#### Sustainable Development of Smart Cities Infrastructure (SDSCI-2023) (Volume-1)

Sustainable development of smart cities infrastructures is of paramount importance and need to be planned, designed, constructed, operated and de-commissioned in a manner that ensures economic, social, environmental and institutional sustainability over the entire infrastructure life cycle. Smart cities infrastructure however be cost effective, disaster resilient, environmentally friendly, conserving natural resources, and sustainable ensuring faster delivery of quality and durable structures which include roads, building, bridges, energy and water infrastructures. Government of India is going to encourage Public Private Partnership (PPP) as an alternate option to build most of the infrastructures, which can be useful both for green-field as well as brown-field smart cities projects. The present book is a collection of contributed research and review papers presented at the 'National Conference on Sustainable Development of Smart Cities Infrastructure' (SDSCI-2023) held at National Institute of Technology, Kurukshetra in May 2023. The subject matter is grouped into nine sessions which include research articles pertaining to sustainable development of smart cities, urban and rural planning, transportation, built environment and management, sustainable and smart technologies, materials, construction and maintenance, advance modelling, characterization of structures, energy and environment, perfor-

mance of smart cities infrastructure under extreme loading conditions, green buildings, structural health monitoring, and ICT in smart cities, data mining and machine learning for sustainable infrastructure, GIS and remote sensing, future trends and prospects of smart cities, innovative technologies, building energy and efficiency and sobriety, and sustainable resilience to natural and man-made disasters, and smart materials, etc. The book would be a valuable reference for researchers, students, structural designers, site engineers, and all related engineers involved in the field of sustainable development of smart cities infrastructure.

#### Foods & Nutrition Encyclopedia, 2nd Edition, Volume 1

Foods and Nutrition Encyclopedia, 2nd Edition is the updated, expanded version of what has been described as a "monumental, classic work." This new edition contains more than 2,400 pages; 1,692 illustrations, 96 of which are full-color photographs; 2,800 entries (topics); and 462 tables, including a table of 2,500 food compositions. A comprehensive index enables you to find information quickly and easily.

#### Proceedings of the 8th International Congress on Environmental Geotechnics Volume 1

This book gathers selected papers presented at the 8th International Congress on Environmental Geotechnics (ICEG), held on October 28 - November 1, 2018 in Hangzhou, China. The theme of the congress is "Towards a Sustainable Geoenvironment", which means meeting the needs of the present generation without compromising the ability of future generations to meet their own needs. Under this theme, the congress covers a broad range of topics and provides an excellent opportunity for academics, engineers, scientists, government officials, regulators, and planners to present, discuss and exchange notes on the latest advances and developments in the research and application of environmental geotechnics.

#### Soil Constraints on Crop Production

Globally, over two thirds of soils are affected by physical, chemical, or biological soil constraints. These constraints cause significant yield loss, and, as such, identifying appropriate management strategies is crucial to ensure future world food production. In order to help agricultural researchers and practitioners better understand soil constraint management, this book comprehensively outlines the occurrence of the major soil constraints and the most appropriate strategies to manage these for sustainable food production. Importantly, it brings together experts from major agricultural regions globally to highlight approaches with the most success in different environmental and socioeconomic regions worldwide.

#### Sustainable Agriculture and Rural Livelihoods (Vol. 1)

The interactions between the plant, soil and microbes are complex in nature. Events may be antagonistic, mutualistic or synergistic, depending upon the types of microorganisms and their association with the plant and soil in question. Multi-trophic tactics can therefore be employed to nourish plants in various habitats and growth conditions. Understanding the mechanisms of these interactions is thus highly desired in order to utilize the knowledge in an ecofriendly and sustainable way. This holistic approach to crop improvement may not only resolve the upcoming food security issues, but also

make the environment greener by reducing the chemical inputs. Plant, soil and microbe, Volume 1: Implications in Crop Science, along with the forthcoming Volume 2: Mechanisms and Molecular Interactions, provide detailed accounts of the exquisite and delicate balance between the three critical components of agronomy. Specifically, these two titles focus on the basis of nutrient exchange between the microorganisms and the host plants, the mechanism of disease protection and the recent molecular details emerged from studying this multi-tropic interaction. Together they aim to provide a solid foundation for the students, teachers, and researchers interested in soil microbiology, plant pathology, ecology and agronomy.

