the book.

In search of social democracy

Democratization scholars believe that the next regional wave of transitions to democracy may unfold in East and Southeast Asia. In their introduction to the 1998 edition of *Democracy in East Asia*, Larry Diamond and Marc F. Plattner predicted that East Asia, with its remarkable diversity of political regimes, economies, and religions, would likely be the most critical arena in the global struggle for democracy, a prediction that has proven prescient. Although the recent political upheavals in the Middle East have understandably grabbed the world's attention, there is reason to doubt whether the overthrow of some authoritarian regimes there will lead to the establishment of stable democracies any time soon. On the other hand, East Asia, the world's most populous and economically dynamic region, already boasts several consolidated democracies and provides a fascinating laboratory for studies of both authoritarian resilience and the prospects for democratization. This updated volume, which features contributions by distinguished scholars in East Asian studies, will be welcomed by instructors and students in the field, particularly as U.S. foreign policy is in the process of undertaking a "pivot" toward Asia. *Democracy in East Asia* offers a comprehensive treatment of the political landscape in both Northeast and Southeast Asia, including discussions of China, Japan, South Korea, Taiwan, Indonesia, the Philippines, Malaysia, Singapore, Thailand, Cambodia, Laos, Vietnam, and Burma (Myanmar). Contributors: Larry Diamond, Marc F. Plattner, Francis Fukuyama, Minxin Pei, Yun-han Chu, Hyug Baeg Im, Thitinan Pongsudhirak, Dan Slater, Martin Gainsborough, Don Emmerson, Edward Aspinall, Mark Thompson, Benjamin Reilly, Joseph Wong, Chong-Min Park, Yu-tzung Chang

Capitalism and COVID-19

"Is Democracy in Decline? is a short book that takes up the fascinating question on whether this once-revolutionary form of government--the bedrock of Western liberalism--is fast disappearing. Has the growth of corporate capitalism, mass economic inequality, and endemic corruption reversed the spread of democracy worldwide? In this incisive collection, leading thinkers address this disturbing and critically important issue. Published as part of the National Endowment for Democracy's 25th anniversary--and drawn from articles forthcoming in the *Journal of Democracy*--this collection includes seven essays from a stellar group of democracy scholars: Francis Fukuyama, Robert Kagan, Thomas Carothers, Marc Plattner, Larry Diamond, Philippe Schmitter, Steven Levitsky, Ivan Krastev, and Lucan Way. Written in a thought-provoking style from seven different perspectives, this book provides an eye-opening look at how the very foundation of Western political culture may be imperiled"--

Council Democracy

Democracy

Family Care and Social Capital: Transitions in Informal Care

Becoming a caregiver is increasingly an inevitable experience for many people and, therefore, a likely life transition. Drawing on research and personal experiences of working with family caregivers, this book examines a range of family caregiving situations from across the life course. It seeks to capture the dynamics of caregiving in a number of common situations: caregiving during infancy, for adults who acquire a disability through accidents or illness, for older people with age-related issues, and caregiving by children and adolescent carers and grandparent carers. In drawing attention to key moments of vulnerability faced by family and informal caregivers, and by suggesting how to assist 'reconnection' at these moments, the book provides a guide for those working in the area of health, disability and care. Informal care is conceptualised as occurring within the context of personal interrelationships, these being nested within wider kin networks and linked with wider professional formal care networks. Informal care is seen both as an expression of social capital and as an activity that builds social capital. It is an indicator of resources of mutual support within social networks, and it has the effect of adding to the stock of social resources. The book makes a case, therefore, for facilitating the development of social capital by strengthening the capacity of informal caregivers and caregiver groups, and by improving the linkages with formal care organisations.

Italian Families and Social Capital

Social capital is on the public agenda. This title places it firmly in the family support agenda, by providing a thought-provoking overview of key issues affecting the intrinsic link between family support and social capital.

A New Agenda for Family Support

"Eleven fully updated chapters include entries on the links between health and discrimination, income inequality, social networks and emotion, while four all-new chapters examine the role of policies in shaping health, including how to translate evidence into action with multi-level interventions."

