With Healing Hands

Early in the Vietnam War the South Vietnamese government appealed to the United States and its allies, including Australia, for desperately needed medical help. Most of the country's doctors had been conscripted into the army and the civilian population was facing a medical crisis. From October 1964 until the end of 1972 over 450 surgeons, nurses, and other medical specialists from Australian hospitals volunteered to work in South Vietnam. In the towns of Long Xuyen, Bien Hoa, Vung Tau, and Ba Ria they brought expert medical care, comfort and support to a war-weary and traumatized civilia.

War Wounds

The history of warfare and the history of medicine are closely intertwined. War has been an accelerator of advances in medical treatment and surgery. As modern weaponry became more destructive, medicine developed techniques and procedures to deal with the volume and nature of battlefield casualties. Preventative medicine has also increased the effectiveness of fighting forces through improvements in soldiers' health and disease resistance. This book is a collection of chapters by historians, medical practitioners and researchers, former and serving military medical officers, surgeons, nurses and veterans, who explore the impact of war, wounds and trauma through the historical record, reported narratives and personal experiences. The book includes major sections on World War One (including chapters on shell shock and plastic surgery), World War Two (including a chapter on the Nazi death camps), the Vietnam War (including chapters on Agent Orange and sexually transmitted diseases), together with chapters on the Korean War and the current conflict in Afghanistan. In addition, the book includes several personal stories in which veterans describe their experiences of injury and recovery. War Wounds is a truly unique book, which offers considerable insights into an aspect of war that is often mentioned but seldom examined as it is here. Medical professionals, military personnel and the general public will all find it a remarkably revealing read.

Witnesses To War

Witnesses to War is a landmark history of Australian war journalism covering the regional conflicts of the nineteenth century to the major conflicts of the twentieth: World War I, World War II, Vietnam and Bosnia through to recent and ongoing wars in Iraq and Afghanistan. Fay Anderson and Richard Trembath look at how journalists reported the horrors and politics of war, the rise of the celebrity journalist, issues of censorship and the ethics of 'embedding'. Interviews with over 40 leading journalists and photographers reveal the challenges of covering wars and the impact of the violence they witness, the fear and exhilaration, the regrets and successes, the private costs and personal dangers. Witnesses to War examines issues with continued and contemporary relevance, including the genesis of the Anzac ideal and its continued use; the representation of enemy and race and how technology has changed the nature of conflict reporting.

New Perceptions of the Vietnam War

The effects of the War outside present-day Vietnam are ongoing. Substantial Vietnamese communities in countries that participated in the conflict are contributing to renewed interpretations of it. This collection of new essays explores changes in perceptions of the war and the Vietnamese diaspora, examining history, politics, biography and literature, with Vietnamese, American, Australian and French scholars providing new insights. Twelve essays cover South Vietnamese leadership and policies, women and civilians, veterans overseas, smaller allies in the war (Australia), accounts by U.S., Australian and South Vietnamese servicemen as well as those of Indigenous soldiers from the U.S. and Australia, memorials and commemorations, and the legacy of war on individual lives and government policy.

Here, There and Away

Here, There & Away is a unique collection of entertaining stories from the families who support our service men and women. Spanning the three branches of the Australian Defence Force this is a literary first. The stories cover the period from World War I to more recent times, and celebrate the love, care and support given by and to members of the wider defence family as well as the resilience required in diverse locations and situations. Some stories will tug at the heart strings while others are funny in the extreme. Many touch on significant historical events. There are a number of stories that will surprise and enlighten – all within a gentler context than the normal genre of military history. The reader will be left pondering and maybe even enticed to further explore some aspects of Australian military history. The stories in Here, There & Away poignantly depict the ups and downs of everyday life for military families in times of war and peace, but they also reflect many aspects of life experienced by the wider community. This collection is an important contribution to Australian social and military history, and an entertaining and uplifting book for readers of all ages.

Historical Dictionary of Australia

This fourth edition of Historical Dictionary of Australia covers its history through a chronology, an introductory essay, appendixes, and an extensive bibliography. The dictionary section has over 500 cross-referenced entries on important personalities, politics, economy, foreign relations, religion, and culture.

