Lonely Planet Florence & Tuscany

Electronic open access edition funded by the National Endowment for the Humanities. Covering from 1915 to the present, this book deals with the role that artists and intellectuals have played regarding projects of European integration. Consciously or not, they partake of a tradition of Euroskepticism. Because Euroskepticism is often associated with the discourse of political elites, its literary and artistic expressions have gone largely unnoticed. This book addresses that gap. Taking Spain as a case study, author Luis Martín-Estudillo analyzes its conflict over its own Europeanness or exceptionalism, as well as the European view of Spain. He ranges from canonical writers like Unamuno, Ortega y Gasset, and Zambrano to new media artists like Valeriano López, Carlos Spottorno, and Santiago Sierra. Martín-Estudillo provides a new context for the current refugee crisis, the North-South divide

among EU countries, and the generalized disaffection toward the project of European integration. The eclipsed critical tradition he discusses contributes to a deeper understanding of the notion of Europe and its institutional embodiments. It gives resonance to the intellectual and cultural history of Europe's "peripheries" and re-evaluates Euroskeptic contributions as one of the few hopes left to imagine ways to renew the promise of a union of the European nations.

The Rise of Euroskepticism

Astrophysicist George Smoot spent decades pursuing the origin of the cosmos, "the holy grail of science," a relentless hunt that led him from the rain forests of Brazil to the frozen wastes of Antarctica. In his search he struggled against time, the elements, and the forces of ignorance and bureaucratic insanity. Finally, after years of research, Smoot and his dedicated team of Berkeley researchers succeeded in proving the unprovable—uncovering, inarguably and for all time, the secrets of the creation of the universe. *Wrinkles in Time* describes this startling discovery that would usher in a new scientific age—and win Smoot the Nobel Prize in Physics.

Lonely Planet Pocket Paris

The brilliance of the Renaissance laid the foundation of the modern world. Textbooks tell us that it came about as a result of a rediscovery of the ideas and ideals of classical Greece and Rome. But now bestselling historian Gavin Menzies makes the startling argument that in the year 1434, China--then the world's most technologically advanced civilization--provided the spark that set the European Renaissance ablaze. From that date onward, Europeans embraced Chinese intellectual ideas, discoveries, and inventions, all of which form the basis of western civilization today.--From amazon.com.

S,M,L,XL presents a selection of the remarkable visionary design work produced by the Dutch firm Office for Metropolitan Architecture (O.M.A.) and its acclaimed founder, Rem Koolhaas, in its first twenty years, along with a variety of insightful, often poetic writings. The inventive collaboration between Koolhaas and designer Bruce Mau is a graphic overture that weaves together architectural projects, photos and sketches, diary excerpts, personal travelogues, fairy tales, and fables, as well as critical essays on contemporary architecture and society. The book's title is also its framework: projects and essays are arranged according to scale. While Small and Medium address issues ranging from the domestic to the public, Large focuses on what Koolhaas calls "the architecture of Bigness." Extra-Large features projects at the urban scale, along with the important essay "What Ever Happened to Urbanism?" and other studies of the contemporary city. Running throughout the book is a "dictionary" of an adventurous new Koolhaasian language -- definitions, commentaries, and quotes from hundreds of literary, cultural, artistic, and architectural sources.

Reconsidering Localism

"Localism" has been deployed in recent debates over planning law as an anodyne, grassroots way to shape communities into sustainable, human-scale neighborhoods. But "local" is a moving category, with contradictory, nuanced dimensions. *Reconsidering Localism* brings together new scholarship from leading academics in Europe and North America to develop a theoretically-grounded critique and definition of the new localism, and how it has come to shape urban governance and urban planning. Moving beyond the UK, this book examines localism and similar shifts in planning policy throughout Europe, and features essays on localism and place-making, sustainability, social cohesion, and citizen participation in community institutions. It explores how debates over localism and citizen control play out at the neighborhood, institutional and city level, and has come to effect the urban landscape throughout Europe. *Reconsidering Localism* is a current, vital addition to planning scholarship.

