throughout **ecology**,. An ecosystem is made up of all of the ...

An ecosystem is made up of all of the communities that live in it, every single organism from small to big and lots of environmental factors like sunlight and shade in the woodland, streams and other things.

A habitat is the area or environment in which an organism naturally lives - so the woodland in this example.

Whereas populations describes just one species, a community is all of the organisms in the habitat at one time.

A niche describes the role of a species within an ecosystem.

A species is a group of potentially interbreeding individuals, which do not normally reproduce with other species to produce viable, fertile offspring.