Unending War

Malaria is not only the greatest killer of humankind, the disease has been the relentless scourge of armies throughout history. Malaria thwarted the efforts of Alexander the Great to conquer India in the fourth century BC. Malaria frustrated the ambitions of Attila the Hun and Genghis Khan to rule all Europe in the fourth and thirteenth centuries AD; and malaria stymied Napoleon Bonaparte's plan to conquer Syria at the end of the eighteenth century. Malaria has also been the Australian Army's continuing implacable foe in almost all its overseas deployments formation of the Australian Army in 1901. On at least three occasions malaria has halted Australian Army operations, bringing it to a standstill and threatening its defeat. The first time was in Syria in 1918, when a malaria epidemic cut a swathe through the Australian-led Desert Mounted Corps. The second time was in Papua New Guinea in 1942–43, when the Army was fighting malaria as well as the Japanese. The third time was in Vietnam in 1968, when malaria caused more casualties than did enemy action. Indeed the Australian Army has been fighting 'an unending war' against malaria ever since the Boer War at the end of the nineteenth century. The struggle against the disease continues 115 years later because virtually

all Army's overseas deployments are to malarious regions. Fortunately for Australian troops serving in nations where malaria is endemic, the Australian Army Malaria Institute undertakes the scientific research necessary to protect our service personnel against the disease. Ian Howie-Willis, in this very readable book, tells the dramatic story of the Army's long and continuing struggle against malaria. It breaks new ground by showing how just one disease, malaria, is as much the serving soldier's foe as any enemy force.

Mud & Dust

From one of the great commemorative institutions in the world comes this historic vehicle collection. In association with the Australian War Memorial, Mud & Dust showcases stunning photographs of army vehicles in action, with detailed colour scheme notes, internal features and stories from their war record. It also includes the stories of those who drove and serviced the vehicles and brings the wars they fought in into a new dimension.

Vietnam

Vietnam: Or War - Our Peace brings together 44 stories from the Vietnam veteran's community.

War Surgery

Accompanying CD-ROM contains graphic footage of various war wound surgeries.

Australian Women and War

Sourced from Oppenheimer's own research and archival material from the Australian War Memorial, Australian Red Cross archives and State Libraries, Australian Women and War contains accounts of women such as Nursing Sister Nellie Gould in the Boer War and Angela Rhodes, the first Australian Military female air traffic controller to serve in Baghdad during the second Gulf War. The book also contains little known accounts of women such as Nurse Ethel Gillingham, one of the only Australian women to be a POW in WWI, and the group of Australian teachers sent to South Africa during the Boer War to work in the internment (concentration) camps.

Achilles in Vietnam

An original and groundbreaking book that examines the psychological devastation of war by comparing the soldiers of Homer's Iliad with Vietnam veterans suffering from post-traumatic stress disorder. In this moving, dazzlingly creative book, Dr. Shay examines the psychological devastation of war by comparing the soldiers of Homer's Iliad with Vietnam veterans suffering from post-traumatic stress disorder. A classic of war literature that has as much relevance as ever in the wake of the wars in Iraq and Afghanistan, it is a "transcendent literary adventure" (The New York Times) and "clearly one of the most original and most important scholarly works to have emerged from the Vietnam War" (Tim O'Brien, author of The Things They Carried).

Public Affairs

United States Army in Vietnam. CMH Pub. 91-13. Draws upon previously unavailable Army and Defense Department records to interpret the part the press played during the Vietnam War. Discusses the roles of the following in the creation of information policy: Military Assistance Command's Office of Information in Saigon; White House; State Department; Defense Department; and the United States Embassy in Saigon.

Assessment of Long-Term Health Effects of Antimalarial Drugs When Used for Prophylaxis

Among the many who serve in the United States Armed Forces and who are deployed to distant locations around the world, myriad health threats are encountered. In addition to those associated with the disruption of their home life and potential for combat, they may face distinctive disease threats that are specific to the locations to which they are deployed. U.S. forces have been deployed many times over the years to areas in which malaria is endemic, including in parts of Afghanistan and Iraq. Department of Defense (DoD) policy requires that antimalarial drugs be issued and regimens adhered to for deployments to malaria-endemic areas. Policies directing which should be used as first and as second-line agents have evolved over time based on new data regarding adverse events or precautions

for specific underlying health conditions, areas of deployment, and other operational factors At the request of the Veterans Administration, Assessment of Long-Term Health Effects of Antimalarial Drugs When Used for Prophylaxis assesses the scientific evidence regarding the potential for long-term health effects resulting from the use of antimalarial drugs that were approved by FDA or used by U.S. service members for malaria prophylaxis, with a focus on mefloquine, tafenoquine, and other antimalarial drugs that have been used by DoD in the past 25 years. This report offers conclusions based on available evidence regarding associations of persistent or latent adverse events.