Planning for Small Town Change

Change is inevitable in all communities: they both grow and decline. Planning is a means by which we have sought to manage this change. It has not always succeeded in providing the types of settlements and environments which many residents and others want, either because it is operating with the wrong policies or because it is failing to ensure that the right policies are effectively implemented. These failings have opened planning to criticism by a dominant neoliberal orthodoxy which shapes an increasingly difficult environment in which planning has to operate. *Planning for Small Town Change* builds on an underexploited selection of international research and the authors' English case studies to consider the efficacy of planning for change. Drawing on insightful small town experiences, three themes emerge: understanding and conceptualising change; appreciating the potential within place; and the mechanisms for planning and delivery. The research draws on many examples of how key actors have made a significant difference to specific places and provides important insights into how the planning process can be better matched to the long-term and complex challenges faced. Whilst small town experiences are often neglected, they are found to be particularly insightful in understanding the potential roles of local communities and the importance of place quality when planning for change.

Regent Park Redux

Regent Park Redux evaluates one of the biggest experiments in public housing redevelopment from the tenant perspective. Built in the 1940s, Toronto's Regent Park has experienced common large-scale public housing problems. Instead of simply tearing down old buildings and scattering inhabitants, the city's housing authority came up with a plan for radical transformation. In partnership with a private developer, the Toronto Community Housing Corporation organized a twenty-year, billion-dollar makeover. The reconstituted neighbourhood, one of the most diverse in the world, will offer a new mix of amenities and social services intended to "reknit the urban fabric." *Regent Park Redux*, based on a ten-year study of 52 households as they moved through stages of displacement and resettlement, examines the dreams and hopes residents have for their community and their future. Urban planners and designers across the world, in cities facing some of the same challenges as Toronto, will want to pay attention to this story.

The Routledge Handbook of Planning Theory

The *Routledge Handbook of Planning Theory* presents key contemporary themes in planning theory through the views of some of the most innovative thinkers in planning. They introduce and explore their own specialized areas of planning theory, to conceptualize their contemporary positions and to speculate how these positions are likely to evolve and change as new challenges emerge. In a changing and often unpredictable globalized world, planning theory is core to understanding how planning and its practices both function and evolve. As illustrated in this book, planning and its many roles have changed profoundly over the recent decades; so have the theories, both critical and explanatory, about its practices, values and knowledges. In the context of these changes, and to contribute to the development of planning research, this handbook identifies and introduces the cutting edge, and the new emerging trajectories, of contemporary planning theory. The aim is to provide the reader with key insights into not just contemporary planning thought, but potential future directions of both planning theory and planning as a whole. This book is written for an international readership, and includes planning theories that address, or have emerged from, both the global North and parts of the world beyond.

Insurgencies and Revolutions

Over the past six or more decades, John Friedmann has been an insurgent force in the field of urban and regional planning, transforming it from its traditional state-centered concern for establishing social and spatial order into a radical domain of collaborative action between state and civil society for creating 'the good society' in the present and future. By opening it up to theoretical engagement with a wide range of disciplines, Friedmann's contributions have revolutionised planning as a transdisciplinary space of critical thinking, social learning, and reflective practice. *Insurgencies and Revolutions* brings together former students, close research associates, and colleagues of John Friedmann to reflect on his contributions to planning theory and practice. The volume is organized around five broad themes where Friedmann's contributions have risen to challenge established paradigms and generated the space for revolutionary thinking and action in urban and regional planning – Theorising hope; Economic development and regionalism; World cities and the Good city; Social learning, empowered communities, and citizenship; and Chinese cities. The essays by the authors reflect their engagement with his ideas and the new directions in which they have taken these in their work in planning theory and practice.

Public Norms and Aspirations

The aspirations of individuals, organizations, and states, and their perceptions of problems and possible solutions circulate fast in this instantaneous society. Yet, the deliberation of the underlying public norms seems to escape the attention of the public. Institutions enable people to have reliable expectations of one another even when they are unsure of each other's aspirations and purposes. Public norms enable people to act under conditions of increasing uncertainty. To fulfill this role in society, institutions need enhancement, maintenance, and innovation. *Public Norms and Aspirations* aims to improve the methodology of planning research and practice by exploring the co-evolution of institutional innovation and the philosophy of pragmatism in processes of action. As most attention in planning research and planning practices goes to the pragmatic approaches of aspirations and problem solving, the field is awaiting an upgrade of institutional perspectives. This book aims to explore the interaction of institutional and pragmatic thought and to suggest how these two approaches might be integrated and applied in successful planning research. Searching this combination at the interface of sociology, planning, and law, Salet opens a unique niche in the existing planning literature.