### The Limits to Growth

The rapid thriving of industries, conversion of agricultural land to residential areas, habitat destruction, deforestation and use of recalcitrant synthetic substances enhanced the rate of degradation of the environment. Although there are various conventional techniques for degradation and cleaning of noxious pollutants from disturbed environs, they are energy inefficient and costly to install. Bioremediation has emerged recently as an alternative and novel approach to manage and control environmental pollutants. This volume focuses explicitly on the remediation of noxious substances in stressed environs. It includes expert-contributed chapters on bio-monitoring by way of evaluating the relationship of biota with the polluted/stressed environs, sustainable plant-based degradation of noxious pollutants, and the application of biotechnologies to achieve tailored responses. Academicians, researchers, scientists and students will find this work essential for sustainable treatment of noxious pollutants. This book also serves as a core guide for training, teaching and research in conservation biology and environmental rehabilitation.

Gilbert F. White is the preeminent geographer of natural resources, hazards, and the human environment. During fifty years of professional work as civil servant, scientist, and educator, he authored numerous books and papers. This volume is the first collection of White's work, spanning his interests and career from 1934 to 1984. Individual introductions by the editors place each selection in historical perspective and assay its significance. With the companion volume, Theme from the Work of Gilbert F. White, White's writings, and the work that he inspired, are now readily accessible to all who share his concern for the stewardship of the earth.

### Bioremediation and Biotechnology, Vol 4

The French Revolution in three volumes is a historical work by French historian Hippolyte Taine. This period of far-reaching social and political upheaval in France began in 1789 with the fall of the Bastille and held the country in turbulence for the next decade. The Revolution overthrew the monarchy, established a republic, catalyzed violent periods of political turmoil, and finally culminated in a dictatorship under Napoleon. Conceived by Taine with the aim of understanding the France of his day, his work achieved originality in its use of a long perspective to analyze the causes of the French Revolution. In particular, Taine denounced the artificiality of the revolution's political constructions (the excessively abstract and rational spirit of Robespierre, for example), which, in his mind, violently contradicted the natural and slow growth of the institutions of a State. For him, the force of history is such that it is illusory to want to change a society. Thus, following the defeat of Sedan and the Commune,

Taine accuses the French Revolution of being the matrix of all evils which brought France into a cycle of decadence. It is in particular the abstraction of the philosophy of the Enlightenment which is rejected.

#### Geography, Resources and Environment, Volume 1

Under ongoing climate change, natural and cultivated habitats of major food crops are being continuously disturbed. Such condition accelerates to impose stress effects like abiotic and biotic stressors. Drought, salinity, flood, cold, heat, heavy metals, metalloids, oxidants, irradiation etc. are important abiotic stresses; and diseases and infections caused by plant pathogens viz. fungal agents, bacteria and viruses are major biotic stresses. As a result, these harsh environments affect crop productivity and its biology in multiple complex paradigms. As stresses become the limiting factors for agricultural productivity and exert detrimental role on growth and yield of the crops, scientists and researchers are challenged to maintain global food security for a rising world population. This two-volume work highlights the fast-moving agricultural research on crop improvement through the stress mitigation strategies, with specific focuses on crop biology and their response to climatic instabilities. Together with "Climate Resilient Agriculture, Vol 2: Agro-Biotechnological Advancement for Crop Production\