Social Epidemiology

As interest in social capital has grown over the past decade—particularly in public health—so has the lack of consensus on exactly what it is and what makes it worth studying. Ichiro Kawachi, a widely respected leader in the field, and 21 contributors (including physicians, economists, and public health experts) discuss the theoretical origins of social capital, the strengths and limitations of current methodologies of measuring it, and salient examples of social capital concepts informing public health practice. Among the highlights: Measurement methods: survey, sociometric, ethnographic, experimental The relationship between social capital and physical health and health behaviors: smoking, substance abuse, physical activity, sexual activity Social capital and mental health: early findings Social capital and the aging community Social capital and disaster preparedness Social Capital and Health is certain to inspire a new generation of research on this topic, and will be of interest to researchers and advanced students in public health, health behavior, and social epidemiology.

Social Capital and Health

This book provides timely insights into the lives of Polish migrants who have been settling in Norway with their partners and children, especially over the last decade. It brings together Polish and Norwegian scholars who shed light on the key areas of migrant family practices in the transnational space. The contributors critically assess social capital of those living mobile lives, discuss the role of institutions, as well as engage with the broad problematics of caring - both with regard to migrant children raised in Norway, and the elderly kin members left behind in Poland. Further, the authors tackle the question of the possibilities and constraints of integration, pointing to several areas of policy implications of transnationalism for both Poland and Norway.

Social Capital and Families of Children with Chronic Conditions

Understanding Family Support provides a definition of family support and a clear perspective on the role that it has in promoting the welfare of children and their families. Family support is a concept that has been used in a range of ways to describe various aspects of child welfare policy and practice. The authors argue that this weakens family support as an overarching child welfare paradigm. They present a unifying definition of family support along with ten principles and a series of reflective practice questions applicable to: legislation and policy; organisation, management and planning; direct work with children and families; and research and evaluation. This is an important resource for any professional engaged in policy development, service design, delivering or evaluation of family support, including social workers, residential care staff, community development workers, teachers, community police, human services managers, evaluators and policy makers.

Families and Social Capital

In the past decade the relationship between communities, children and families has inspired a wealth of research and policy initiatives because of a growing belief that the breakdown of families and communities is a significant factor in social problems, including child abuse and juvenile crime. The latest policy initiatives to tackle social problems have therefore targeted communities as well as high risk families. This title amalgamates the latest research on the relationship between children, families and communities and explores policy and practice implications. Material for practitioners and community development workers is also included. The book is divided into three parts: 1) theory 2) the effect of community on children, parents and families 3) interventions and policy implications.

Measuring the Social Capital of Children

Social Capital and Transnational South Asian Families

Reflects the interest in how older people are affected by social change which is currently a key theme in social science.

Transnational Polish Families in Norway

This is a qualitative study into the experiences of parents of disabled children in Iceland in the period 1974-2007. Hardly any formal support was available to these families in 1974. In 2007 the formal support system shaped by social and educational policy reflected almost "the state of the art". The study gives voice to the experiences of parents in seventy five extraordinary families in pursuit of ordinary lives. It explores their access to social capital and its impact. The findings resonate to some extent with less comprehensive studies in the Nordic countries, the Anglo-Saxon world and Northern Europe. The unique contribution of this book is that it specifically lifts the fathers' voices independently of the mothers'; it spans the period of 33 years when the welfare system and inclusive education was put in place; and it uses social capital theory in analysing support, concluding that social capital can be built as well as eroded or destroyed. The book speaks to the field of disability studies, human rights and policy workers and to parents, family and friends of disabled children everywhere.

Understanding Family Support

Why do some areas have a higher prevalence of mental illness than others? This book explores the concept of social capital & its implications for mental health policy. It reviews methods of measuring social capital, analyses the implications of research for future policy developments & makes recommendations for practice & research.

Children and Families in Communities

Family support is an increasingly important strategic approach to welfare services for children and families. This invaluable resource for all professionals engaged in the development and delivery of these services is underpinned by reflective practice values and structured around four themes: * conceptual frameworks and vocabulary (defining) * policy and organisational structures and processing (planning) * tools for creative practice (doing) * approaches to evaluation (measuring). Contributors from around the world provide international perspectives on core issues in family support. These include the importance of community, the role of statutory and voluntary agencies, youth advocacy, culturally appropriate family support, child protection, disability services and effective means of evaluation. Providing a combination of clear theoretical frameworks and practical guidance, with clear 'how to' messages and a strong emphasis on evaluation, this book will be of interest to social workers, care staff, teachers, community development and police officers, students, policy-makers, evaluators and all those working in all areas of family support.