Planning and Conflict

Planning and Conflict discusses the reasons for conflicts around urban developments and analyzes their shape in contemporary cities. It offers an interdisciplinary framework for scholars to engage with the issue of planning conflicts, focusing on both empirical and theoretical inquiry. By reviewing different perspectives for planners to engage with conflicts, and not simply mediate or avoid them, *Planning and Conflict* provides a theoretically informed look forward to the future of engaged, responsive city development that involves all its stakeholders.

Planning for Growth

Planning for Growth: Urban and Regional Planning in China provides an overview of the changes in China's planning system, policy, and practices using concrete examples and informative details in language that is accessible enough for the undergraduate but thoroughly grounded in a wealth of research and academic experience to support academics. It is the first accessible text on changing urban and regional planning in China under the process of transition from a centrally planned socialist economy to an emerging market in the world. Fulong Wu, a leading authority on Chinese cities and urban and regional planning, sets up the historical framework of planning in China including its foundation based on the proactive approach to economic growth, the new forms of planning, such as the 'strategic spatial plan' and 'urban cluster plans', that have emerged and stimulated rapid urban expansion and transformed compact Chinese cities into dispersed metropolises. And goes on to explain the new planning practices that began to pay attention to eco-cities, new towns and new development areas. *Planning for Growth: Urban and Regional Planning in China* demonstrates that planning is not necessarily an 'enemy of growth' and plays an important role in Chinese urbanization and economic growth. On the other hand, it also shows planning's limitations in achieving a more sustainable and just urban future.

Effective Practice in Spatial Planning

After years of being regarded as a regulatory tool, spatial planning is now a key agent in delivering better places for the future. Dealing with the role of spatial planning in major change such as urban extensions or redevelopment, this book asks how it can deliver at the local level. Setting out the new local governance within which spatial planning now operates and identifying the requirements of successful delivery, this book also provides an introduction to project management approaches to spatial planning. It details what the rules are for spatial planning, the role of evidence and public involvement in delivering the local vision and how this works as part of coherent and consistent sub-regional approach. The conclusion is a forward look at what is likely to follow the effective creation of inspiring and successful places using spatial planning as a key tool.

Design of Urban Space

Madanipour draws together the major themes in urban design today - uncertainty regarding nature and scope, increased demand for courses in urban design, and increased demand for research into the subject.

Strategic Spatial Projects

Strategic Spatial Projects presents four years of case study research and theoretical discussions on strategic spatial projects in Europe and North America. It takes the position that planning is not well equipped to take on its current challenges if it is considered as only a regulatory and administrative activity. There is an urgent need to develop a mode of planning that aims to innovate in spatial as well as social terms. This timely, important book is for spatial planning, urban design and community development and policy studies courses. For academics, researchers and students in planning, urban design, urban studies, human and economic geography, public administration and policy studies.

Politics, Planning and Homes in a World City

This is an insightful study of spatial planning and housing strategy in London, focusing on the period 2000-2008 and the Mayoralty of Ken Livingstone. Duncan Bowie presents a detailed analysis of the development of Livingstone's policies and their consequences. Examining the theory and practice of spatial planning at a metropolitan level, Bowie examines the relationships between: planning, the residential development market and affordable housing environmental, economic and equity objectives national, regional and local planning agencies and their policies. It places Livingstone's Mayoralty within its historical context and looks forward to the different challenges faced by Livingstone's successors in a radically changed political and economic climate. Clear and engaging, this critical analysis provides a valuable resource for academics and their students as well as planning, housing and development professionals. It is essential reading for anyone interested in politics and social change in a leading 'world city' and provides a base for parallel studies of other major metropolitan regions.

Cohesion, Coherence, Cooperation: European Spatial Planning Coming of Age?

