History of Architectural Conservation

A History of Architectural Conservation expands knowledge about the conservation of ancient monuments, works of art and historic buildings. It includes the origins of the interest in conservation within the European context, and the development of the concepts from Antiquity and the Renaissance to the present day. Jokilehto illustrates how this development has influenced international collaboration in the protection and conservation of cultural heritage, and how it has formed the principal concepts and approach to conservation and restoration in today's multi-cultural society. This book is based on archival research of original documents and the study of key restoration examples in countries that have influenced the international conservation movement. Accessible and of great interest to students and the general public it includes conservation trends in Europe, the USA, India, Iran and Japan.

The Short Selling (Amendment) (EU Exit) Regulations 2018

The J. Paul Getty Museum Journal

The J. Paul Getty Museum Journal has been published annually since 1974. It contains scholarly articles and shorter notes pertaining to objects in the Museum's seven curatorial departments: Antiquities, Manuscripts, Paintings, Drawings, Decorative Arts, Sculpture and Works of Art, and Photographs. The Journal includes an illustrated checklist of the Museum's acquisitions for the previous year, a staff listing, and a statement by the Museum's director outlining the year's most important activities. Volume 21 of the J. Paul Getty Museum Journal includes articles by John Walsh, Barbara C. Anderson, Ariel Herrmann, Jill Finsten, Lynn F. Jacobs, And Peter J. Holliday.

The Fabrica of Andreas Vesalius

The current work provides bibliographic information, a worldwide census, ownership records, and a description of the annotations in all the copies of Vesalius' Fabrica. It reconstructs the travels of the Fabrica across the globe since 1543 and its annotated readership.

Autophagy

Starting in the early 1970s, a type of programmed cell death called apoptosis began to receive attention. Over the next three decades, research in this area continued at an accelerated rate. In the early 1990s, a second type of programmed cell death, autophagy, came into focus. Autophagy has been studied in mammalian cells for many years. The recent

The Sexuality of Christ in Renaissance Art and in Modern Oblivion

Originally published in 1983, Leo Steinberg's classic work has changed the viewing habits of a generation. After centuries of repression and censorship, the sexual component in thousands of revered icons of Christ is restored to visibility. Steinberg's evidence resides in the imagery of the overtly sexed Christ, in Infancy and again after death. Steinberg argues that the artists regarded the deliberate exposure of Christ's genitalia as an affirmation of kinship with the human condition. Christ's lifelong virginity, understood as potency under check, and the first offer of blood in the circumcision, both required acknowledgment of the genital organ. More than exercises in realism, these unabashed images underscore the crucial theological import of the Incarnation. This revised and greatly expanded edition not only adduces new visual evidence, but deepens the theological argument and engages the controversy aroused by the book's first publication.

New Horizons in Spanish Colonial Law

<http://dx.doi.org/10.12946/gplh3> <http://www.epubli.de/shop/buch/48746> "Spanish colonial law, derecho indiano, has since the early 20th century been a vigorous subdiscipline of legal history. One of great figures in the field, the Argentinian legal historian Víctor Tau Anzoátegui, published in 1997 his *Nuevos horizontes en el estudio histórico del derecho indiano*. The book, in which Tau addressed seminal methodological questions setting tone for the discipline's future orientation, proved to be the starting point for an important renewal of the discipline. Tau drew on the writings of legal historians, such as Paolo Grossi, Antonio Manuel Hespanha, and Bartolomé Clavero. Tau emphasized the development of legal history in connection to what he called "the posture superseding rational and statutory state law." The following features of normativity were now in need of increasing scholarly attention: the autonomy of different levels of social organization, the different modes of normative creativity, the many different notions of law and justice, the position of the jurist as an artifact of law, and the casuistic character of the legal decisions. Moreover, Tau highlighted certain areas of Spanish colonial law that he thought deserved more attention than they had hitherto received. One of these was the history of the learned jurist: the *letrado* was to be seen in his social, political, economic, and bureaucratic context. The Argentinian legal historian called for more scholarly works on book history, and he thought that provincial and local histories of Spanish colonial law had been studied too little. Within the field of historical science as a whole, these ideas may not have been revolutionary, but they contributed