South Africa and the Transvaal War in eight volumes is a historical account of The Second Boer War fought between the British Empire and two independent Boer states, the South African Republic (Republic of Transvaal) and the Orange Free State, over the Empire's influence in South Africa. Initial Boer attacks were successful, and although British reinforcements later reversed these, the war continued for years with Boer guerrilla warfare, until harsh British counter-measures including a scorched earth policy brought the Boers to terms. The work is divided in eight volumes, first of which covering the period from the First Boer War to the beginning of the Second Boer War. Following six volumes deal with the Second Boer War and the last volume is dedicated to the future of South Africa after the war ended. Table of Contents: Vol. 1: From the Foundation of Cape Colony to the Boer Ultimatum of 9th Oct. 1899 Vol. 2: From the Commencement of the War to the Battle of Colenso, 15th Dec. 1899 Vol. 3: From the Battle of Colenso, 15th Dec. 1899, to Lord Roberts's Advance into the Free State, 12th Feb. 1900 Vol. 4: From Lord Roberts' Entry into the Free State to the Battle of Karree Vol. 5: From the Disaster at Koorn Spruit to Lord Roberts's Entry into Pretoria Vol. 6: From the Occupation of Pretoria to Mr. Kruger's Departure from South Africa, with a Summarized Account of the Guerilla War to March 1901 Vol. 7: The Guerilla War, from February 1901 to the Conclusion of Hostilities Vol. 8: South Africa and Its Future

The Oxford Encyclopedia of Ancient Greece and Rome is the clearest and most accessible guide to the world of classical antiquity ever produced. This multivolume reference work is a comprehensive overview of the major cultures of the classical Mediterranean world--Greek, Hellenistic, and Roman--from the Bronze Age to the fifth century CE. It also covers the legacy of the classical world and its interpretation and influence in subsequent centuries. The Encyclopedia brings the work of the best classical scholars, archaeologists, and historians together in an easy-to-use format. The articles, written by leading scholars in the field, seek to convey the significance of the people, places, and historical events of classical antiquity, together with its intellectual and material culture. Broad overviews of literature, history, archaeology, art, philosophy, science, and religion are complimented by articles on authors and their works, literary genres and periods, historical figures and events, archaeologists and archaeological sites, artists and artistic themes and materials, philosophers and philosophical schools, scientists and scientific areas, gods, heroes, and myths. Areas covered include: · Greek and Latin Literature · Authors and Their Works · Historical Figures and Events · Religion and Mythology · Art, Artists, Artistic Themes, and Materials · Archaeology, Philosophers, and Philosophical Schools · Science and Technology · Politics, Economics, and Society · Material Culture and Everyday Life

### South Africa and the Transvaal War (Vol. 1-8)

Afro-Eurasia: Assessing Sustainability focuses on the geographic area where humans originated and first began to make use of the natural world - Earth's largest landmass, stretching from Portugal in the west across the steppes of Russia and south across Africa to the Cape of Good Hope. By examining the history of human expansion, as well as 21st century pressures to address ecosystem damage across the region, international scholars and regional experts weave sustainability into core curricular subjects. The interdisciplinary coverage includes national and regional environmental histories, as well as business and commerce, migration, educational institutions, law and government, and the lifestyles of diverse populations.

### Korea South Country Study Guide Volume 1 Strategic Information and Developments

It has long been recognized that soil organic matter is the key to soil fertility. As a nutrient store it gradually provides essential elements which the soil cannot retain for long in inorganic form. It buffers growing plants against sudden changes in their chemical environment and preserves moisture in times of drought. It keeps the soil in a friable, easily penetrated physical condition, well-aerated and free draining, providing young seedlings with an excellent medium for growth. But it has another property, the nature and extent of which have been the subject of argument and controversy ever since scientists began to study the soil, and that is its ability to affect growth directly, other than by providing nutrient elements. Any one wishing to learn about these effects has been faced with a daunting mass of literature, some confusing, often contradictory, and spread through a multitude of journals. Individual aspects have been covered from time to time in reviews but there has obviously been a need for a modern authoritative text book dealing with the many facets of this subject, so the publication of this volume is timely. The editors and authors are all specialists in their fields, fully familiar with the complex nature of soil organic matter and with the particular difficulties arising in any study of its properties. Where controversies exist they have presented all sides of the argument and have highlighted areas where further work is badly needed.