Since its foundation the European Union has gradually developed policies that are aimed at achieving increased economic and social cohesion. This book examines the most recent of these, the concept of territorial cohesion. Territorial cohesion is the pursuit of balanced development, competitiveness, sustainable development, and good governance. These concerns are most readily addressed by the formulation of spatial strategies under the umbrella of spatial planning, that brings together a multitude of public and private actors in a process that requires cohesion, coherence and co-operation. This book traces the development of spatial planning at European level and argues that spatial planning can become a vehicle, not only for territorial cohesion, but for EU policy generally.

Urban Planning and Real Estate Development

This book is a comprehensive treatment of the twin processes of planning and development and is the only book to bring the two fields together in a single text.

A Future for Planning

As well as being spatial, planning is necessarily also about the future – and yet time has been relatively neglected in the academic, practice and policy literature on planning. Time, in particular the need for longer-term thinking, is critical to responding effectively to a range of pressing societal challenges from climate change to an ageing population, poor urban health to sustainable economic development.

This makes the relative neglect of time not only a matter of theoretical importance but also increasing practical and political significance. *A Future for Planning* is an accessible, wide-ranging book that considers how planning practice and policy have been constrained by short-termism, as well as by a familiar lack of spatial thinking in policy, in response to major social, economic and environmental challenges. It suggests that failures in planning often represent failures to anticipate and shape the future which go well beyond planning systems and practices; rather our failure to plan for the longer-term relates to wider issues in policy-making and governance. This book traces the rise and fall of long-term planning over the past 80 years or so, but also sets out how planning can take responsibility for twenty-first century challenges. It provides examples of successes and failures of longer-term planning from around the world. In short, the book argues that we need to put time back into planning, and develop forms of planning which serve to promote the sustainability and wellbeing of future generations.

Retail Location Planning in an Era of Multi-Channel Growth

The way in which products and services are delivered to consumers, through branches and retail outlets, or more generally through a network of distribution channels, remains fundamentally important for maintaining a competitive advantage for a very wide range of businesses. This is true within domestic markets, but especially so for increasingly global corporations, as shareholder pressure for continued growth drives businesses into ever more widespread geographical markets. Arguing that more complex markets demand more sophisticated spatial analysis, this book discusses the application of location planning techniques to generate competitive advantage in a variety of business sectors in a changing retail environment. The series of techniques are analysed, from relatively straightforward branch scorecards to sophisticated applications of geographical information systems (GIS), spatial modelling and mathematical optimisation. Also explored are the changing dynamics of the impact of more restrictive planning environments in many countries on how retailers find new locations for growth and respond to changing consumer needs and wants. The book is essential reading for students and scholars alike working in geography, economics, business management, planning, finance and industry studies.

The Craft of Collaborative Planning

Unlike books that focus solely on methods, *The Craft of Collaborative Planning* provides a detailed guide to designing and managing all aspects of the collaborative process, advocating for making collaborative work the norm. Beginning with a discussion of the political and legal context of collaborative practice in UK land use planning systems, *The Craft of Collaborative Planning* tracks a path through the challenging task of process design and working with various groups and individuals. Taking into account the great need for coherent organizational approaches, Bishop outlines evaluation and learning from the collaborative process for the future. Jeff Bishop brings to his writing an exemplary career focused on bringing various parties together to generate creative and widely supported plans and projects. With its focused discussion of UK engagement practices, and detailed outline for making a better collaborative process, *The Craft of Collaborative Planning* is an essential read for practitioners and decision-makers seeking to bring communities together with creative solutions to spatial planning, design, and development.

Public and Private Spaces of the City

The relationship between public and private spheres is one of the key concerns of the modern society. This book investigates this relationship, especially as manifested in the urban space with its social and psychological significance. Through theoretical and historical examination, it explores how and why the space of human societies is subdivided into public and private sections. It starts with the private, interior space of the mind and moves step by step, through the body, home, neighborhood and the city, outwards to the most public, impersonal spaces, exploring the nature of each realm and their complex, interdependent relationships. A stimulating and thought provoking book for any architect, architectural historian, urban planner or designer.