in an important way to bringing the study of Spanish colonial law up-to-date. It is beyond doubt that Tau's programmatic visions have been largely fulfilled in the past two decades. Equally manifest is, however, that new challenges to legal history and Spanish colonial law have emerged. The challenges of globalization are felt both in the historical and legal sciences, and not the least in the field of legal history. They have also brought major topics (back) on to the scene, such as the importance of religious normativity within the normative setting of societies. These challenges have made scholars aware of the necessity to reconstruct the circulation of ideas, juridical practices, and researchers are becoming more attentive to the intense cultural translation involved in the movement of legal ideas and institutions from one context to another. Not least, the growing consciousness and strong claims to reconsider colonial history from the premises of postcolonial scholarship expose the discipline to an unseen necessity of reconsidering its very foundational concepts. What concept of law do we need for our historical studies when considering multi-normative settings? How do we define the spatial dimension of our work? How do we analyze the entanglements in legal history? Until recently, Spanish colonial law attracted little interest from non-Hispanic scholars, and its results were not seen within a larger global context. In this respect, Spanish colonial law was hardly different from research done on legal history of the European continent or common law. Spanish colonial law has, however, recently become a topic of interest beyond the Hispanic world. The field is now increasingly seen in the context of "global legal history," while the old and the new research results are often put into a comparative context of both European law of the early Modern Period and other colonial legal orders. In this volume, scholars from different parts of the Western world approach Spanish colonial law from the new perspectives of contemporary legal historical research."

Offshore Energy Structures

This book provides all the key information needed to design offshore structures for renewable energy applications successfully. Suitable for practicing engineers and students, the author conveys design principles and best practices in a clear, concise manner, focusing on underlying physics while eschewing complicated mathematical detail. The text connects underlying scientific theory with industry standards and practical implementation issues for offshore wind turbines, wave energy converters and current turbines. Combined concepts such as wave-wind energy platforms are discussed, as well. Coverage of design codes and numerical tools ensures the usefulness of this resource for all those studying and working in the rapidly expanding field of offshore renewable energy.

Operations, Information and Technology

In this book, the reader will be presented with a series of studies dealing with some of the essential aspects of the functioning of any business: operations, information and technology. After an introduction to the basic understanding of those concepts, studies uncovering particular aspects of each of those elements will guide the reader towards a deeper understanding of the mechanisms and procedures behind each of those company components. With special attention to the value chain and to the role of information and knowledge creation in an industrial setting, the reader will gain the ability to systematically reason with the aid of those concepts in mind to create an organic view of competitive business management.

Metal Soaps in Art

This go-to reference work surveys the current state of knowledge in the field of metal soap-related degradation phenomena in art works. It contains detailed descriptions and images of the different phenomena and addresses the practical aspects of soap formation, preventive conservation, and treatment. The occurrence of metal soaps is one of the defining issues in the conservation of painted surfaces, and one that presently leaves innumerable open questions. It is estimated that around 70% of paintings in museum collections are affected by some form of metal soap-related degradation. In recent years, significant advances have been made in the detection and characterization of these compounds through interdisciplinary approaches including conventional spectroscopy and microscopy as well as emerging synchrotron-based techniques. This book for the first time captures a panoramic overview of the state of knowledge of metal soaps related to both scientific analysis and implications for conservation and treatment. It also critically examines open questions. The book is accessible to audiences with varied backgrounds (e.g. conservators, students of conservation science) while simultaneously presenting the technical details indispensable for academics and researchers active in this field.

Marine Biodiversity of Costa Rica, Central America

Life began in the sea, and even today most of the deep diversity of the planet is marine. This is often forgotten, especially in tropical countries like Costa Rica, renowned for their rain forests and the multitude of life forms found therein. Thus this book focusing on marine diversity of Costa Rica is particularly welcome. How many marine species are there in Costa Rica? The authors report a total of 6,777 species, or 3.5% of the world's total. Yet the vast majority of marine species have yet to be formally described. Recent estimates of the numbers of species on coral reefs range from 1–9 million, so that the true number of marine species in Costa Rica is certainly far higher. In some groups the numbers are likely to be vastly higher because to date they have been so little studied. Only one species of nematode is reported, despite the fact that it has been said that nematodes are the most diverse of all marine groups. In better studied groups such as mollusks and crustaceans, reported numbers are in the thousands, but even in these groups many species remain to be described. Indeed the task of describing marine species is daunting – if there really are about 9 million marine species and Costa Rica has 3.5% of them, then the total number would be over 300,000. Clearly, so much remains to be done that new approaches are needed. Genetic methods have enormous promise in this regard.

The ESC Textbook of Cardiovascular Medicine

The original idea for a conference on the "shapes of knowledge" dates back over ten years to conversations with the late Charles Schmitt of the Warburg Institute. What happened to the classifications of the sciences between the time of the medieval Studium and that of the French Encyclopedie is a complex and highly abstract question; but posing it is an effective way of mapping and evaluating long term intellectual changes, especially those arising from the impact of humanist scholarship, the new science of the seventeenth century, and attempts to evaluate, to apply, to reconcile, and to institutionalize these rival and interacting traditions. Yet such patterns and transformations cannot be well understood from the heights of the general history of ideas. Within the general framework of the organization of knowledge the map must be filled in by particular explorations and soundings, and our project called for a conference that would combine some encyclopedic (as well as interdisciplinary and international) breadth with scholarly and technical depth.