The Mayaguez Crisis, Mission Command, and Civil-military Relations

Preface -- Abbreviations -- Key figures in the Mayaguez Crisis -- Introduction -- Day one: Monday, May 12 -- Day two: Tuesday, May 13 -- Day three: Wednesday, May 14 -- Day four: Thursday, May 15 -- Critical crisis decisions -- Explaining decisions, behaviors and outcomes -- Refining the explanation: rationality, bureaucracy and beliefs -- Findings, issues, prescriptions -- Conclusion.

Providing for the Casualties of War

War has always been a dangerous business, bringing injury, wounds, and death, and--until recently--often disease. What has changed over time, most dramatically in the last 150 or so years, is the care these casualties receive and who provides it. This book looks at the history of how humanity has cared for its war casualties and veterans, from ancient times through the aftermath of World War II.

Disaster On Green Ramp: The Army's Response

Features the electronic book "Disaster on Green Ramp: The Army's Response" by Mary Ellen Condon-Rall of the Center of Military History in Washington, D.C. Discusses a plane crash and massive fire at Pope Air Force Base, North Carolina, that killed or injured more than 100 paratroopers in 1994.

The Savage Shore

For centuries before the arrival in Australia of Captain Cook and the so-called First Fleet in 1788, intrepid seafaring explorers had been searching, with varied results, for the fabled "Great Southland." In this enthralling history of early discovery, Graham Seal offers breathtaking tales of shipwrecks, perilous landings, and Aboriginal encounters with the more than three hundred Europeans who washed up on these distant shores long before the land was claimed by Cook for England. The author relates dramatic, previously untold legends of survival gleaned from the centuries of Dutch, Spanish, Portuguese, French, and Indonesian voyages to Australia, and debunks commonly held misconceptions about the earliest European settlements: ships of the Dutch East Indies Company were already active in the region by the early seventeenth century, and the Dutch, rather than the English, were probably the first European settlers on the continent.

Tactical and Materiel Innovations

The interwoven futures of humanity and our planet are under threat. Urgent action, taken together, is needed to change course and reimagine our futures.

Reimagining our futures together

Includes a foreword by Major General David A. Rubenstein. From the editor: "71F, or "71 Foxtrot," is the AOC (area of concentration) code assigned by the U.S. Army to the specialty of Research Psychology. Qualifying as an Army research psychologist requires, first of all, a Ph.D. from a research (not clinical) intensive graduate psychology program. Due to their advanced education, research psychologists receive a direct commission as Army officers in the Medical Service Corps at the rank of captain. In terms of numbers, the 71F AOC is a small one, with only 25 to 30 officers serving in any given year. However, the 71F impact is much bigger than this small cadre suggests. Army research psychologists apply their extensive training and expertise in the science of psychology and social behavior toward understanding, preserving, and enhancing the health, well being, morale, and performance of Soldiers and military families. As is clear throughout the pages of this book, they do this in many ways and in many areas, but always with a scientific approach. This is the 71F advantage: applying the science of psychology to understand the human dimension, and developing programs, policies, and products to benefit the person in military operations. This book grew out of the April 2008 biennial conference of U.S. Army Research Psychologists, held in Bethesda, Maryland. This meeting was to be my last as

Consultant to the Surgeon General for Research Psychology, and I thought it would be a good idea to publish proceedings, which had not been done before. As Consultant, I'd often wished for such a document to help explain to people what it is that Army Research Psychologists "do for a living." In addition to our core group of 71Fs, at the Bethesda 2008 meeting we had several brand-new members, and a number of distinguished retirees, the "grey-beards" of the 71F clan. Together with longtime 71F colleagues Ross Pastel and Mark Vaitkus, I also saw an unusual opportunity to capture some of the history of the Army Research Psychology specialty while providing a representative sample of current 71F research and activities. It seemed to us especially important to do this at a time when the operational demands on the Army and the total force were reaching unprecedented levels, with no sign of easing, and with the Army in turn relying more heavily on research psychology to inform its programs for protecting the health, well being, and performance of Soldiers and their families."

The 71F Advantage

These memoirs will give insight into the joys and sorrows, the feeling of isolation and the camaraderie of the October 1967 to October 1968 Australian Civilian Medical team in Long Xuyen, An Giang Province, South Vietnam.