Designing the City of Reason

With a practical approach to theory, *Designing the City of Reason* offers new perspectives on how differing belief systems and philosophical approaches impact on city design and development, exploring how this has changed before, during and after the impact of modernism in all its rationalism. Looking at the connections between abstract ideas and material realities, this book provides a social and historical

account of ideas which have emerged out of the particular concerns and cultural contexts and which inform the ways we live. By considering the changing foundations for belief and action, and their impact on urban form, it follows the history and development of city design in close conjunction with the growth of rationalist philosophy. Building on these foundations, it goes on to focus on the implications of this for urban development, exploring how public infrastructures of meaning are constructed and articulated through the dimensions of time, space, meaning, value and action. With its wide-ranging subject matter and distinctive blend of theory and practice, this book furthers the scope and range of urban design by asking new questions about the cities we live in and the values and symbols which we assign to them.

Conflict, Improvisation, Governance

Conflict, Improvisation, Governance presents a carefully crafted and edited collection of first hand accounts of diverse public sector and non-profit urban practitioners facing the practical challenges of "doing democracy" in the global/local context of the interconnected major European city of Amsterdam and its region. The book examines street level democratic processes through the experiences of planning and city governance practitioners in community development, youth work, public service delivery, urban public administration, immigration and multi-cultural social policy. These profiles and case studies show widely shared challenges in global and local urban environments, and new, "bottom-up," democratic and improvisational strategies that community members and public officials alike can use to make more inclusive, democratic cities.

The New Spatial Planning

Spatial planning, strongly advocated by government and the profession, is intended to be more holistic, more strategic, more inclusive, more integrative and more attuned to sustainable development than previous approaches. In what the authors refer to as the New Spatial Planning, there is a fairly rapidly evolving maturity and sophistication in how strategies are developed and produced. Crucially, the authors argue that the reworked boundaries of spatial planning means that to understand it we need to look as much outside the formal system of practices of 'planning' as within it. Using a rich empirical resource base, this book takes a critical look at recent practices to see whether the new spatial planning is having the kinds of impacts its advocates would wish. Contributing to theoretical debates in planning, state restructuring and governance, it also outlines and critiques the contemporary practice of spatial planning. This book will have a place on the shelves of researchers and students interested in urban/regional studies, politics and planning studies.

The European Dimension of British Planning

Presents a snapshot of the UK's relationship with Europe in terms of planning during the last years of the twentieth century. The core material is based on research gathered from six case-study local authorities in Britain.

Planning Major Infrastructure

This book analyses the planning and policy world of major infrastructure as it is moving now in Europe and the UK. Have some countries managed to generate genuine consensus on how the large changes are progressed? What can we learn from the different ways countries manage these challenges, to inform better spatial planning and more intelligent political steering? Case studies of the key features of policy and planning approaches in France, Germany, the Netherlands, Spain and the UK are at the core of Planning Major Infrastructure. This includes the different regimes introduced in England and Wales, and Scotland, brought in by reforms since 2006. High speed rail, renewable energy deployment, water management, waste treatment – all raise critical planning issues. The case studies connect to the big issues of principle which haunt this field of public policy: how can democratic legitimacy be secured? How can ecological and economic transitions be managed? What is the appropriate role of the national government in each of these areas, as against other levels? What part has the EU played, and should it be involved in the future? These are some of the central themes raised in this innovating exploration of this currently high profile field.

Critical Dialogues of Urban Governance, Development and Activism

Critical Dialogues of Urban Governance, Development and Activism examines changes in governance, property development, urban politics and community activism, in two key global cities: London and Toronto.

Urban Planning Education

This book examines planning education provision and approaches globally, through a comparative and longitudinal perspective. It explores the emergence of planning education in the 20th century, with its rich variation and yet a remarkable degree of cross-fertilization. Each of the sections of the book is framed by an overview essay which has been prepared by the editors to provide the reader with a critical exposure to relevant scholarship drawing on the detailed case studies and exploratory essays on key issues in planning education. The first part of this volume focuses on the emergence of planning education programs in the twentieth century as a way to understand the current planning education environment. Then we explore how education in urban, regional and spatial planning has developed in different ways in different countries and continents. The final part of this volume aims to envision how planning can adapt and develop to remain relevant to the development of human environments in the 21st century. Urban planning education has become a pervasive practice throughout the world as urbanization and development pressures have increased over the past half century, and as demand increased for professional trained experts to guide those processes. The approaches vary widely, based in part upon the discipline from which the planning program developed as well as the context-specific challenges within the country or region where the program resides.

