Miller & Levine Biology

A great option for low-level and inclusion classrooms, with digital support on Biology.com. Authors Ken Miller and Joe Levine deliver the same trusted, relevant content in more accessible ways! Written at a lower grade level with a reduced page count, the text offers additional embedded reading support to make biology come alive for struggling learners. Foundations for Learning reading strategies provide the tools to make content accessible for all your students.

Conservation Biology

Fred Van Dyke's new textbook, Conservation Biology: Foundations, Concepts, Applications, 2nd Edition, represents a major new text for anyone interested in conservation. Drawing on his vast experience, Van Dyke's organizational clarity and readable style make this book an invaluable resource for students in conservation around the globe. Presenting key information and well-selected examples, this student-friendly volume carefully integrates the science of conservation biology with its implications for ethics, law, policy and economics.

Biology: Teachers' Guide: The maintenance of life

Authors Kenneth Miller and Joseph Levine continue to set the standard for clear, accessible writing and up-to-date content that engages student interest. Prentice Hall Biology utilizes a student-friendly approach that provides a powerful framework for connecting the key concepts a biology. Students explore concepts through engaging narrative, frequent use of analogies, familiar examples, and clear and instructional graphics. Whether using the text alone or in tandem with exceptional ancillaries and technology, teachers can meet the needs of every student at every learning level.

Biology. Teachers' Guide 2

Imagine trying to understand an engine without visualizing its moving parts. Biological processes involve far more complex chemical reactions and components than any engine. Furthermore, the

parts work together to do many more functions than an engine which sole task is to turn a shaft. Understanding the implications of the three-dimensional coordinates for a molecule with several thousand atoms requires an understanding of, and practice with, 3D imaging. For many biologists, this means acquiring a whole new set of skills. Foundations of Structural Biology is aimed at helping the reader develop visualization skills for protein or DNA segments, while also describing the fundamental principles underlying the organization and interaction between these complex molecules. Key Features

- * Explains how to use coordinate databases and atomic coordinates of biological macromolecules
- * Teaches the skills of stereoviewing
- * Contains computer-generated stereographics
- * Describes the principles of symmetry and handedness in proteins and DNA
- * Introduces metal and lipid binding proteins and DNA-protein interactions
- * Explains the principles involved in understanding secondary and quaternary structure
- * Includes coverage of protein-metal, protein-nucleic acid, and protein-lipid interactions

Biology, Virtual Labs

This brand new series provides an accessible, lively, and comprehensive resource for students aiming for success at Foundation Tier GCSE Double Award Science. It has been written to match all the various specifications introduced in 2001.* Carefully controlled language level throughout* Special emphasis on design and layout to maximise accessibility* Frequent opportunities for students to confirm and reinforce their understanding* Numerous exam-style questions to support students in developing exam technique* End-of-chapter glossaries of terms* Revision guidance

Target Science offers an authoritative resource for GCSE that is tailor-made for students studying at Foundation Tier.

Foundations of Structural Biology

Foundations in Microbiology is an allied health microbiology text with a taxonomic approach to the disease chapters. It offers an engaging and accessible writing style through the use of case studies and analogies to thoroughly explain difficult microbiology concepts. We were so excited to offer a robust learning program with student-focused learning activities, allowing the students to manage their learning while you easily manage their assessment. Revised art and updated photos help concepts stand out. Detailed reports show how your assignments measure various learning objectives from the book (or input your own!), levels of Bloom's Taxonomy or other categories, and how your students are doing. The Talara Learning Users who purchase Connect receive access to a full online eBook version of the textbook, including SmartBook! New to SmartBook with this edition are learning resources to aid student understanding of content utilizing a variety of learning tools.

Miller & Levine Biology 2010 Foundations

The Science Foundations Extensions books form a three-volume addition to the original Science Foundations series. They provide all the extra material required for students to do well in higher-tier examinations, whilst retaining the accessible format of the foundation-tier texts. Enhanced features include:

- layout and illustrations designed and chosen to make the texts accessible
- comprehensive cross-referencing to the Foundations texts
- frequent opportunities to check understanding of each concept
- a glossary of key words, for easy reference

Answers, additional questions, practical suggestions and module tests are also included. There is also a section containing advice on how to do well in higher-tier examinations.

Biological Science

The Cambridge Lower Secondary Complete Biology Teacher Handbook offers full support to help teachers embed a solid foundation at Lower Secondary level and ensure students develop the skills required to progress to IGCSE Biology. The Handbook supports educators to teach the Biology requirements of the Cambridge Lower Secondary Science curriculum confidently. Guidance on lesson content and delivery saves time when lesson-planning, and teaching materials help to ensure that students reach their full potential. It is written by Ann Fullick, the experienced author of the Biology Student Book. This creates a consistent approach to lessons and ensures the strengths of the series are maintained across all resources. The Teacher Handbook supports the Student Book, which is at the heart of delivering the course. A supporting Workbook also provides opportunities for independent practice inside and outside the classroom.

Biology

This integrated learning solution, comprising a book and online assessment support (MyMathLabGlobal), provides tools to develop foundation numeracy and maths skills for students of the biosciences. It can be used with courses at the pure end of the spectrum to courses of a highly applied nature, such as biomedical sciences, molecular biology, microbiology, physiology and forensics. The subject coverage has been designed to support the practical as well as theoretical aspects of these courses, and is in large part set in a biological context so that students can directly see the relevance of maths skills to their main subject.

