Ecological Succession - Ecological Succession by By: Rachel Taylor 37,118 views 3 years ago 3 minutes, 9 seconds - Ecosystems with high levels of biodiversity remain stable over long periods of time. However, **environmental**, changes and ...

Can ecosystems recover from disturbances?

Ecological Succession- the growth of a stable ecosystem over time

Ecosystems can rebuild after a disturbance by the process of ecological succession

Organisms can only establish themselves in an ecosystem if the environmental conditions are suitable for their needs

Let's track the growth of the producer population over time and see how each stage of ecological succession modifies the environment

Over time, decomposers break down the dead trees and regenerate soil

This makes the environment suitable for simple producers such as moss and grass

As the soil continues to regenerate, the environmental conditions are suitable for larger producers.

Bushes and shrubs begin to grow in the ecosystem

The environment is now suitable for larger herbivores and small carnivores

Trees begin to grow providing food, shelter, and habitat for more species

A variety of tree species becomes well established, and biodiversity is high. The ecosystem, now fully recovered, is called a "climax community"

During each stage of ecological succession biodiversity increases

During each stage of ecological succession, stability increases