Instruments of Planning

Instruments of Planning: Tensions and Challenges for more Equitable and Sustainable Cities critically explores planning's instrumentality to deliver important social and environmental outcomes in neoliberal planning landscapes. Because each instrument is unique and may be tailored to its own jurisdictional needs, Instruments of Planning is a compendium of case studies from urban regions in Australia, Canada, the United States and Europe, providing readers with a collection that critically challenges the role and potential of planning instruments and instrumentality across a range of contexts. Instruments of Planning captures the political, institutional, and economic challenges that confront planning. It examines planning instruments designed to assist with strategic planning and implementation, and considers the role that technology plays in unpacking and understanding complexity in planning. Written by Rebecca Leshinsky and Crystal Legacy of RMIT University in Melbourne, Australia, this book fills the gap in planning theory about the instrumentality of planning in the neoliberal urban context. It is essential reading for students, urban researchers, policy analysts and planning practitioners.

Shaping Neighbourhoods

This substantially revised and important second edition comes at a pivotal time, with both a strong agenda of localism in planning and with public health professionals now realising the vital importance of shaping urban environments in order to reduce the burden of disease and support better health outcomes. This guide ensures you: understand the underlying principles for planning healthy and sustainable neighbourhoods and towns plan the collaborative and inclusive processes needed for multi-sectoral cooperation develop know-how and skills in matching local need with urban form discover new ways to integrate development with natural systems design places with character and recognise good urban form guide communities, and advise developers, in the creation of successful and sustainable places for living. Containing many new case studies and a wealth of new research, this new edition has benefited from previous user feedback. Shaping Neighbourhoods is the indispensable guide for bridging the gulf between theory and practice, between planning authorities, investors and communities, and between different professional perspectives. Whether you are a student faced with a local planning project; a planner, urban designer or developer involved in new development; a health authority concerned with promoting physical activity; or a community group wanting to improve your neighbourhood; this book is for you.

The London Olympics and Urban Development

As London sought to use the Olympics to achieve an ambitious programme of urban renewal in the relatively socially deprived East London it attracted global attention and sparked debate. This book provides an in-depth study of the transformation of East London as a result of the 2012 Summer Olympic and Paralympic Games. Government and event organisers use legacies of urban renewal to

justify hosting the world's leading sports mega-event, this book examines and evaluates those legacies. The London Olympics and Urban Development: the mega-event city is composed of new research, conducted by academics and policy makers. It combines case study analysis with conceptual insight into the role of a sports mega-events in transforming the city. It critically assesses the narrative of legacy as a framework for legitimizing urban changes and examines the use of this framework as a means of evaluating the outcomes achieved. This book is about that process of renewal, with a focus on the period following the 2012 Games and the diverse social, political and cultural implications of London's use of the narrative of legacy.

Naturally Challenged: Contested Perceptions and Practices in Urban Green Spaces

This book aims to understand how the wellbeing benefits of urban green space (UGS) are analysed and valued and why they are interpreted and translated into action or inaction, into 'success' and/or 'failure'. The provision, care and use of natural landscapes in urban settings (e.g. parks, woodland, nature reserves, riverbanks) are under-researched in academia and under-resourced in practice. Our growing knowledge of the benefits of natural urban spaces for wellbeing contrasts with asset management approaches in practice that view public green spaces as liabilities. Why is there a mismatch between what we know about urban green space and what we do in practice? What makes some UGS more 'successful' than others? And who decides on this measure of 'success' and how is this constituted? This book sets out to answer these and related questions by exploring a range of approaches to designing, planning and managing different natural landscapes in urban settings.