The Shapes of Knowledge from the Renaissance to the Enlightenment

This fully updated edition of Infectious Disease Surveillance is for frontline public health practitioners, epidemiologists, and clinical microbiologists who are engaged in communicable disease control. It is also a foundational text for trainees in public health, applied epidemiology, postgraduate medicine and nursing programs. The second edition portrays both the conceptual framework and practical aspects of infectious disease surveillance. It is a comprehensive resource designed to improve the tracking of infectious diseases and to serve as a starting point in the development of new surveillance systems. Infectious Disease Surveillance includes over 45 chapters from over 100 contributors, and topics organized into six sections based on major themes. Section One highlights the critical role surveillance plays in public health and it provides an overview of the current International Health Regulations (2005) in addition to successes and challenges in infectious disease eradication. Section Two describes surveillance systems based on logical program areas such as foodborne illnesses, vector-borne diseases, sexually transmitted diseases, viral hepatitis healthcare and transplantation associated infections. Attention is devoted to programs for monitoring unexplained deaths, agents of bioterrorism, mass gatherings, and disease associated with international travel. Sections Three and Four explore the uses of the Internet and wireless technologies to advance infectious disease surveillance in various settings with emphasis on best practices based on deployed systems. They also address molecular laboratory methods, and statistical and geospatial analysis, and evaluation of systems for early epidemic detection. Sections Five and Six discuss legal and ethical considerations, communication strategies and applied epidemiology-training programs. The rest of the chapters offer public-private partnerships, as well lessons from the 2009-2010 H1N1 influenza pandemic and future directions for infectious disease surveillance.

Infectious Disease Surveillance

Geomatics is a neologism, the use of which is becoming increasingly widespread, even if it is not still universally accepted. It includes several disciplines and techniques for the study of the Earth's surface and its environments, and computer science plays a decisive role. A more meaningful and appropriate expression is Geo-spatial Information or GeoInformation. Geo-spatial Information embeds topography in its more modern forms (measurements with electronic instrumentation, sophisticated techniques of

data analysis and network compensation, global satellite positioning techniques, laser scanning, etc.), analytical and digital photogrammetry, satellite and airborne remote sensing, numerical cartography, geographical information systems, decision support systems, WebGIS, etc. These specialized elds are intimately interrelated in terms of both the basic science and the results pursued: rigid separation does not allow us to discover several common aspects and the fundamental importance assumed in a search for solutions in the complex survey context. The objective pursued by Mario A. Gomarasca, one that is only apparently modest, is to publish an integrated text on the surveying theme, containing simple and comprehensible concepts relevant to experts in Geo-spatial Information and/or specially in one of the disciplines that compose it. At the same time, the book is rigorous and synthetic, describing with precision the main instruments and methods connected to the multiple techniques available today.

Basics of Geomatics

The two-volume set LNCS 3522 and 3523 constitutes the refereed proceedings of the Second Iberian Conference on Pattern Recognition and Image Analysis, IbPRIA 2005, held in Estoril, Portugal in June 2005. The 170 revised full papers presented were carefully reviewed and selected from 292 submissions. The papers are organized in topical sections on computer vision, shape and matching, image and video processing, image and video coding, face recognition, human activity analysis, surveillance, robotics, hardware architectures, statistical pattern recognition, syntactical pattern recognition, image analysis, document analysis, bioinformatics, medical imaging, biometrics, speech recognition, natural language analysis, and applications.

Pattern Recognition and Image Analysis

This book brings together a valuable collection of case studies and conceptual approaches that outline the present state of Amazonia in the 21st century. The many problems are described and the benefits, as well as the achievements of regional development are also discussed. The book focuses on three themes for discussion and recommendations: indigenous peoples, their home (the forest), and the way(s) to protect and sustain their natural home (biodiversity conservation). Using these three themes this volume offers a comprehensive critical review of the facts that have been the reality of Amazonia and fills a gap in the literature. The book will appeal to scholars, professors and practitioners. An outstanding group of experienced researchers and individuals with detailed knowledge of the proposed themes have produced chapters on an array of inter-related issues to demonstrate the current situation and future prospects of Amazonia. Issues investigated and debated include: territorial management; indigenous territoriality and land demarcation; ethnodevelopment; indigenous higher education and capacity building; natural resource appropriation; food security and traditional knowledge; megadevelopmental projects; indigenous acculturation; modernization of Amazonia and its regional integration; anthropogenic interventions; protected areas and conservation; political ecology; postcolonial issues, and the sustainability of Amazonia.

