Over the years, new IT approaches have manifested, including digital transformation, cloud computing, and the internet of things (IoT). They have had a profound impact on the population, including libraries. Many organizations can save on their IT budget by adopting these new approaches because they provide technology in easier ways, often at lower costs and to the benefit of users. Emerging Trends and Impacts of the Internet of Things in Libraries is a critical research publication that explores advancing technologies, specifically the internet of things, and their applications within library settings. Moreover, the book will provide insights and explore case studies on smart libraries. Featuring a wide range of topics such as smart technology, automation, and robotics, this book is ideal for librarians, professionals, academicians, computer scientists, researchers, and students working in the fields of library science, information and communication sciences, and information technology.

For half a century at least, I.T. teams have focused on solving business problems through computer technology - and largely ignoring the human element in their interactions with end users. In his new book I.T. IN CRISIS: A NEW BUSINESS MODEL, consultant L. Paul Ouellette shows how to bring the I.T. team into the twenty-first century. Organizations that employ I.T. professionals are facing a new economic landscape - one where closer, more engaged relationships with internal and external customers are not merely nice if you can get it, but essential for organizational survival. I.T.'s old business as usual approach - and let the relationship thing take care of itself - is, Ouellette warns, now a recipe for disaster. I.T.'s challenge is to adapt to the customer-focused operational realities of the twenty-first century. Teams that meet this challenge will thrive, and will create extraordinary opportunities for themselves and their organizations. Teams that don't, Ouellette believes, will be marginalized or phased out. How do we make this (long-overdue) transition? By upgrading the I.T. Professional's skill sets - and moving from the back room to the forefront of the business, the place where person-to-person connections with customers as human beings take place. In I.T. IN CRISIS: A NEW BUSINESS MODEL, Ouellette offers proven, real-world strategies for I.T. teams to forge closer bonds with their end users. He shows I.T. professionals how to change the way their customers think about I.T., how to improve I.T.'s standing within their own organizations, and how to enhance their own careers -Paul offers the 1 tool to turn negative relations into a positive one. Methods for successfully conducting the 3 main points of your clients' interactions, learn what clients really want from I.T. and the 5 steps to building your sustainable service strategy. Building very specific empathy, listening skills, rapport-building, and overall relationship management capacities. Ouellette also includes the case studies and action forms that will help I.T. teams to execute on the book's core concept. Today's business environment is highly competitive. In order to survive, organizations must create new business models that focus "like a laser beam: " on the customer. For those who work in Information Technology (I.T.) customer relations is no longer a "nice to have skill, but rather a "must have: " skill. The average professional Information Technologist is lacking skills in this area - and thus I.T. faces a crisis. For the

first time since the introduction of computer technology to the world of business, I.T. funding has been reduced, and investments going into computer business technology are declining. I.T. is no longer seen as the savior of a company's bottom line. This state of affairs actually represents a new opportunity for I.T. If we make a conscious decision to conduct business differently, upgrade our skills, and focus on the customer - we can get the credit, attention, and recognition we deserve. Computer technology solutions are but one part of what we offer. In the twenty-first century, we need to play a much broader role ... build stronger relationships with the people we serve ... and become an irreplaceable part of the client's business solution. Addressing the problems and offering corrective strategies facing today's I.T. professional are the sole purposes of this book. Once we do this, we will not only succeed, we will thrive! I.T. IN CRISIS: A NEW BUSINESS MODEL strategizes how to make this transition.

As the service sector expands into the global economy, a new science of service is emerging, one that is dedicated to encouraging service innovation by applying scientific understanding, engineering discipline, and management practice to designing, improving, and scaling service systems. Handbook of Service Science takes the first major steps to clarifying the definition, role, and future of this nascent field. Incorporating work by scholars from across the spectrum of service research, the volume presents multidisciplinary perspectives on the nature and theory of service, on current research and practice in design, operations, delivery, and innovation of service, and on future opportunities and potential of service research. Handbook of Service Science provides a comprehensive reference suitable for a wide-reaching audience including researchers, practitioners, managers, and students who aspire to learn about or to create a deeper scientific foundation for service design and engineering, service experience and marketing, and service management and innovation.

Since the Colombo Plan in the early 1950s, food aid has been an important and highly visible component of the Canadian development assistance program. Until the early 1970s, however, the Canadian food aid program was little more than a loosely connected collection of disparate programs designed to meet a host of sometimes conflicting objectives. In the wake of the world food crisis of 1972-75, a growing number of groups began to question the developmental effectiveness of food aid. In response, the Canadian government undertook an extensive review and assessment of its food aid program, which resulted in a series of new policy initiatives designed to change both the substance of food aid programs and the manner in which they were administered. These changes marked a watershed in the history of the Canadian food aid program, setting out the fundamental policy themes that have been consolidated and refined in the 1980s and early 1990s.

Trading, forecasting, aggregating, and innovating (the Four) are key social interactions in human life at both the individual and aggregate levels. They are part of the human fabric because they stem from mankind's peculiarities—heterogeneity, inclination to forecast, sociality, and inventiveness. But humans have multifaceted behavior, too. They are capable of having contradictory impulses towards one another, integrating and disintegrating as well as cooperating and dominating, and behaving prosocially and anti-socially. Hence, humans need to organize themselves in order to maintain, improve, and extend their social interactions as well as a safe and ordered life. Crucial intersections emerge naturally—the efficiency of humans' way of tackling the Four is a joint product of economic systems, institutions, and behaviors. All told, the main idea of this book is to include in a single tour a collection of insights on why and how humans implement the Four. The narrative highlights several connections as well as how key these businesses are as the traveler is escorted through some Four-related behavioral problems and institutional solutions that humans have been, respectively, facing and elaborating over time. Economics students may exploit this book by both inserting what they are learning from textbooks into a wider framework and enjoying some of the hints revealed by the grand social theorizing of giants such as A. Smith and J. Schumpeter. But the proposed tour may also attract outsiders to economics who are curious about disparate economic themes linked to the Four but who wish to gain an overview without engaging in longer readings.