Sustainable Communities

'This book re-addresses the concepts of neighbourhood and community in a refreshing and challenging way. It will be of immense benefit, not only to town planners but also to all those professional and voluntary groups and politicians who seek to create the new communities of tomorrow' From the Foreword by Jed Griffiths, Past President of the Royal Town Planning Institute. There is widespread support for the principle of creating more sustainable communities, but much hazy, wishful-thinking about what this might mean in practice. In reality, we witness more the death of local neighbourhoods than their creation or rejuvenation, reflecting an increasingly mobile, privatized and commodified society. Sustainable Communities examines the practicalities of re-inventing neighbourhoods. It is neither an idealistic, utopian tract nor a designer's manual, but is, rather, a serious attempt to address the real issues. This collection of expert contributions: * examines the nature of local community and methods of building social capital * presents the findings of a world-wide survey of eco-neighbourhoods and eco-villages with case studies from the United Kingdom, Europe, America and Australia * develops a fresh perspective on the planning and design of neighbourhoods in urban areas, based on the eco-system approach * explores practical programmes for local resource management and the implications for community-based decision-making * provides a detailed appendix listing current eco-village and eco-neighbourhood schemes by country Written by an interdisciplinary team of social and environmental scientists, town planners and urban designers, this is a thought-provoking and important contribution to both the theory and practice of the development of sustainable communities.

Introduction to Rural Planning

Introduction to Rural Planning: Economies, Communities and Landscapes provides a critical analysis of the key challenges facing rural places and the ways that public policy and community action shape rural spaces. The second edition provides an examination of the composite nature of 'rural planning', which combines land-use and spatial planning elements with community action, countryside management and the projects and programmes of national and supra-national agencies and organisations. It also offers a broad analysis of entrepreneurial social action as a shaper of rural outcomes, with particular coverage of the localism agenda and Neighbourhood Planning in England. With a focus on accessibility and rural transport provision, this book examines the governance arrangements needed to deliver integrated solutions spanning urban and rural places. Through an examination of the ecosystem approach to environmental planning, it links the procurement of ecosystem services to the global challenges of habitat degradation and loss, climate change and resource scarcity and management. A valuable resource for students of planning, rural development and rural geography, Introduction to Rural Planning aims to make sense of current rural challenges and planning approaches, evaluating the currency of the 'rural' label in the context of global urbanisation, arguing that rural spaces are relational spaces characterised by critical production and consumption tensions.

Creating Great Places

How social media and DIY communities have enabled new forms of political participation that emphasize doing and making rather than passive consumption. Today, DIY—do-it-yourself—describes more than self-taught carpentry. Social media enables DIY citizens to organize and protest in new ways (as in Egypt's "Twitter revolution" of 2011) and to repurpose corporate content (or create new user-generated content) in order to offer political counternarratives. This book examines the usefulness and limits of DIY citizenship, exploring the diverse forms of political participation and "critical making" that have emerged in recent years. The authors and artists in this collection describe DIY citizens whose activities range from activist fan blogging and video production to knitting and the creation of community gardens. Contributors examine DIY activism, describing new modes of civic engagement that include Harry Potter fan activism and the activities of the Yes Men. They consider DIY making in learning, culture, hacking, and the arts, including do-it-yourself media production and collaborative documentary making. They discuss DIY and design and how citizens can unlock the black box of technological infrastructures to engage and innovate open and participatory critical making. And they explore DIY and media, describing activists' efforts to remake and reimagine media and the public sphere. As these chapters make clear, DIY is characterized by its emphasis on "doing" and making rather than passive consumption. DIY citizens assume active roles as interventionists, makers, hackers, modders, and tinkerers, in pursuit of new forms of engaged and participatory democracy. DIY Citizenship

Providing students and practitioners with a detailed overview of the key theoretical and applied issues, this book is a comprehensive and integrated primer on regeneration. The various chapters: review the history and context of urban regeneration; consider funding implications; look at environmental, social and community issues, as well as employment, education and training; focus on managing urban regeneration; consider land use issues; and discuss monitoring and evaluation. The book concludes with a comparative analysis, with examples from America and Europe, and a discussion of future trends. The book represents the first systematic overview of urban regeneration in one volume and is set to become the standard reference

Urban Regeneration

Traditionally, landscape planning has involved the designation and protection of exceptional countryside. However, whilst this still remains important, there is a growing recognition of the multi-functionality of rural areas, and the need to encourage sustainable use of the whole countryside rather than just its 'hotspots'. With an inter-disciplinary assessment of the rural environment, this book draws on theories of landscape values, people-place relationships, sustainable development, and plan implementation. It focuses on the competing influences of globalization and localization, seeing the role of planning as the reconciliation of these conflicting demands, reinforcing character and distinctiveness without museum-izing rural areas. Taking a 'landscape scale' approach to the topic, this book responds to the interest sparked by concern for rural landscapes and by recent local and national policy shifts in this area.