Indigenous Amazonia, Regional Development and Territorial Dynamics

This book gathers selected papers presented at the 2020 World Conference on Information Systems and Technologies (WorldCIST'20), held in Budva, Montenegro, from April 7 to 10, 2020. WorldCIST provides a global forum for researchers and practitioners to present and discuss recent results and innovations, current trends, professional experiences with and challenges regarding various aspects of modern information systems and technologies. The main topics covered are A) Information and Knowledge Management; B) Organizational Models and Information Systems; C) Software and Systems Modeling; D) Software Systems, Architectures, Applications and Tools; E) Multimedia Systems and Applications; F) Computer Networks, Mobility and Pervasive Systems; G) Intelligent and Decision Support Systems; H) Big Data Analytics and Applications; I) Human-Computer Interaction; J) Ethics, Computers & Security; K) Health Informatics; L) Information Technologies in Education; M) Information Technologies in Radiocommunications; and N) Technologies for Biomedical Applications.

Trends and Innovations in Information Systems and Technologies

This volume merges all geographical and paleogeographical data on all groups of the arachnofauna. The book features topics such as the ecological factors, climate and other barriers that influence the distribution of arachnida. It also elaborates on the characteristics of the distribution such as arachnida at high altitude (e.g. Himalaya), in caves, in polar regions and highlights differences between the arachnofauna of e.g. Mediterranean regions vs Central Europe, West African vs Indomalayan and more.

Furthermore, amongst other topics the volume also includes chapters on the systems of arachnida, fossil orders, dispersal and dispersion, endemics and relicts, regional arachnogeography, cave and high altitude arachnida.

Zoogeography of Arachnida

A companion to the Getty's prize-winning exhibition catalogue *Illuminating the Renaissance: The Triumph of Flemish Manuscript Painting in Europe*, this volume contains thirteen selected papers presented at two conferences held in conjunction with that exhibition. The first was organized by the Getty Museum, and the second was held at the Courtauld Institute of Art under the sponsorship of the Courtauld Institute and the Royal Academy of Arts. Added here is an essay by Margaret Scott on the role of dress during the reign of Charles the Bold. Texts include Lorne Campbell's research into Rogier van der Weyden's work as an illuminator, Nancy Turner's investigation of materials and methods of painting in Flemish manuscripts, and trenchant commentary by Jonathan Alexander and James Marrow on the state of current research on Flemish illumination. A recurring theme is the structure of collaboration in manuscript production. The essays also reveal an important new patron of manuscript illumination and address the role of illuminated manuscripts at the Burgundian court. A series of biographies of Burgundian scribes is featured.

Flemish Manuscript Painting in Context

This volume provides an in-depth introduction to 3D printing and biofabrication and covers the recent advances in additive manufacturing for tissue engineering. The book is divided into two parts, the first part on 3D printing discusses conventional approaches in additive manufacturing aimed at fabrication of structures, which are seeded with cells in a subsequent step. The second part on biofabrication presents processes which integrate living cells into the fabrication process.

3D Printing and Biofabrication

Now a major motion picture nominated for nine Academy Awards. Narrative of Solomon Northup, a Citizen of New-York, Kidnapped in Washington City in 1841, and Rescued in 1853. Twelve Years a Slave by Solomon Northup is a memoir of a black man who was born free in New York state but kidnapped, sold into slavery and kept in bondage for 12 years in Louisiana before the American Civil War. He provided details of slave markets in Washington, DC, as well as describing at length cotton cultivation on major plantations in Louisiana.

Twelve Years a Slave

Chikungunya and Zika Viruses: Global Emerging Health Threats is the go-to resource for both historical and current information on this important virus that is rapidly increasing its global range. Epidemics since 2005 have spread from Africa and Asia, and through Europe, and an ongoing epidemic has caused nearly two million cases in the Americas. It causes severe crippling arthritis, with symptoms lasting for months or years. As no vaccine or treatment is available, there is international interest in the virus, thus funding opportunities for research have dramatically increased. This book presents our understanding of the virus, bringing comprehensive knowledge in a single source. Provides a comprehensive collection of the state-of-the-art on CHIKV biology in a go-to reference book Edited by leaders in the field who provide a single, up-to-date source of information Gives a better understanding of the transmission and spread of chikungunya virus, a clear, coherent description of the outcomes of infection (both acute and chronic), and its biology and risk factors Pulls relevant background information to justify projects of many professionals developing vaccines and mosquito vector control approaches

Chikungunya and Zika Viruses

Exploring the extent to which the control over the materiality of writing has shaped the numerous and complex processes of cultural exchange from the 16th century onwards, this book introduces the specifics of written culture anchored in colonial contexts.