Balancing work and family care: european experiences

The aim of this book is to disseminate the results of research, and to inform, inspire and create a platform for debate between practitioners, academics, researchers, trainers and facilitators interested in addressing community needs in terms of HIV/AIDS and support.

Social Capital

Written by an international team of experts, this comprehensive volume investigates modern-day family relationships, partnering, and parenting set against a backdrop of rapid social, economic, cultural, and technological change. Covers a broad range of topics, including social inequality, parenting practices, children's work, changing patterns of citizenship, multi-cultural families, and changes in welfare state protection for families. Includes many European, North American and Asian examples written by a team of experts from across five continents. Features coverage of previously neglected groups, including immigrant and transnational families as well as families of gays and lesbians. Demonstrates how studying social change in families is fundamental for understanding the transformations in individual and social life across the globe. Extensively reworked from the original Companion published over a decade ago: three-quarters of the material is completely new, and the remainder has been comprehensively updated.

Family and Community Life of Older People

Services for families and children are rightfully the focus of intense scrutiny and debate, and there is a clear need to establish a knowledge of which services work well. This volume provides a comprehensive overview of research evidence from the UK and USA on the effectiveness of selected child welfare interventions. It addresses the challenges of measuring effectiveness in child welfare and explains the policy context for child welfare service delivery. Leading international contributors summarize the evidence of effectiveness in each core area, and consider the impact on children's development, parenting capacity and the wider community. Critically, the book also draws out the implications of the evidence for policy, practice and service delivery as well as for future research. This book is essential reading for policy makers, practitioners and commissioners of services in child welfare as well as students and researchers.

Social Policy and Social Capital

A practice focused guide that assists social workers and others to support families who need help with the task of parenting their children. This support may be required because families are lacking informal networks of support or because of professional worries about the levels of care parents or other carers are providing for their children.

Social Capital and Mental Health

In recent years, there has been an explosion of research on the early origins of adult health. A growing body of evidence documents that maternal health before conception, prenatal and perinatal exposures, and conditions in childhood play critical roles in health over the life course. Scientific understanding of the multiple and interacting influences on child health and their role in later health continues to evolve rapidly, but greater attention to how families shape the conditions of early life that underlie childhood health is needed. This volume aims to advance understanding of this topic, with attention to mechanisms through which health disparities emerge and are sustained across the lifespan.

Family Support as Reflective Practice

Contemporary Western society is changing and, controversially, migration is often flagged up as one of the reasons why. The nature of population change challenges the conventional understandings of family forms and networks whilst multiculturalism poses challenges to our understanding of social change, families and social capital. This innovative book provides an overview of the emergence of new understandings of ethnicities, identities and family forms across a number of ethnic groups, family types, and national boundaries. Based on new empirical data from fairly distinct sets of transnational family networks in minority communities with a substantial presence in the United Kingdom – principally, Caribbean and Italian, but also drawing on others such as Indian – it examines their lived experiences and uses the concept of social capital to explore how these families manage to maintain close and meaningful links. Transnational Families discusses, explains and illustrates the substantial problems and issues confronted by communities and families, academics and policy-makers/implementers, and non-governmental organisations within a transnational world. It will be of interest to students and scholars of migration, transnationalism, families and globalisation.

Response-ability in the era of AIDS

The recent explosion in population aging across the globe represents one of the most remarkable demographic changes in human history. There is much concern about population aging and its consequences for nations, for governments, and for individuals. It has often been noted that population aging will inevitably affect the economic stability of most countries and the policies of most state governments. What is less obvious, but equally important, is that population aging will profoundly affect families. Who will care for the growing numbers of tomorrow's very old members of societies? Will it be state governments? The aged themselves? Their families? The purpose of this volume is to examine consequences of global aging for families and intergenerational support, and for nations as they plan for the future. Four remarkable social changes during the past fifty years are highlighted: (1) Extension of the life course: A generation has been added to the average span of life over the past century; (2) Changes in the age structures of nations: Most nations today have many more elders, and many fewer children, than fifty years ago; (3) Changes in family structures and relationships: Some of these differences are the result of trends in family structure, notably higher divorce rates and the higher incidence of childbearing to single parents; (4) Changes in governmental responsibilities: In the last decade, governmental responsibility appears to have slowed or reversed as states reduce welfare expenditures. How will families respond to twenty-first-century problems associated with population aging? Will families indeed be important in the twenty-first century, or will kinship and the obligations across generations become increasingly irrelevant, replaced by "personal communities"? This volume goes a considerable distance to answer these critical issues for the twenty-first century. Vern L. Bengtson is an AARP/University Chair in Gerontology and Professor of Sociology, University of Southern California. Ariela Lowenstein is associate professor and head, Department of Aging Studies, University of Haifa, Israel.