An Australian Surgical Team in Vietnam

This volume of the Textbook of Military Medicine addresses the delivery of mental health services during wartime. The foreseeable future of the U.S. military includes the potential for involvement in a variety of conflicts, ranging from peace-keeping missions to massive deployments of personnel and materiel and possible nuclear, biological, and chemical threats as was seen in the Persian Gulf War. The medical role in wartime is critical to success of the mission. For the mental health disciplines, this role encompasses identification and elimination of unfit personnel, improvement of marginal personnel to standards of acceptability, prevention of psychiatric casualties, and their treatment when prevention fails. All of these efforts must be guided by past experience and sound principles of human behavior.

A Soldier Returns

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1878. Excerpt: ... A REVIEW OF THE PAST AND PRESENT TREATMENT OF INFLAMED JOINTS. "The other method whereby, in my opinion, the art of medicine may be advanced, turns chiefly upon what follows, viz., that there must be some fixed, definite, and consummate Methodus Medendi, of which the commonweal may have the advantage. By FIXED, DEFINITE, and CONSUMMATE, I mean a line of practice which has been based and built upon a sufficient number of experiments, and has in that manner been proved competent to the cure of this or that disease. I by no means am satisfied with the record of a few successful operations, either of the doctor or the drug. I require that they be shown to succeed universally, or at least under such and such circumstances. For I contend that we ought to be equally sure of overcoming such and such diseases by satisfying such and such intentions, as we are of satisfying those same intentions by the application of such and such sorts of remedies; a matter in which we generally (although not, perhaps, always) can succeed. To speak in the way of illustration, we attain our ends when we produce stools by senna, or sleep by opium. I am far from denying that a physician ought to attend diligently to particular cases in respect to the results both of the method and of the remedies which he employs in the cure of disease. I grant, too, that he may lay up his experiences for use, both in the way of easing his memory and of seizing suggestions. By so doing he may gradually increase in medical skill, so that eventually, by a long continuance and a frequent repetition of his experiments, he may lay down and prescribe for himself a METHODUS Medendi, from which, in the cure of this or that disease, he need not deviate a single straw's breadth. Nevertheless, the publication o...

Oral Health in America

While indigenous peoples make up around 370 million of the world's population – some 5 per cent – they constitute around one-third of the world's 900 million extremely poor rural people. Every day, indigenous communities all over the world face issues of violence and brutality. Indigenous peoples are stewards of some of the most biologically diverse areas of the globe, and their biological and cultural wealth has allowed indigenous peoples to gather a wealth of traditional knowledge which is of immense value to all humankind. The publication discusses many of the issues addressed by the Declaration on the Rights

of Indigenous Peoples and is a cooperative effort of independent experts working with the Secretariat of the Permanent Forum on Indigenous Issues. It covers poverty and well-being, culture, environment, contemporary education, health, human rights, and includes a chapter on emerging issues.

Compassion and Courage

The report presents the latest assessment of global trends in wildlife crime. It includes discussions on illicit rosewood, ivory, rhino horn, pangolin scales, live reptiles, tigers and other big cats, and European eel. The COVID-19 (coronavirus) pandemic has highlighted that wildlife crime is a threat not only to the environment and biodiversity, but also to human health, economic development and security. Zoonotic diseases - those caused by pathogens that spread from animals to humans - represent up to 75% of all emerging infectious diseases. Trafficked wild species and the resulting products offered for human consumption, by definition, escape any hygiene or sanitary control, and therefore pose even greater risks of infection.

War Psychiatry

'Brilliant...wild and exhilarating' New Yorker Sgt Raymond Shaw is a hero of the first order. He's an ex-prisoner of war who saved the life of his entire outfit, a winner of the Congressional Medal of Honor, the stepson of an influential senator...and the perfect assassin. Brainwashed during his time as a POW he is a 'sleeper', a living weapon to be triggered by a secret signal. He will act without question, no matter what order he is made to carry out. To stop Shaw, his former commanding officer must uncover the truth behind a twisted conspiracy of torture, betrayal and power that will lead both to the highest levels of the government. - and to Shaw's own past...

Diseases of the Hip, Knee, and Ankle Joints

The study edition of book the Los Angeles Times called, "The most extensive review of U.S. intelligence-gathering tactics in generations." This is the complete Executive Summary of the Senate Intelligence Committee's investigation into the CIA's interrogation and detention programs -- a.k.a., The Torture Report. Based on over six million pages of secret CIA documents, the report details a covert program of secret prisons, prisoner deaths, interrogation practices, and cooperation with other foreign and domestic agencies, as well as the CIA's efforts to hide the details of the program from the White House, the Department of Justice, the Congress, and the American people. Over five years in the making, it is presented here exactly as redacted and released by the United States government on December 9, 2014, with an introduction by Daniel J. Jones, who led the Senate investigation. This special edition includes: • Large, easy-to-read format. • Almost 3,000 notes formatted as footnotes, exactly as they appeared in the original report. This allows readers to see obscured or clarifying details as they read the main text. • An introduction by Senate staffer Daniel J. Jones who led the investigation and wrote the report for the Senate Intelligence Committee, and a forward by the head of that committee, Senator Dianne Feinstein.