Written Culture in a Colonial Context

This is the first cultural history of Baroque Dresden, the capital of Saxony and the most important Protestant territory in the Empire from the mid-sixteenth to the early eighteenth century. Helen Watanabe-O'Kelly shows how the art patronage of the Electors fits into the intellectual climate of the

age and investigates its political and religious context. Lutheran church music and architecture, the influence of Italy, the cabinet of curiosities and the culture of collecting, alchemy, mining and early technology, official image-making and court theatre are some of the wealth of colourful subjects dealt with during the period 1553 to 1733.

Court Culture in Dresden

Bernini was the greatest sculptor of the Roman baroque. This book analyzes the modeling techniques, gilding and latent fingerprints and composition of the clay in 15 of his works in Harvard's Fogg Art Museums.

Sketches in Clay for Projects by Gian Lorenzo Bernini

This book contributes to the current discussion on climate change by presenting selected studies on the ways in which past human groups responded to climatic and environmental change. In particular, the chapters show how these responses are seen in the animal remains that people left behind in their occupation sites. Many of these bones represent food remains, so the environments in which these animals lived can be identified and human use of those environments can be understood. In the case of climatic change resulting in environmental change, these animal remains can indicate that a change has occurred, in climate, environment and human adaptation, and can also indicate the specific details of those changes.

Climate Change and Human Responses

Gathering Time presents the results of a major dating programme that re-writes the early Neolithic of Britain by more accurately dating enclosures, a phenomenon that first appeared in the early Neolithic: places of construction, labour, assembly, ritual and deposition. The project has combined hundreds of new radiocarbon dates with hundreds of existing dates, using a Bayesian statistical framework. Such formal chronological modelling is essential if significantly more precise and robust date estimates are to be achieved than those currently available from informal inspection of calibrated radiocarbon dates. The resulting dating project included over 35 enclosures - the largest study so far attempted in a Bayesian framework. This establishes a new chronology for causewayed and related enclosures in southern Britain, which appeared in the final decades of the 38th century cal BC, increased in number dramatically in the 37th century cal BC, and began no longer to be built by the end of the 36th century cal BC. Several enclosures were of short duration - in some cases probably in use for less than a generation - though some examples do conform to the conventional assumption of a long primary use-life. In Ireland, enclosures of this kind are much scarcer. The project helped to date two of these: Donegore, Co. Antrim and Magheraboy, Co. Sligo. As well as establishing a new chronology for enclosures, Gathering Time also places these results into their wider context, by considering the chronology of the early Neolithic as a whole. Well over a thousand other radiocarbon dates have been critically assessed and modelled in a Bayesian framework - for settlement, monument building and other activity, region by region across southern Britain and across Ireland as a whole (a brief comparative study of Scotland as far north as the Great Glen is also included). Generally in southern Britain other Neolithic activity can be dated before the beginnings of monument building and, among the monuments, long barrows, long cairns, and related forms clearly preceded the earliest causewayed enclosures. The first Neolithic things and practices probably appeared in south-east England in the 41st century cal BC, arguably by some kind of small-scale colonisation from the adjacent continent, and spread at a variable pace across the rest of Britain and Ireland over the next two and a half centuries or more, a process involving acculturation of local people as well as immigrants. Enclosures may have been adapted as a social strategy of harnessing the power of the distant and the exotic, and perhaps old ancestral ties to the European continent, in a dynamic and rapidly changing social milieu. Close attention is given to themes of deposition, material culture and different kinds of social interaction, from networks of exchange to episodes of violence. A high tempo of change continued, as very different constructions came to be built from the 36th century cal BC onwards: the linear and more arcane cursus monuments. The study of Irish Neolithic chronology reveals significant patterning, including a short currency for rectangular timber houses in the 37th century cal BC, but also highlights the challenge of establishing more reliable chronologies, for monuments in particular. Alternative scenarios for the date and nature of the beginning of the Neolithic in Ireland are modelled. Gathering Time ends with reflections on the nature and pace of change in prehistory. If generational timescales are now within our grasp routinely,

more subtle and individualised kinds of (pre)history can and must be written, and the conventional frame of the long-term must shift from being familiar and comfortable to problematic.