Measuring Social Capital

This book investigates the relationship between social capital and loneliness of older adults living in urban China during the COVID-19 outbreak period. It also tested the mediation role of community-based cognitive social capital on the relationship between community-based structural social capital and loneliness of older urban Chinese adults. This book targets at a broad audience with knowledge in social gerontology and social work with older adults. It will appeal to academic researchers, undergraduate and graduate students, policymakers, and social workers who have interests in social capital and mental well-being in later life, and the impacts of COVID-19 on the well-being of older adults.

The Wiley Blackwell Companion to the Sociology of Families

Meeting the needs of children at the same time as promoting family life is more than a question of resources: it needs a culture change in social services: a rediscovery and a modernization of the social action and community development traditions in social work. In *Social Action with Children and Families* the authors argue that ways must be found to work together to promote environments in which children can flourish, and to develop forms of public life which are friendly to children and their parents. Recent changes in child care systems have put more pressures on those working in it. Social workers have become more open to public scrutiny and are expected to respond to problems rooted in social and economic aspects of their clients' or services users' lives. Legislation stresses working in partnership with parents, other professionals, and community groups. The central aim of *Social Action with Children and Families* is to help those working in this field to find a new, more positive sense of direction and purpose. It will be invaluable reading to those studying social work, social policy and public administration as well as to all professionals working in these areas.

Enhancing the Well-being of Children and Families through Effective Interventions

This report reviews the literature on families, poverty and child outcomes, paying particular attention to three distinct themes that are relevant to child outcomes: the effect of long-term poverty, the Family Stress Model, and the role of neighbourhood social capital.

Effective Family Support

This book contains a number of papers presented at a workshop organised by the World Bank in 1997 on the theme of 'Social Capital: Integrating the Economist's and the Sociologist's Perspectives'. The concept of 'social capital' is considered through a number of theoretical and empirical studies which discuss its analytical foundations, as well as institutional and statistical analyses of the concept. It includes the classic 1987 article by the late James Coleman, 'Social Capital in the Creation of Human

Capital', which formed the basis for the development of social capital as an organising concept in the social sciences.

Families and Child Health

Published in 1998, the aim of this book is to identify and explore key themes and issues around the realm of welfare practice in child and family social work - that is, family centre services and related community-based types of provision. The text addresses the impact and effectiveness of family centres in supporting children, families and communities. Emphasis is placed on community based supportive/preventive family services and those that provide a closed access and therapeutic service aimed at families referred by social workers where children are at risk of abuse. Throughout, the focus is on best practice exemplified by research findings of family centre impacts and outcomes in the UK, the USA and Hong Kong.

Transnational Families

Social capital is a key concept in academic research and policymaking internationally. It focuses attention on social relationships, values, and access to resources in families, communities, regions and nations. But does the concept, with its focus on particular aspects of social life and the thrust of its influence on policy initiatives, hide more than it illuminates? Is it even harmful? Can social capital ideas be amended or adapted to bring other issues into view, or are there alternative concepts that are better able to address contemporary social, economic and political life? This edited collection brings together contributions, including from internationally renowned researchers, that assess social capital - as a theoretical concept, its shaping of policy development, and its practices in research and everyday life. Some reveal the conceptual lacks and policy drawbacks of social capital, and put forward alternatives. Others pursue mainstream models and their adaptation.

Global Aging and Its Challenge to Families

How do education and learning really impact on people's lives? The Benefits of Learning is a detailed, systematic and vivid account of the impact of formal and informal education on people's lives. Based on extended interviews with adults of all ages, it shows how learning affects their health, family lives and participation in civic life, revealing the downsides of education as well as the benefits. At a time when education is in danger of being narrowly regarded as an instrument of economic growth, this study covers: * the interaction between learning and people's physical and psychological well-being * the way learning impacts on family life and communication between generations * the effect on people's ability and motivation to take part in civic and community life. Packed with detail from adults' own accounts of their lives, the book reveals how learning enables people to sustain themselves and their communities in the face of daily stresses and strains, as well as sometimes transforming their lives. The book opens up new avenues for debate. It is a valuable resource for education researchers and of particular interest to education policy makers, adult education practitioners, health educators and postgraduate students in education.