Planning at the Landscape Scale

Theory without practice is empty, practice without theory is blind, to adapt a phrase from Immanuel Kant. The sentiment could not be truer of cultural heritage ethics. This intra-disciplinary book bridges the gap between theory and practice by bringing together a stellar cast of academics, activists, consultants, journalists, lawyers, and museum practitioners, each contributing their own expertise to the wider

debate of what cultural heritage means in the twenty-first century. Cultural Heritage Ethics provides cutting-edge arguments built on case studies of cultural heritage and its management in a range of geographical and cultural contexts. Moreover, the volume feels the pulse of the debate on heritage ethics by discussing timely issues such as access, acquisition, archaeological practice, curatorship, education, ethnology, historiography, integrity, legislation, memory, museum management, ownership, preservation, protection, public trust, restitution, human rights, stewardship, and tourism. This volume is neither a textbook nor a manifesto for any particular approach to heritage ethics, but a snapshot of different positions and approaches that will inspire both thought and action. Cultural Heritage Ethics provides invaluable reading for students and teachers of philosophy of archaeology, history and moral philosophy – and for anyone interested in the theory and practice of cultural preservation.

English Regional Planning 2000-2010 chronicles a vital feature of recent UK planning activity, during the period of the Blair and Brown Labour governments up to 2010. It deals particularly with the regional scale of planning during these years, whereby large steps forward were made, but where policy making often proved very controversial. One purpose of the book is to learn from the many areas of policy development, method and skills which evolved during the decade up to 2010. This will mean that a future return to strategic planning should not have to reinvent the wheel. This book also helps to inform such planning in the rest of the developed world where higher-level planning is more prevalent. The book has eight chapters written by experts active in English regional planning during these years, alongside two chapters by the editors introducing and concluding on the experience as a whole. Thematic topics covered include the way in which housing and employment development was tackled in the varying English regional contexts, and the growing influence of transport and environmental factors on the spatial strategy. Process elements covered include how policy was made through public consultation and working with numerous stakeholders (economic, social, environmental), how the public examination of issues was organised, followed by final consideration by central government, and how monitoring informed the next policy review. The authors do not gloss over the difficulties encountered in the highly contested world of English local and regional politics, or the ways in which central government management of the regional planning process made life on the ground difficult for those engaged in the process. Nevertheless the account as a whole shows how a wealth of innovative and forward looking practices were developed. This multi-faceted study contributes to the understanding of how strategic planning can provide the framework for guiding spatial change and allocating resources, looking to a long-term sustainable future.

This clear and concise guide is the ideal introduction to contemporary housing design for students and professionals of architecture, urban design and planning. With the increasing commitment to sustainable design and with an ever-increasing demand for houses in urban areas, housing design has taken on a new and crucial role in urban planning. This guide introduces the reader to the key aspects of housing design, and outlines the discussion about form and planning of urban housing. Using chapter summaries and with many illustrations, it presents contemporary concerns such as energy efficient design and high density development in a clear and accessible way. It looks at practical design solutions to real urban problems and includes advice on reclamation and re-use of buildings. The guidance it presents is universally relevant. Part two of the book features current case studies that illustrate the best in high density, sustainable housing design providing the reader with design information, and design inspiration, for their own projects.

Planning Practice: Critical Perspectives from the UK provides the only comprehensive overview of contemporary planning practice in the UK. Drawing on contributions from leading researchers in the field, it examines the tools, contexts and outcomes of planning practice. Part I examines planning processes and tools, and the extent to which theory and practice diverge, covering plan-making, Development Management, planning gain, public engagement and place-making. Part II examines the changing contexts within which planning practice takes place, including privatisation and deregulation, devolution and multi-level governance, increased ethnic and social diversity, growing environmental concerns and the changing nature of commercial real estate. Part III focuses on how planning practice produces outcomes for the built environment in relation to housing, infrastructure, economic progress,

public transport and regeneration. The book considers what it means to be a reflective practitioner in the modern planning system, the constraints and opportunities that planners face in their daily work, and the ethical and political challenges they must confront.