Gathering Time

In *Clinical Bioinformatics, Second Edition*, leading experts in the field provide a series of articles focusing on software applications used to translate information into outcomes of clinical relevance. Recent developments in omics, such as increasingly sophisticated analytic platforms allowing changes in diagnostic strategies from the traditional focus on single or small number of analytes to what might be possible when large numbers or all analytes are measured, are now impacting patient care. Covering such topics as gene discovery, gene function (microarrays), DNA sequencing, online approaches and resources, and informatics in clinical practice, this volume concisely yet thoroughly explores this cutting-edge subject. Written in the successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and easily accessible, *Clinical Bioinformatics, Second Edition* serves as an ideal guide for scientists and health professionals working in genetics and genomics.

Clinical Bioinformatics

This Reference Work provides a comprehensive overview of bioactive compounds found in underutilized fruits and nuts around the world and it elucidates their pharmacological, biological and health effects. In this book, readers will learn about the potential applications of bioactive molecules presented in several underutilized fruits and nuts rich in carbohydrates, lipids, fats, proteins, polyphenols, carotenoids, vitamins, organic acids, and volatile compounds. Readers will also discover more about the nutraceutical importance of these underutilized crops, and will also find specific case studies of the therapeutic potential of underutilized fruits and nuts. Written by highly renowned scientists of the field, this reference work appeals to a wide readership, from students and researchers to healthcare and industry professionals interested in plant biotechnology, biology, pharmacology and food engineering.

Bioactive Compounds in Underutilized Fruits and Nuts

This series of books, which is published at the rate of about one per year, addresses fundamental problems in materials science. The contents cover a broad range of topics from small clusters of atoms to engineering materials and involve chemistry, physics, materials science, and engineering, with length scales ranging from Ångströms up to millimeters. The emphasis is on basic science rather than on applications. Each book focuses on a single area of current interest and brings together leading experts to give an up-to-date discussion of their work and the work of others. Each article contains enough references that the interested reader can access the relevant literature. Thanks are given to the Center for Fundamental Materials Research at Michigan State University for supporting this series. M. F. Thorpe, Series Editor E-mail: thorpe@pa.msu.edu East Lansing, Michigan V PREFACE It is hard to believe that not quite ten years ago, namely in 1991, nanotubes of carbon were discovered by Sumio Iijima in deposits on the electrodes of the same carbon arc apparatus that was used to produce fullerenes such as the “buckyball”. Nanotubes of carbon or other materials, consisting of hollow cylinders that are only a few nanometers in diameter, yet up to millimeters long, are amazing structures that self-assemble under extreme conditions. Their quasi-one-dimensional character and virtual absence of atomic defects give rise to a plethora of unusual phenomena.

Science and Application of Nanotubes

The most comprehensive book ever written on leatherback sea turtles. Weighing as much as 2,000 pounds and reaching lengths of over seven feet, leatherback turtles are the world's largest reptile. These unusual sea turtles have a thick, pliable shell that helps them to withstand great depths—they can swim more than one thousand meters below the surface in search of food. And what food source sustains these goliaths? Their diet consists almost exclusively of jellyfish, a meal they crisscross the oceans to find. Leatherbacks have been declining in recent decades, and some predict they will be gone by the end of this century. Why? Because of two primary factors: human redevelopment of nesting beaches and commercial fishing. There are only twenty-nine index beaches in the world where these turtles nest, and there is immense pressure to develop most of them into homes or resorts. At the same time, longline and gill net fisheries continue to overwhelm waters frequented by leatherbacks. In *The Leatherback Turtle*, James R. Spotila and Pilar Santidrián Tomillo bring together the world's leading

experts to produce a volume that reveals the biology of the leatherback while putting a spotlight on the conservation problems and solutions related to the species. The book leaves us with options: embark on the conservation strategy laid out within its pages and save one of nature's most splendid creations, or watch yet another magnificent species disappear.

The Leatherback Turtle

The High Energy Accelerator Conference has always been the monitor of the state of the art and the new trends in planning, construction and operation of large particle accelerators. It is held every three years. The 1992 conference is devoted to High Energy Hadron Accelerators and Colliders, Linear Colliders, eze{ Storage Rings and related Technologies for these machines. In addition to status reports and contributed papers, the program features twelve survey talks which include summaries of individual poster papers.