Loneliness Among Older Adults During the COVID-19 Pandemic

The national income and product accounts that underlie gross domestic product (GDP), together with other key economic data—"price and employment statistics"—are widely used as indicators of how well the nation is doing. GDP, however, is focused on the production of goods and services sold in markets and reveals relatively little about important production in the home and other areas outside of markets. A set of satellite accounts—in areas such as health, education, volunteer and home production, and environmental improvement or pollution—would contribute to a better understanding of major issues related to economic growth and societal well-being. Beyond the Market: Designing Nonmarket Accounts for the United States hopes to encourage social scientists to make further efforts and contributions in the analysis of nonmarket activities and in corresponding data collection and accounting systems. The book illustrates new data sources and new ideas that have improved the prospects for progress.

Social Action with Children and Families

Family Support introduces and explores the state of the art in preventative social work with children and young people. Drawing on contemporary thinking and research, the book aims to make a contribution to

current debates about how we can best support families in need. Underpinning the book is an analysis of how family support is changing, having moved from 'prevention' through to contemporary debates about 'family support', 'early intervention' and 'early help'. The authors draw on their own practice experiences to ensure the discussion remains highly relevant to everyday realities. The book consists of three parts: Part I examines the history and context of family support; Part II outlines a number of practice approaches to family support; and Part III suggests how family support work can be further developed. The book provides 'think points' and case studies to support the reader in reflecting on the material presented and how this can be best applied, as well as including a guide to useful resources. Family Support will be a welcome companion for anyone involved in child welfare and safeguarding services, including students at undergraduate and post-graduate level, practitioners, policy makers and academics.

Poverty, Social Capital, Parenting and Child Outcomes in Canada

The recent explosion in population ageing across the globe represents one of the most remarkable demographic changes in human history. Population ageing will profoundly affect families. Who will care for the growing numbers of tomorrows very old members of societies? Will it be state governments? The aged themselves? Their families? The purpose of this book is to examine consequences of global aging for families and intergenerational support, and for nations as they plan for the future.

Social Capital

The chapters in this rich synthesis of National Survey of Child and Adolescent Well-Being data represent thoughtful and increasingly sophisticated approaches to the problems highlighted in the study and in child welfare research in general.

Towards a Theorised Understanding of Family Life and Social Capital

Diversity is an issue that is pervasive in this globalized world. As most countries are eager to ensure they are as diverse and inclusive as possible, broadening the hemispheres of diversity in the workplace is a crucial step. Consciously or unconsciously, individuals tend to change the way they treat coworkers in the workplace based on gender, age, and religion. In order for businesses across the globe to achieve inclusive workplace cultures, further study is required on the best practices, challenges, and strategies of implementing diversity into policy. Global Perspectives on Maintaining Gender, Age, and Religious Diversity in the Workplace captures insights into global perspectives on issues, challenges, and solutions for mitigating gender, age, and religious diversity-related matters in the workplace. The book aims to highlight policies and practices prevalent in a variety of sectors in different countries around the globe. Covering topics such as cross-cultural leadership, diversity policy, and wellbeing, this reference work is crucial for business owners, managers, human resources professionals, researchers, scholars, academicians, practitioners, instructors, and students.

Family Support and Family Centre Services

Once it was difficult to see end of life care beyond conventional medical intervention, but hospice and palliative care introduced a more holistic approach, providing quality of life for the dying and their families. This ground-breaking work takes end-of-life care beyond these palliative boundaries, describing a public health vision that involves whole communities adopting a compassionate approach to dying, death and loss. Written by a leading academic in the field of death and bereavement, this text outlines the historical, political and conceptual basis of compassionate cities, providing a community development model for end-of-life care. Moving away from infection control and health promotion Allan Kellehear invites us to think of a third wave movement of public health, joining empathy, equality and action together as practical policies. Presenting a radical new perspective to death, ageing and public health, Compassionate Cities is essential reading for academics and professionals alike.