Contributions by María V. Acevedo-Aquino, Consuella Bennett, Florencia V. Cornet, Stacy Ann Creech, Zeila Frade, Melissa García Vega, Ann González, Louise Hardwick, Barbara Lalla, Megan Jeanette Myers, Betsy Nies, Karen Sanderson-Cole, Karen Sands-O'Connor, Geraldine Elizabeth Skeete, and Aisha T. Spencer The world of Caribbean children's literature finds its roots in folktales and storytelling. As countries distanced themselves from former colonial powers post-1950s, the field has taken a new turn that emerges not just from writers within the region but also from those of its diaspora. Rich in language diversity and history, contemporary Caribbean children's literature offers a window into the ongoing representations of not only local realities but also the fantasies that structure the genre itself. Young adult literature entered the region in the 1970s, offering much-needed representations of teenage voices and concerns. With the growth of local competitions and publishing awards, the genre has gained momentum, providing a new field of scholarly analyses. Similarly, the field of picture books has also deepened. Caribbean Children's Literature, Volume 1: History, Pedagogy, and Publishing includes general coverage of children's literary history in the regions where the four major colonial powers have left their imprint; addresses intersections between pedagogy and children's literature in the Anglophone Caribbean; explores the challenges of producing and publishing picture books; and engages with local authors familiar with the terrain. Local writers come together to discuss writerly concerns and publishing challenges. In new interviews conducted for this volume, international authors Edwidge Danticat, Junot Díaz, and Olive Senior discuss their transition from writing for adults to creating picture books for children.

This comprehensive handbook provides a unique overview of the theory, methodologies and best practices in climate change communication from around the world. It fosters the exchange of information, ideas and experience gained in the execution of successful projects and initiatives, and discusses novel methodological approaches aimed at promoting a better understanding of climate change adaptation. Addressing a gap in the literature on climate change communication and pursuing an integrated approach, the handbook documents and disseminates the wealth of experience currently available in this field. Volume 3 of the handbook provides case studies from around the world, documenting and disseminating the wealth of experiences available.

## Berkshire Encyclopedia of Sustainability 9/10

This book provides a comprehensive overview of pedology in Ireland. It describes the main soil types of the country, their functions, ecological use, and the conditions to which they were subjected associated with management over time. In addition, it presents a complete set of data, pictures and maps, including benchmark profiles. Factors involved in soil formation are also discussed, making use of new, unpublished data and elaborations. The book was produced with the support and sponsorship of Teagasc, The Agriculture and Food Development Authority, Ireland and the Irish Environmental Protection Agency.

## Revival of Religion's Sciences (Ihya Ulum ad-din) 1-4 Vol 1

The soils are fundamental to our existence, delivering water and nutrients to plants, that feed us. But they are in many ways in danger and their conservation is therefore a most important focus for science, governments and society as a whole. A team of world recognised researchers have prepared this first English edition based on the 16th European edition. • The precursors and the processes of soil development • The physical, biological and chemical properties of soils • Nutrients and Pollutants • The various soil classifications with the main focus on the World Reference Base for Soil Resources (WRB) • The most important soils and soil landscapes of the world • Soil Evaluation Techniques • Basic Principles of Soil Conservation Whoever works with soils needs this book.

## Soil Organic Matter and Biological Activity

This handbook is a reference guide for selecting and carrying out numerous methods of soil analysis. It is written in accordance with analytical standards and quality control approaches. It covers a large body of technical information including protocols, tables, formulae, spectrum models, chromatograms and additional analytical diagrams. The approaches are diverse, from the simplest tests to the most sophisticated determination methods.