High Energy Accelerators (Heacc 92) - Proceedings Of The Xv International Conference (In 2 Volumes)

Transhumance is a form of pastoralism that has been practised around the world since animals were first domesticated. Such seasonal movements have formed an important aspect of many European farming systems for several thousand years, although they have declined markedly since the nineteenth century. Ethnographers and geographers have long been involved in recording transhumant practices, and in the last two decades archaeologists have started to add a new material dimension to the subject. This volume brings together recent advances in the study of European transhumance during historical times, from Sweden to Spain, Romania to Ireland, and beyond that even Newfoundland. While the focus is on the archaeology of seasonal sites used by shepherds and cowherds, the contributions exhibit a high degree of interdisciplinarity. Documentary, cartographic, ethnographic and palaeoecological evidence all play a part in the examination of seasonal movement and settlement in medieval and post-medieval landscapes. Notwithstanding the obvious diversity across Europe in terms of livestock, distances travelled and socio-economic context, an extended introduction to the volume shows that cross-cutting themes are now emerging, including mobility, gendered herding, collective land-use, the agency of non-elite people and competition for grazing and markets. The book will appeal not only to archaeologists, but to historians, geographers, ethnographers, palaeoecologists and anyone interested in rural lifeways across Europe.

Historical Archaeologies of Transhumance across Europe

Completely updated and revised, and synthesizing the recent explosion in animal welfare literature, the sixth edition of this best-selling textbook continues to provide a thorough overview of behaviour and welfare of companion and farm animals, including fish. The introductory section has been completely revised, with all following chapters updated, redesigned and improved to reflect our changing understanding. Written by a world-leading expert and key opinion leader in animal behaviour and welfare, this text provides a highly accessible guide to the subject. It is an essential foundation for any veterinary, animal science, animal behaviour or welfare-focused undergraduate or graduate course.

Manual of the Judge Advocate General

Since 1979 Ars Electronica has tracked and analyzed the digital revolution and its multiple impacts. The focus has always been on processes and trends combining art, technology, and society. Results of this artistic and scientific research can be seen in the form of an annual festival in Linz, Austria, where a five-day-long program involves conferences, podium discussions, workshops, exhibitions, performances, interventions, and concerts. The festival is planned, organized, and executed in collaboration with artists and scientists from around the world. A variety of controversial futuristic themes are always the center of attention. Richly illustrated and containing in-depth essays, this book is a companion to the 37th Ars Electronica Festival.00Exhibition: 37th Ars Electronica Festival, Linz, Austria (05.09.09.2019).

Broom and Fraser's Domestic Animal Behaviour and Welfare 6th Edition

The psychological and religious implications of alchemy were Jung's major preoccupation during the last thirty years of his life. The essays composing the present volume complete the publication of his alchemical researches, to which three entire volumes have been devoted ^DDL the monumental *Mysterium Coniunctionis*, *Psychology and Alchemy*, and *Aion* ^DDL besides shorter papers in other

volumes. This collection of shorter Alchemical Studies has special value as an introduction to Jung's work on alchemy. The first study, on Chinese alchemy, marked the beginning of his interest in the subject, and was originally published in a volume written jointly with Richard Wilhelm. The other four are now published for the first time completely in English.

Out of the Box

The development of the use of computers and software in art from the Fifties to the present is explained. As general aspects of the history of computer art an interface model and three dominant modes to use computational processes (generative, modular, hypertextual) are presented. The "History of Computer Art" features examples of early developments in media like cybernetic sculptures, computer graphics and animation (including music videos and demos), video and computer games, reactive installations, virtual reality, evolutionary art and net art. The functions of relevant art works are explained more detailed than usual in such histories.

Alchemical Studies

Documenting the 42nd iteration of the festival, in hybrid format For only the second time in its 40 years, the Ars Electronica Festival migrated to a hybrid format for its annual proceedings. The theme of this festival was: "how can artistic and scientific research make connections between technology, art and society visible?"

Brave Man Fallen: The Story of the Man, His Crew, Their Planes and His Final Mission, Regensburg, Germany, 25 February 1944

Merriam Press World War 2 Biography. This is the story of Voynik's boyhood idol, Pete Rosko, who became a bombardier aboard a B-17 Flying Fortress during 1944, flying from Deopham Green Airbase, England, with the 452nd Bomb Group, U.S. Eighth Army Air Force. Included is the bombardier's personal war diary as well as biographies and memories of the three surviving crew members. A

moving tribute to those who served in the Eighth Air Force and died, and to the few who survive today. This includes the mission diary of "F.W." Stoldt, the ball turret gunner, who passed away on 24 May 2004, additional details from Tom Dickenson, co-pilot, who passed away on 11 July 2004, and from the family of the late Placido Andrade, including many photos of the crew and aircraft. In addition, the publisher's files have been utilized to add numerous other images that depict what life was like for a B-17 bomber crew, from mission start to end. 88 photos, 1 cutaway drawing, 3 documents, 5 full-color insignia illustrations.