Foundations in Microbiology

What is the physics of life and why does it matter? The essays in this book probe this question, celebrating modern biology's vibrant dialog with theoretical physics — a scientific adventure in which biological understanding is enriched by physical theory without losing its own inherent traditions and perspectives. The book explores organic complexity and self-organization through research applications to embryology, cell biology, behavioral neuroscience, and evolution. The essays will excite the interest of physics students in thinking about biology's "grand challenges", in part by means of self-contained introductions to theoretical computer science, symmetry methods in bifurcation theory, and evolutionary games. Seasoned investigators in both the physical and life sciences will also find challenging ideas and applications presented in this volume. This is a Print On Demand title. We no longer stock the original but will recreate a copy for you. While all efforts are made to ensure that quality is the same as the original, there may be differences in some areas of the design and packaging. Extension Biology

Science Foundations is a new series for students of foundation tier GCSE science. The series takes the form of three students' texts - Biology, Chemistry and Physics and associated supplementary materials. The texts support all coordinated science syllabuses and are closely matched to the NEAB modular syllabus. Biology Supplementary Materials are a fully photocopiable resource for teachers and contain full answers to the questions in the students' text, suggestions for practical activities, worksheets and end of module tests.

Success Guides are powerful learning/revision tools designed to help students remember key information easier and better. The books present GCSE content in a new highly visual approach, using unique non-linear designs. Each topic is presented on a double page spread using: - Full size diagrams with integrated text - Spider diagrams - Mind Maps - Flow charts The books also contain GCSE-style questions for exam practice. Questions are carefully graded and contain a progress indicator showing degree of difficulty.

Foundation Mathematics for Biosciences

Fundamentals of Molecular Structural Biology reviews the mathematical and physical foundations of molecular structural biology. Based on these fundamental concepts, it then describes molecular structure and explains basic genetic mechanisms. Given the increasingly interdisciplinary nature of research, early career researchers and those shifting into an adjacent field often require a "fundamentals" book to get them up-to-speed on the foundations of a particular field. This book fills that niche. Provides a current and easily digestible resource on molecular structural biology, discussing both foundations and the latest advances Addresses critical issues surrounding macromolecular structures, such as structure-based drug discovery, single-particle analysis, computational molecular biology/molecular dynamic simulation, cell signaling and immune response, macromolecular assemblies, and systems biology Presents discussions that ultimately lead the reader toward a more detailed understanding of the basis and origin of disease

Collins GCSE 9-1 Revision - Aqa GCSE 9-1 Biology Foundation Practice Test Papers

Philosophers have traditionally assumed that the difference between active and passive movement could be explained by the presence or absence of an intention in the mind of the agent. This assumption has led to the neglect of many interesting active behaviors that do not depend on intentions, including the "mindless" actions of humans and the activities of non-human animals. In this book Jones offers a broad account of agency that unifies these cases. The book addresses a range of questions, including: When are movements properly attributed to whole agents, rather than to their parts? What does it mean for an agent to guide its action? What distinguishes agents from other complex systems? What is the relationship between action and adaptive behavior? And why might the study of living systems be the key to understanding agency? This book makes an important contribution to current philosophical debate on the nature and origins of agency. It defines action as a uniquely biological process and recasts human intentional action as a specialized case of a broader and more common phenomenon than has been previously assumed. Uniting findings from philosophy, cognitive science, psychology, biology, computer science, complexity theory and ethology, this book will be of interest to students and scholars working in these areas.

Science Foundations is a new series for students of foundation tier GCSE science. The series takes the form of three students' texts - Biology, Chemistry and Physics - and associated teacher's materials. The layout and language level of the texts have been carefully controlled to ensure that the science is presented in an accessible and appealing way. The texts follow a full-colour, double-page spread format with questions punctuating each page. Each spread concludes with a summary passage of the key ideas imparted in that spread. The texts support all coordinated science syllabuses as well as the NEAB modular syllabus.

Pearson Foundation Series, Biology, is a much awaited addition to the existing Foundation Series and is particularly designed for aspirants of medical entrance examinations. Each title provides authentic and class-tested content for effective preparation and competitive readiness. Conceptual clarity and gaining mastery over the art of critical thinking are the central themes and to ensure this, the series has lucid content along with neatly-sketched diagrams, illustrations, concept-maps and real-life images. These books are an indispensable companion for all aspirants aiming to succeed in key entrance examinations, like the National Eligibility cum Entrance Test (NEET), Olympiads, Kishore Vaigyanik Protsahan Yojana (KVPY), etc. The series covers classes 7 to 10.

The Wright Science Pocket Booster is designed to assist those students embarking on their GCSE Science examinations. This book has been written to cover the key facts for the first biology exam paper for the higher tier on OCR Gateway A. Inside the book, in addition to the printed notes, you also have QR codes that will take you directly to a video that supports that topic. This book is written for the

separate science GCSE Biology course. It has been written by a secondary science teacher teaching in England using the resources my students have always found to be helpful.