State of the World's Indigenous Peoples

Like sharks, epidemic diseases always lurk just beneath the surface. This fast-paced history of their effect on mankind prompts questions about the limits of scientific knowledge, the dangers of medical hubris, and how we should prepare as epidemics become ever more frequent. Ever since the 1918 Spanish influenza pandemic, scientists have dreamed of preventing catastrophic outbreaks of infectious disease. Yet, despite a century of medical progress, viral and bacterial disasters continue to take us by surprise, inciting panic and dominating news cycles. From the Spanish flu and the 1924 outbreak of pneumonic plague in Los Angeles to the 1930 'parrot fever' pandemic and the more recent SARS, Ebola, and Zika epidemics, the last 100 years have been marked by a succession of unanticipated pandemic alarms. Like man-eating sharks, predatory pathogens are always present in nature, waiting to strike; when one is seemingly vanquished, others appear in its place. These pandemics remind us of the limits of scientific knowledge, as well as the role that human behaviour and technologies play in the emergence and spread of microbial diseases.

World Wildlife Crime Report 2020

Winner of the Prime Minister's Prize for Australian History For the first time, ASIO has opened its archives to an independent historian. With unfettered access to the records, David Horner tells the real

story of Australia's domestic intelligence organisation, from shaky beginnings to the expulsion of Ivan Skripov in 1963. From the start, ASIO's mission was to catch spies. In the late 1940s, the top secret Venona program revealed details of a Soviet spy ring in Australia, supported by leading Australian communists. David Horner outlines the tactics ASIO used in counterespionage, from embassy bugging to surveillance of local suspects. His research sheds new light on the Petrov Affair, and details incidents and activities that have never been revealed before. This authoritative and ground-breaking account overturns many myths about ASIO, and offers new insights into broader Australian politics and society in the fraught years of the Cold War. The Spy Catchers is the first of three volumes of The Official History of ASIO. 'The Spy Catchers is a fascinating account of ASIO's early years when the main threat Australia faced was from the Soviet regime.' - The Hon. John Howard, OM, AC, former Prime Minister of Australia 'This is one of our most important official histories.' - The Hon. Kim Beazley, AC, Australian Ambassador to the United States of America

The Manchurian Candidate

"Advice and Support: The Early Years, 1941-1960" describes the activities of the U.S. Army in Vietnam during World War II, military advice and assistance to the French government during the immediate postwar years, and the advisory program that developed after the Geneva Agreements of 1954. Its scope ranges from high-level policy decisions to low-echelon advisory operations in the field, presented against a background of relevant military and political developments. Useful not only as a study of military assistance but as a view of the Army as an agent of national policy, Ronald Spector's interesting book is a fitting introduction to the overall study of the conflict in Vietnam.

In the Ocean's Dark Embrace

This resource is written for health professionals working with Aboriginal and Torres Strait Islander people experiencing social and emotional wellbeing issues and mental health conditions. It provides information on the issues influencing mental health, good mental health practice, and strategies for working with specific groups. Over half of the authors in this second edition are Indigenous people themselves, reflecting the growing number of Aboriginal and Torres Strait Islander experts who are writing and adding to the body of knowledge around mental health and associated areas.

The Senate Intelligence Committee Report on Torture (Academic Edition)

Om sundhedstjeneste ved US Army i Vietnamkrigen ved og bag fronten. Der er lagt vægt på behandlingen af de for amerikanerne hidtil ukendte tropesygdomme, samt på neuroser og psykoser. Adskillige skemaer med statistiske og organisatoriske data.

The Pandemic Century

The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

The Spy Catchers

Lessons of the Vietnam War covers all facets of the war from a diversity of perspectives. It teaches students how to think critically about conflict resolution in international relations. -- Teaches students how to reason ethically about moral choices. -- Sensitizes students to cultural differences. -- Written, reviewed and classroom tested by a nationwide network of Vietnam War scholars, teachers and veteran. -- Over 200 illustrations -- Discussion questions in all units.
