He first offers a complete framework for approaching and formulating green strategy, using case studies to identify potential opportunities and business benefits. Next, using real case studies, he demonstrates how to define initiatives, construct roadmaps for transforming vision into reality, and link each investment to business strategy, so businesses can accurately measure results. Olson introduces powerful business process transformation methodologies and technologies for increasing operational efficiency and reducing waste, including IBM's breakthrough Green Sigma approach. He also identifies new opportunities to drive value by "instrumenting the planet," and introduces new technologies that make this possible. Finally, Olson assesses long-term trends that will make "green business" even more crucial in the coming years.

Green to Gold

From the Publishers Weekly review: "Two experts from Yale tackle the business wake-up-call du jour-environmental responsibility-from every angle in this thorough, earnest guidebook: pragmatically, passionately, financially and historically. Though "no company the authors know of is on a truly long-term sustainable course," Esty and Winston label the forward-thinking, green-friendly (or at least green-acquainted) companies WaveMakers and set out to assess honestly their path toward environmental responsibility, and its impact on a company's bottom line, customers, suppliers and reputation. Following the evolution of business attitudes toward environmental concerns, Esty and Winston offer a series of fascinating plays by corporations such as Wal-Mart, GE and Chiquita (Banana), the bad guys who made good, and the good guys-watchdogs and industry associations, mostly-working behind the scenes. A vast number of topics huddle beneath the umbrella of threats to the earth, and many get a thorough analysis here: from global warming to electronic waste "take-back" legislation to subsidizing sustainable seafood. For the responsible business leader, this volume provides plenty of (organic) food for thought."

Becoming Part of the Solution

Green Profits covers two tightly connected topics, environmental management systems (EMS) and pollution prevention (P2), in a single volume. Authored by an environmental engineer and an economist/planner, Green Profits shows how to implement an EMS, especially ISO 14001, so that it leads to profitable pollution prevention innovations, and how to identify and implement pollution prevention measures in a sound strategic business framework. Green Profits provides the knowledge and tools for enterprise managers to achieve the benefits of both EMS and P2, and to do so in ways that fit in with existing management systems in their enterprises. Environmental management systems are planned and organized ways for an enterprise to manage its interactions with the environment, in particular those interactions that consume resources, degrade the environment, and create human health risk. Part I of Green Profits provides a thorough and practical understanding of the elements of EMSs in general and ISO 14001 in particular, tools and techniques for implementing an EMS and achieving ISO 14001 certification, and help with getting the implementation process started. Pollution prevention involves replacing process technologies that generate pollution with those that do not or that do so much less. It focuses on improving production processes to minimize waste rather than treating effluents or emissions, which add to costs. Part II of Green Profits provides tools such as step-by-step guides to conducting a P2 audit and energy and material balances for identifying P2 opportunities in an enterprise; examples of P2 practices in specific industry sectors; and a set of tools for assessing potential P2 investments from a bottom-line point of view. With this New Handbook -- · Bring your facility into compliance · Improve your corporate image · Reduce your company's environmental liabilities · Identify and save millions of dollars from pollution prevention projects This New Handbook Includes -- · A step-by-step approach to implementing ISO 14001 · A step-by-step

approach to implementing Pollution Prevention · Contains nearly 100 useful charts and tables used by the experts in establishing environmental action plans, gap analyses, establishing an Environmental Management System · Contains dozens of useful charts and calculation methods with examples for evaluating the costs and savings to your company in implementing Pollution Prevention · Dozens of industry-specific case studies that you can learn and profit from · Shows you in stepwise fashion how project financing principles and environmental cost accounting methods, when coupled with EMS can save your company money This New Handbook is unique because unlike other volumes that separately cover Environmental Management Systems and Pollution Prevention, you have it all in one single volume, written by Experts that are Practitioners.

Green Building the Ultimate Step-By-Step Guide

Why Understanding Green Business? With every new day society has become more aware of the increasing threats to the globe due to the non-environmentally friendly practices that have been occurring in the previous years. Due to the newfound awareness, people have taken greater lengths to pass laws, alter company policies and change their everyday lives to do their part in helping to preserve the environment and prevent any further damage. Rather than taking the easy route and continuing their habits, society is putting forth a consciousness effort to go out of their way to improve the environment in any way they can. As a collective force the going green movement will better the environment and allow further generations to enjoy a clean and productive world. How is Understanding Green Business structured? Dr. Tehrani and Dr. Sinha dedicate each chapter to a different aspect of "going green" in this book such as products, transportation, networking, research and energy alternatives. In addition, the authors discuss green careers and provide useful information on how to go about working at a green company. The future of the green movement and its impacts are mentioned so as to provide a potential impact of current changes in the future. It also shows a possible interpretation of how the future green movement shall be exercised. Who is this book for? This book has been created as the core textbook for Business professionals, industry practitioners, academicians and students who would like to hone their business skills, and keep up with the latest trends in Green Business. As a result, Understanding Green Business will support students pursuing a master degree in MBA, Certificate in Management or a Diploma in Management and/or Business while undergraduate students in business programs.

The growing worldwide challenge on weather extrade and sustainable improvement has brought about a paradigm shift within the Indian markets. However, the shortage of sources, ecological issues and survival are the problems which might be identified with the help of marketers. Entrepreneurship refers to the idea of growing a commercial enterprise at both national and international level. Green environmental entrepreneurship also referred to as 'ecopreneurship' is described as the system of entrepreneurship implemented on the way to create agencies clears up environmental issues and promotes function sustainably. Small and medium size establishments are the spine of country's economy because they aid in contributing to the GDP and also generate new employment avenues. Passionate marketers are the one to stock these establishments who then assemble and capitalize these establishments to make them commercially successful enterprise. The possibilities and demand for green entrepreneurship is on the rise as multiple commercial enterprises are rerouting towards ecopreneurship ; the government of India too has launched many initiatives and schemes to support ecopreneurship in India. The reason for rise in ecopreneurship is due to concern towards environmental issues like global warming, pollution, depletion of natural resources, ozone layer depletion and various other man made catastrophes that have cause caused disruption in the atmosphere. Due to a conscious awareness on saving the planet, even the consumers have now taken a greener turn to choose eco friendly products. The inclination of consumers towards green products has improved the scope for the growth of green market. This green market is a rising marketplace as it provides adequate possibilities both locally and globally to promote green design, green manufacturing, green delivery chain and plenty of other environmental benefits. The book also depicts the importance of ecopreneurship, it highlights relevant green business ideas. By following the certain laws of entrepreneurship an entrepreneur can make a big change in his/her business. There are many schemes launched by government of India to help such entrepreneurs.