Brave Man Fallen

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

An Eulogium of the Brave Men Who Have Fallen in the Contest With Great-Britain

An exciting epic fantasy for readers who enjoy Mark Lawrence and Peter V Brett. Honor, glory and pride are the qualities brothers Castor and Pollox value above all else. But when war is declared, they have to fight in a battle that threatens to not just wound them physically, it could break them mentally as well.

Brave Men Die

The 18th century was a wealth of knowledge, exploration and rapidly growing technology and expanding record-keeping made possible by advances in the printing press. In its determination to preserve the century of revolution, Gale initiated a revolution of its own: digitization of epic proportions to preserve these invaluable works in the largest archive of its kind. Now for the first time these high-quality digital copies of original 18th century manuscripts are available in print, making them highly accessible to libraries, undergraduate students, and independent scholars. Delve into what it was like to live during the eighteenth century by reading the first-hand accounts of everyday people, including city dwellers and farmers, businessmen and bankers, artisans and merchants, artists and their patrons, politicians and their constituents. Original texts make the American, French, and Industrial revolutions vividly contemporary. ++++ The below data was compiled from various identification fields in the bibliographic record of this title. A Great Man Fallen!

Part one of an exciting epic fantasy series written by an exciting new voice in Australian epic fantasy. For fans of Mark Lawrence and Peter V Brett. Castor and Pollux Fallon are members of the Buckthorne military, and have been since their mother handed the unruly little bastards into the care of the Baron after their father's death. When the Kyzantine Empire attacks the Murukan outposts in the Callisto Mountains, the brothers answer the call to war. Behind the front-line battle scenes are brutal assassinations, political backstabbing and the re-emergence of a dark power long thought eradicated from the land. The conflict escalates, all the while forcing each brother to make another difficult decision between sacrifice and duty until the day that the toll is unbearable ... and there is only one type of sacrifice left. **Shortlisted for the NSW Writers Centre Genre Fiction Award **

An Eulogium of the Brave Men who Have Fallen in the Contest with Great-Britain

Excerpt from The Fallen Brave: Biographical Memorial of the American Officers Who Have Given Their Lives for the Preservation of the Union While our land was teeming with plenty, busy with the hum of industry, and looking hopefully forward to the glorious future before it, a chasm suddenly yawned in its midst, threatening destruction to our Republic. Curtius-like, many a brave man has plunged in, glad to offer his life, his arms, and his courage, if the sacrifice could close the abyss, and restore union to

the land. Rome embalmed in eternal benediction the memory of her Curtius, shall we be less grateful to a Ward, a Lyon, a Baker, an Ellsworth, a Winthrop, a Lowe, a Cameron, a Haggerty, or the other noble officers who have reckoned their lives as naught in the hour of our country's peril? About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

An Eulogium of the Brave Men Who Have Fallen in the Contest with Great-Britain

Tony Burroughs was a young man living in Hawaii, when an older philosopher sage took him under his wing and became his mentor at an exotic fruit farm on the big island. Over a period of ten years, Tony learned how to farm as well as "The Information," a series of oral lessons, comprising a body of deep teachings about the very meaning of life, the history of mankind, and how to not just exist but to evolve and live a meaningful life filled with love, peace and abundance. A core teaching was in regard to intention-setting and Tony and two friends started a weekly circle to try it out. This first humble circle of three people had dramatic and life-changing effects that have resulted in Tony Burrough's life-long mission to guide others in the art of manifesting the best in themselves, their lives, and for the highest good of all. The tenet of Get What You Want is simple, powerful and profound: "that which you are reaching toward is also reaching out toward you." And, for the first time, Tony has gathered many of the key teachings of "The Information" into one book. Get What You Want shows how to set your intention to have that which you desire come to you as easily and effortlessly as possible.

Brave Men Die

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Day's Collacon: an Encyclopaedia of Prose Quotations

Reproduction of the original: Vermont Riflemen in the War for the Union 1861 to 1865 by Y.W. Ripley

The Cambrian

A Brave Man Seven Storeys Tall is an exuberant literary debut--a novel of real ideas and a playful examination of our in-between world, one that explores the nature of family, identity, art, and belief while also marking the introduction of an original new voice in contemporary fiction. Owen Burr is the six-foot-eight, Olympics-bound senior captain of the Stanford University water polo team. In his final collegiate match, however, he suffers a catastrophic injury that destroys his hopes and dreams, flattening his entire world into two dimensions. His identity as an athlete erased but his ambition indelible, he defies his father, a classics professor who lives in a "cave" of his own making, and moves to Berlin with naive plans to make conceptual art. Then he disappears. Without a single clue as to his son's location, Dr. Burr embarks upon a tour of public lectures from Greece to Germany to Iceland in an attempt to draw out his endangered son. Instead, he foments a violent uprising.
